The best German trains frequently cover long distances without stop and at high rate of speed. The record in this particular is held by the Munich-Berlin express for the run between Nuremberg and Halle, a distance of 195.11 miles, which is covered without stop at an average speed of 43.19 miles per hour, in spite of the heavy grades in crossing the Thuringian Mountains. Other long runs without stop are Berlin to Hamburg, 178.33 miles, at an average speed of 55.18 miles per hour; Munich to Wurzburg, 172.12 miles, at 50.33 miles per hour; Berlin to Hanover, 157.83 miles, at 50.39 miles per hour; Schneidemuehl to Berlin, 153.48 miles, at 50.46 miles per hour; and Breslau to Frankfort on the Oder, 154.10 miles, at 50.77 miles per hour.

The fastest long-distance trains in Germany are the Berlin-Hanover-Dortmund express, which covers 292.04 miles with but three stops, at an average speed of 50.52 miles per hour; the Oderberg-Breslau-Berlin express, 316.90 miles with four stops, at 50.14 miles per hour; the Berlin-Konigsberg express, 366.61 miles with three stops, at 49.70 miles per hour; the Munich-Berlin express, 419.42 miles with two stops, at 48.78 miles per hour; the Berlin-Frankfort on the Main express, 334.92 miles with five stops, at 48.50 miles per hour; the Munich-Wurzburg-Frankfort on the Main express, 256 miles with four stops, at 47.04 miles per hour; the Berlin-Hof-Munich express, 407 miles with four stops, at 44.93 miles per hour.

---

**Railway Construction in Turkey.**

A Reuter dispatch from Constantinople states that the Turkish Chamber on May 25 approved a convention with the Oriental Railway Co. for constructing a railway from Uskub via Kalkandele to Gostivar, about 39 miles.

---

*Pineapple packing* in Hawaii commenced at the end of May. One firm expects to put up 450,000 cases and another 330,000 cases. The pack in 1914 is expected to be 1,500,000 cases.

**FAR EASTERN TRADE NOTES.**

[From Consul General George E. Anderson, Hongkong.]

**Rattan Trade—Siamese Cotton.**

The Philippine Government is attempting to foster the production and export of rattan. Apparently there is no reason why this can not be greatly increased. The Far Eastern trade in this commodity is large, and Hongkong's output of rattan furniture is shipped all over the world. However, practically all the raw material is imported from Indo-China and the Malay States. Any increased output of the Philippines in rattan would find a market in the Far East, if not in the United States, where the use of rattan is increasing, as is shown by increasing exports of rattan thereto from Hongkong. [American imports of rattan were valued at \$884,626 in the fiscal year 1910 and at \$925,269 in 1911. This does not include rattan furniture.—B. of M.]

The scheme inaugurated something over a year ago to raise cotton on a large scale in Siam to supply Japanese cotton mills is reported as having failed of success for the time being at least. The fact that the cotton market is monopolized by Chinese middlemen is given as one reason for failure.

**Heavy Traffic—Clothing Sales.**

Space on all trans-Pacific vessels from the Puget Sound district is becoming difficult to obtain, and the mass of freight moving for Hongkong and other Far Eastern points seems to be the largest in history. Freight for United States and Canada continues in large volume in spite of disturbed conditions in South China.

Motor-boat traffic on the West River is reported as exceptionally active. The Chinese Government is arranging for an additional service of such vessels between Nanning and Lungchow and Poseh.

A Japanese hat and cap manufacturer, after a trip through the Yangtze Valley, reports that of the foreign headwear now sold to the Chinese about 70 per cent is of Japanese make, the other 30 per cent being British and German.

A traveling salesman of an English firm is said to have recently sold about \$125,000 worth of ready-made foreign clothing in Manchuria, mostly at Harbin, for sale to Chinese. In practically all parts of China native and other tailors have orders for such clothing which will keep them busy for months.

[From Consul Albert W. Pontius, Dulren.]

**Exports of Salt to Chosen.**

Owing to a dearth of fuel in the salt-manufacturing districts of Chosen (Korea) the cost of fuel in producing 100 kin (132 pounds) of salt has risen to 40 cents, leaving only about 20 cents for labor and other expenses. Salt produced in the Leased Territory of Manchuria, on the other hand, can be sold for 25 cents per 100 kin, and there are consequently prospects of a good export trade to Chosen. The Government of Chosen exercises a monopoly in the salt industry, but can supply under ordinary circumstances only 20,000,000 kin of the 360,000,000 kin consumed there annually. The salt output of the Leased Territory is about 150,000,000 kin annually of which 45,000,000 kin are shipped to Japan, leaving only 105,000,000 kin available for possible export to Chosen.

**Dairen Exports.**

Returns just issued by the South Manchuria Railway Co. wharf office show that exports from Dairen in the six months ended March 31, 1912, exclusive of Fushun coal, amounted to 486,885 tons, a decrease of 74,335 tons compared with the corresponding period of the previous year. They were composed of beans, 125,688 tons; bean cake, 273,311 tons; cereals, 14,169 tons; seeds, 15,535 tons; oils, 24,910 tons; and sundries, 33,272 tons. Most of the oil is bean oil and the life of the export trade is thus shown to depend on the bean crop. Japanese firms have an easy monopoly of this trade and can sell bean cake at Japanese ports and beans in European markets at c. i. f. prices which are as low or lower than the f. o. b. Dairen prices of local European firms. None of the local foreign firms has shipped any considerable bean cargo to European ports during the past season.

[From Consul General Thomas Sammons, Yokohama.]

**Japan's Rapidly Increasing Silk Industry.**

The silk industry of Japan has increased in 10 years from approximately \$37,000,000 to \$65,000,000. This is particularly gratifying to the Japanese, when it is known that the raw-silk production of China, Italy, Persia, Turkestan, and other parts of the world have made but slight increases. The chief effort of the Japanese authorities is now being directed to the improvement of the quality of the raw-silk production of the country.

**DOMINANCE OF BRITISH SHIPPING.**

In an article entitled "Thirty years of British shipping" the London Economist prints the following table of the tonnage owned by the United Kingdom, its colonies and dependencies, and by foreign countries.

Year.	United Kingdom.	British colonies and dependencies.	Foreign countries.	Total.	Percentage of British.
1850.....	3,565,133	667,829	4,938,256	9,171,218	38.9
1870.....	5,690,789	1,458,345	9,962,533	17,111,667	35.6
1890.....	7,978,538	1,709,559	11,786,621	21,474,709	37.2
1900.....	9,304,108	1,447,284	15,459,916	26,211,308	35.6
1910.....	11,556,663	1,906,325	20,162,567	33,525,555	34.3

**In explanation the Economist states:**

The figures for foreign countries are incomplete for the years 1850 and 1870, and the totals given above are considerably lower than they should be. Hence the proportion of British tonnage appears to be higher than it actually was. The total tonnage registered under the United States flag can be divided into two parts, that used for foreign trade and that used on the Great Lakes. In 1850 the United States had 1,585,711 tons of shipping registered for foreign trade and 1,899,555 tons for the Lakes; in 1910 the foreign-trade figures had shrunk to 791,825 tons, while the Great Lakes tonnage had risen to 6,716,257.

A fruit-preserving industry established at Kingston-on-Thames, England, 15 years ago, has developed to such an extent that a new factory covering nearly 2 acres is being erected and will be completed in time for the coming fruit season. It will be the largest factory of the kind in the vicinity of London.

**BRITISH DEVELOPMENT OF AFRICA.**

[From the London Times.]

**Northern Nigeria.**

The industrial progress of the colony during the 12 months has been substantial. The completion of the Lagos Railway (northern extension) to Zungeru, the administrative capital, was effected in January, 1912. Thereby the period of the journey to England is reduced by eight days. Great progress has been made in railway construction in other particulars. On the Baro-Kano Railway the line between Zaria and Kano was opened to passenger traffic in November and is now in regular use. The Bauchi Light Railway has been completed to Rahamma, 90 miles east of Zaria. This will facilitate the export of tin from the Bauchi mining districts. A considerable amount of prospecting for tin has been in progress throughout the year, and discoveries of lodes have been reported. In January, 1912, the discovery of rich monazitic concentrates was reported, samples of which have been sent to England for appraisalment.

**Southern Nigeria.**

There has been a phenomenally rapid increase in the trade and revenue of the colony. The returns for 1911 showed a gross trade exceeding \$55,000,000 with a revenue approximately \$10,000,000. A census of Southern Nigeria shows an estimated population of 7,858,689.

The completion of the Lagos-Minna-Kano Railway connects Northern Nigeria by rail with the seaboard. In 1903, two years after the opening to Ibadan, the gross revenue of the railway was only \$250,000, while this year there is little doubt that the receipts will exceed \$1,500,000, and for next year they are estimated at \$1,750,000. The extraordinary traffic development realized on the Lagos line is due to the fact that it passes through the oil-palm belt up to Ikirun at 200 miles from the coast, and the Lagos line can not fail to benefit from the exploitation of the Bauchi tin field. The deepening of the Lagos bar by dredges is progressing, and extensive harbor improvements are in progress. These works will enable Lagos to become an open port for most ocean-trading steamers.

Extensive coal deposits have been discovered at Udi. The tests carried out by the Government and the analyses at the Imperial Institute have given results equal to two-thirds that of the best Welsh coal. The survey for a railway to connect this coal field with the river port of Onitsha is being carried out. The importance of this line, as affording cheap fuel to the two Nigerias, would be very great, while it would make for the development of the trade of this rich district and the settlement of intertribal disputes among the natives of the hinterland. The lignite deposits to the west of the Niger are also very valuable; and those at Okpanam vary from 15 to 20 feet in thickness.

**The Gold Coast.**

A number of public works of considerable magnitude are in hand in the colony, good progress on which has been made during the year. The most important of these are the Accra harbor works, estimated to cost \$850,000; the Sekondi harbor works, \$900,000; the Accra waterworks, \$1,000,000; the Sekondi waterworks, \$900,000; and the Kumasi-Ejura road, \$425,000. In addition, a regular service of passenger trains has been inaugurated on the Accra-Akwapim Governmental Railway. In other ways, too, the colony has made substantial progress. The value of the cocoa exported practically doubled from 1910 to 1911, rising from \$4,300,000 to \$8,000,000, and there was a \$1,000,000 increase in the export of gold.

Among the more important legislative enactments of the year were an act making provision for the formation of forest reserves, and one providing for the organized destruction of mosquito larvæ, a measure which, if successfully enforced, should materially benefit the health of the colony.

**East Africa Protectorate.**

The general progress in British East Africa during the year has been very satisfactory. Trade and revenue have increased, and there has been a rise in the price of land. The most important individual work of the year has been the commencement of the Magadi Railway; but other projects for the development of the Protectorate on which work has been begun, under the loan of \$1,200,000, are the Thika Railway, the Mom-basa water supply, and the Kilindini deep-sea pier. A very successful agricultural show was held at Nakurn.

**British Nyasaland.**

The year 1912 opened with the further welcome news that the Imperial Government has successfully arranged for the extension of the existing line of railway from Blantyre to Port Herald southward to the Zambesi and thence to Beira. Nyasaland will

eventually be linked up to the coast by a continuous line of railway, and there is little doubt that the line to Beira will result in the rapid development of the country. Trade returns already indicate a healthy outlook for the future.

#### Uganda.

The rapidity of the industrial growth of Uganda is emphasized by the fact that in the year ended November 30, 1911, the exports from the Protectorate showed a net increase over the previous year of \$336,000. The output of cotton, which was 858 hundredweight (hundredweight=112 pounds), valued at \$5,230, four years ago reached 83,000 hundredweight, valued at \$800,000, in the year 1910-11, and a further large increase in the current year is confidently anticipated, a larger area being under cultivation. The entire cotton crop of the Protectorate, it should be noted, is produced by natives.

On January 1, 1912, the Busoga Railway was opened, the first railway in Uganda, connecting Jinja, the headquarters of the Eastern Province, in the Ripon Falls, the source of the Nile, with a point 58 miles down the river, Namasagali, where the Nile first becomes navigable for steamers. The line should be of great benefit.

#### The Bechuanaland Protectorate.

On February 29, 1912, the dam, estimated to contain 45,000,000 gallons of water, constructed by the Rhodesian Railways (Ltd.) on the Metsimashwane River, was formally opened in the presence of a gathering which comprised most of the leading Europeans of the Protectorate.

### JAPANESE WANT COAL DEPOT IN HAWAII.

[From Honolulu Bulletin.]

That a large supply of Japanese coal may be deposited at Honolulu soon, presumably as a commercial venture, is indicated by inquiries now being made here by H. Yokatake, representing the great Japanese coal merchants Mitsui & Co. Mr. Yokatake has been prospecting along the water front for a possible site for a coal depot, together with landing rights and facilities for such ~~colliers~~ as might be used to keep the local pile up to full strength.

Mr. Yokatake called at the naval station and held a conference with the commandant as to the possibility of selling Japanese coal to the Navy. Admiral Cowles informed him that all the Navy coal was shipped here by the department direct and that no local purchasing was done. However, Mr. Yokatake put in some of his time looking over the land proposition, "just in case my company might want to locate a branch here," as he expressed it. He made particular inquiries as to when the Navy was to move its establishment to Pearl Harbor, and if there was any chance of a commercial concern securing the present naval wharves.

The only user of Japanese coal here at present is the Army, the transports burning this grade of fuel. The Army pile is supplied by the animal transport *Dix*, purchases being made in Japan. The *Dix* is to bring 9,000 tons in the near future, to replenish the Army pile, which is now very low.

### EXTENDING DOMINION TRADE SERVICE.

[Canadian press announcement from Ottawa.]

Negotiations have been opened by the Canadian Government, acting through the Trade and Commerce Department, with the Imperial Government in England with a view to having the British consular service cooperate with Canadian officials in extending the trade of Canada. This important step is part of the program mapped out by Hon. Geo. E. Foster, for the complete reorganization of the external trade service of Canada. There is to be in future a far more strict and efficient supervision of trade agencies from Ottawa. Mr. Richard Grigg, the new commissioner of commerce, will have oversight of the whole trade service, and the collection and publication of statistics and information on trade matters. In this connection the cooperation of boards of trade is to be sought and their experience turned to account.

*Mexican oil shipments.*—Consul Clarence A. Miller reports that the crude oil shipments from the Mexican port of Tampico to ports in the United States (including one shipment to Porto Rico) amounted to 1,118,547 barrels in the first quarter of 1912, in contrast to a total of 806,916 barrels during the entire calendar year 1911.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 9027. Concrete freight pier and sea wall.**—An American consular officer reports that a foreign Government is prepared to receive tenders from engineers and contractors, experts in reinforced concrete work, for the construction of a ferro-concrete freight pier and sea wall in a certain harbor. The drawings and specifications may be inspected at the office of a firm in the United States, whose address can be obtained from the Bureau of Manufactures. Tenders can also be filed there up to August 31, 1912.
- No. 9028. Telephone equipment.**—A telephone company in a foreign country has under construction a public telephone line which will be completed in the near future. Another telephone company in the same country has decided to install a modern telephone exchange for general and exchange business, while a number of extensions will be made by both companies. The names of these companies, together with further details furnished by an American consulate, will be sent to interested firms by the Bureau of Manufactures.
- No. 9029. Woodworking machinery.**—A business man in a European country informs an American consulate that he wishes to be placed in communication with American manufacturers of woodworking machinery, especially machinery used for making from hardwood the so-called D handles for shovels. Terms and discounts should be quoted, and full descriptions should be given in German.
- No. 9030. Coal and lumber.**—An American consul in the Levant furnishes the name of an important commission house in a large city that wishes to enter into relations with American exporters of coal and of lumber (including doors, sash, blinds, and building material). This firm has been established in business for many years and has a good reputation.
- No. 9031. Textiles, leather, skins, and military furnishings.**—A report from an American consular officer in the Near East states that an important commission house in a large city desires to enter into relations with American exporters in all branches of the textile trade, leather and skins, and general military furnishings. This is a long-established firm and enjoys a good reputation.
- No. 9032. Machinery of various kinds.**—An enterprise, controlled by certain business men in a foreign country, has extensive banana plantations and desires to purchase and install machinery for cutting (slicing) and drying bananas, and ultimately grinding the desiccated product into banana flour for export. The company believes that there is special machinery for this purpose offered for sale in the American market. It estimates that it would have 400 to 500 tons of bananas to handle and turn into flour. Hand-power machinery, as well as that controlled by light portable motors (electric or gasoline), might suit the purpose better than steam machinery. The firm would also be interested in receiving from the United States catalogues and specifications of machinery for sorting, cleaning, etc., of coffee and cacao.
- No. 9033. Shoes.**—The manager of a foreign business firm informs an American consular officer that he wishes to start in business for himself. He therefore asks that catalogues be sent him, together with price and discount lists, of American shoes (men's and women's). The article desired should be attractive in appearance and should sell at wholesale prices at not more than \$2 to \$2.50. Fancy and "extreme" types of shoes might also find favor in the country in question.
- No. 9034. Railway ties and timber.**—An American consular officer reports that a railway company in his district is in the market for 15,000 railway ties of standard width and 3,100 pieces of timber suitable for ties, but of double length. Specifications and other particulars can be obtained from a person named in the report. Correspondence may be in English.
- No. 9035. Hand looms.**—A business man in a Mediterranean country desires to communicate with American exporters of hand looms. He has corresponded with French manufacturers, but informs an American consul that he will await the arrival of American catalogues before ordering. American shippers should hurry catalogues, price lists, and other particulars if they wish to secure the orders. Write in Italian, and if possible quote prices c. i. f. point of destination. All possible information should be sent by the first mail.

## REVIEW OF GERMAN TRADE AND INDUSTRIES.

[By Consul General A. M. Thackara, Berlin, supplementary to a preliminary report published Feb. 29.]

The improvement shown in the industrial, financial, and commercial conditions of Germany in 1910 continued during 1911. Notwithstanding the disturbed condition of Germany's foreign affairs in the second half of last year, and the shortness of the fodder crops, considerable activity was displayed in almost every branch of commerce and industry.

The favorable situation was reflected in the foreign trade; the increased production and consumption of coal, iron, and steel; the increased receipts from passenger and freight traffic of the railways and the ocean steamship companies; the satisfactory condition of the labor market; the larger receipts from taxation; the stability of the official rate of discount; and the satisfactory balance sheets shown by the financial institutions.

### Increased Foreign Trade.

The value of Germany's total foreign trade in 1911, according to advance statistics recently published in the Imperial Gazette, giving the corrected values of the imports and exports by countries, was \$4,338,044,802, an increase of \$302,947,582, or 7.5 per cent, over the previous year. The value of the imports, including precious metals, was \$2,381,461,082, compared with \$2,215,778,096 in 1910, and the exports, also including precious metals, \$1,956,582,768, against \$1,819,319,124 in 1910.

The imports of precious metals in 1911 were valued at \$71,704,640, compared with \$89,456,108 in 1910, and the exports \$28,163,730 and \$40,349,806 for the two years, respectively. The imports without precious metals in 1911 amounted to \$2,309,756,442 and the exports \$1,928,419,038, while in 1910 the values without precious metals were \$2,126,321,988 and \$1,778,969,318, respectively. From the foregoing figures it will be seen that there was a much larger increase in the foreign trade than indicated in the preliminary report printed in the Daily Consular and Trade Reports for February 29.

**Imports and Exports by Countries,**

The value of imports into and the exports out of Germany, by countries, for the past two years, precious metals not included, was as follows, in round figures:

Countries.	Imports from—		Exports to—	
	1910	1911	1910	1911
United States.....	\$282,600,000	\$319,800,000	\$150,600,000	\$152,300,000
Argentina.....	85,000,000	85,000,000	57,200,000	60,900,000
Australia.....	67,000,000	60,200,000	15,100,000	19,000,000
Austria-Hungary.....	180,700,000	175,900,000	195,500,000	218,400,000
Belgium.....	77,500,000	80,900,000	93,000,000	98,200,000
Bolivia.....	7,000,000	8,700,000		
Brazil.....	66,400,000	76,200,000	20,000,000	26,200,000
British India.....	96,200,000	104,800,000	21,400,000	23,700,000
British South Africa.....	14,100,000	13,300,000	12,900,000	11,300,000
British West Africa.....	25,800,000	25,400,000	3,600,000	(1)
Canada.....	(1)	(1)	8,700,000	10,200,000
Ceylon.....	8,400,000	8,800,000	(1)	(1)
Chile.....	36,800,000	37,700,000	15,400,000	20,300,000
China.....	22,500,000	24,600,000	15,800,000	17,100,000
Cuba.....	(1)	(1)	5,300,000	6,200,000
Denmark.....	37,600,000	42,900,000	53,700,000	51,800,000
Dutch East Indies.....	44,600,000	43,500,000	11,500,000	14,600,000
Egypt.....	22,300,000	23,700,000	8,100,000	10,100,000
France.....	121,100,000	124,600,000	129,300,000	142,500,000
Italy.....	65,300,000	67,800,000	77,000,000	82,800,000
Japan.....	8,800,000	8,900,000	21,200,000	26,800,000
Mexico.....	5,600,000	7,400,000	11,200,000	10,700,000
Netherlands.....	61,500,000	70,800,000	118,700,000	126,800,000
Norway.....	11,800,000	12,900,000	28,500,000	29,600,000
Roumania.....	16,400,000	25,700,000	15,600,000	21,700,000
Russia.....	330,000,000	389,000,000	130,200,000	148,800,000
Spain.....	33,400,000	39,000,000	17,000,000	21,000,000
Sweden.....	39,000,000	43,600,000	45,300,000	44,500,000
Switzerland.....	41,400,000	42,800,000	107,700,000	114,800,000
Turkey.....	16,000,000	16,700,000	24,900,000	26,900,000
United Kingdom.....	182,400,000	192,500,000	262,300,000	271,200,000
All other countries.....	119,100,000	133,200,000	93,100,000	109,700,000
<b>Total.....</b>	<b>2,126,300,000</b>	<b>2,309,800,000</b>	<b>1,779,600,000</b>	<b>1,928,400,000</b>
Precious metals.....	89,500,000	71,700,000	40,300,000	28,100,000
<b>Grand total.....</b>	<b>2,215,800,000</b>	<b>2,381,500,000</b>	<b>1,819,900,000</b>	<b>1,956,500,000</b>

<sup>1</sup> Statistics not given.

As seen from the foregoing table Russia ranks first in the value of the imports into Germany, the United States second, and Great Britain third. The last-named country, however, is the best customer for German products, Austria-Hungary coming next, and the United States third. If the total trade between the countries is considered, Russia is first with \$537,800,000, the United States second with \$472,100,000, and Great Britain third with \$463,700,000. Many of the exports to Great Britain are reshipped to the British colonies. The decrease in the imports from Austria-Hungary in 1911 was due principally to the smaller receipts of Bohemian coal, owing to abnormally low water in the Elbe during the last half of the year and to smaller shipments of meat on account of the scarcity of Austrian cattle. There is a decided growth in the trade between Germany and the Latin-American republics. The shipments from Germany to China increased from \$13,500,000 in 1909 to \$17,100,000 last year.

Of the total imports and exports in 1911, not including precious metals, 66 per cent of the trade was with other European countries.

**Imports and Exports by Articles.**

Detailed corrected values of Germany's foreign trade in 1911 have not yet been published, but in the following table are given the

weights in metric tons of the imports and exports for the past two years of the more important articles in the trade of Germany with other countries:

Articles.	1910	1911	Articles.	1910	1911
<b>IMPORTS.</b>			<b>EXPORTS.</b>		
<b>Breadstuffs:</b>	<i>Tons.</i>	<i>Tons.</i>	<b>Aniline, etc.</b>	<i>Tons.</i>	<i>Tons.</i>

<b>Total.....</b>	64,496,058	68,363,326			

In addition to the foregoing, there were imported 142,655 horses in 1911, compared with 149,104 in 1910, and 518 ships and boats,

compared with 857 in the previous year. The horses exported last year numbered 7,940 against 7,116 the preceding year, and the vessels exported totaled 828 and 753 for 1911 and 1910, respectively.

#### Imports of Breadstuffs.

Although the native crop of wheat for 1911 was good, increased consumption and the facilities of the import-certificate system were the reasons for larger imports and exports than during the previous year. Of the total imports of breadstuffs last year, the principal countries whence imported and the amount in metric tons were as follows: Wheat, United States 301,722, European Russia 1,118,395, Argentina 537,710, Roumania 224,667, Australia 111,775; rye, Russia in Europe 556,876, Roumania 49,526, Servia 2,961; oats, Russia in Europe 515,568, Argentina 86,564, Roumania 22,097; barley, United States 950, Russia in Europe 3,223,496, Roumania 134,653, Austria-Hungary 85,153; corn, United States 143,100, Russia in Europe 230,890, Roumania 143,101, Argentina 128,926; wheat flour, United States 4,939, Austria-Hungary 4,381, Belgium 2,892; rye flour, Austria-Hungary 766, Belgium 207.

#### Output of Principal Crops.

There were no important increases in the areas planted in farm products in 1911 as compared with the previous year. Slight decreases were noted in the acreage of spelt, winter rye, potatoes, clover, lucerne, and meadow hay. Despite the severe drought which prevailed throughout the summer and which greatly reduced the yield of fodder and certain other crops, the harvest of the principal grains was bountiful. Wheat and rye came through the winter in such a healthy state that they were able to withstand the dryness and matured under the influence of the warm weather with a color and quality seldom in evidence. Grouping the spring and winter wheat production, the total harvest was 4,066,335 metric tons, which is a record, while the rye crop was second only to that of 1909.

The following table shows, in metric tons, the quantity of the principal crops harvested in 1911, compared with 1910:

Crops.	1910	1911	Crops.	1910	1911
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Wheat:			Barley.....	2,902,938	3,159,915
Winter.....	3,428,686	3,640,229	Oats.....	7,900,376	7,704,101
Spring.....	432,703	425,106	Potatoes.....	43,498,395	34,374,225
Spelt.....	387,931	402,729	Clover and grass.....	11,943,857	7,070,465
Rye:			Lucerne.....	1,653,219	1,091,821
Winter.....	10,371,855	10,727,071	Meadow hay.....	28,280,115	19,975,324
Spring.....	139,305	139,045			

#### Failure of Fodder Crops.

The first hay crop was fair, while the following was almost a total failure. The potato and sugar-beet crops were also adversely affected. Potatoes being a staple article of food, especially among the poor, the reduced yield brought distress. The price advanced so in the course of the 1911 winter that despite the large decrease in the crop it yielded approximately the same money return as for 1910. The almost total failure of the fodder crops was the most distressing feature of the situation. Farmers who normally had fodder to sell not only retained what they had produced but were in many instances forced to buy. It was stated that some 8,000

tons of beet pulp were imported from the United States, the first instance of such purchases. The principal article imported was barley from southern Russia, and as the drought had affected that region also the prices advanced heavily.

The situation was aggravated by the operation of the customs drawback system, which, making it possible to sell German grain at a better profit abroad than at home, induced a countervailing export to Russia. Toward the end of August the railway administrations, with a view to ameliorating the situation, reduced the tariffs on fodder by one-half. With high prices for fodder the prices of cattle advanced. Cattle epidemics were prevalent during the summer. This not only induced a still further increase in cattle prices but through the quarantining of affected regions hindered the marketing of other farm products. The abundance and excellent quality of the bread grains, especially the high flour content of the wheat, were about the only redeeming features in the agricultural situation.

**Imports of Fuel, Copper, Cotton, Rice, Lard, etc.**

Owing to the record production of mineral fuel in Germany in 1911 all the imports of briquets, coal, etc., in that year fell off as compared with 1910. The great activity in the electrical industries is reflected in the increased imports of raw copper. Of the receipts in 1911, 171,763 tons, or 89.6 per cent of the total imports, came from the United States. All petroleum products for illuminating and lubricating purposes, except refined petroleum, showed an increase in the imports in 1911. The great bulk of refined petroleum received during last year was American oil, the figures being 745,302 tons from the United States, 142,876 tons from Austria-Hungary, 48,631 tons from Roumania, 16,093 tons from Asiatic Russia, and 2,389 tons from Russia in Europe.

Raw cotton receipts in 1911 increased over 45,000 tons as compared with 1910, due principally to the lower prices of the American staple, which enabled the German spinners to replenish their depleted stocks. Of the total amount of the staple imported last year, 336,138 tons came from the United States, an increase of 56,288 tons over 1910; 60,427 tons from British India, a falling off of 22,398 tons; and 36,902 tons from Egypt, an increase of 3,217 tons. The notable falling off in the imports of rice in 1911 was due to the high prices which prevailed in consequence of the short crops in Japan, Cochin China, Siam, and Java. There were increased lard receipts of nearly 38,000 tons in 1911, owing to the low prices of the American product. Of the total imports of lard in 1911, 91,914 tons came from the United States.

Other products showing an increase in the receipts during the past year were cocoa beans, coffee, jute, crude rubber, fur skins, machinery of all kinds, iron ore, oil cake and meal, phosphates, butter, sausage casings, clover and other seeds for planting, unmanufactured tobacco, and wood for building. Articles showing a decrease in the imports besides those mentioned were copra, palm kernels, cotton yarn, fresh and dried fruit, saltpeter, and linseed.

**Review of the Export Trade.**

The activity displayed in all branches of the coal-tar color industry in 1911 was reflected in the increased exports of the finished products. All the breadstuffs, with the exception of wheat, showed a consid-

erable falling off in the exports during last year, owing to the home demand and the short fodder crops. The favorable conditions which prevailed in the German coal and iron industries are shown in the increased shipments of the various products. The exports of coal were over 3,000,000 metric tons greater than in 1910, and the shipments of all lines of manufactured iron products were larger, with the exception of steel and iron wire. The greatest increases in the machinery exports were in those for wood and metal working, cotton spinning, mowing and thrashing, centrifugal dairy, sewing, weaving, brewing, distilling, milling and mining, and dynamos and steam locomotives. There were notable increases in the exports of various products of the German potash industry, the great bulk of the shipments going to the United States. Notwithstanding the keen competition of foreign sugar, especially the Russian product, the shipments of German raw and refined beet sugar were nearly 160,000 tons greater than in 1910.

Other articles showing an increase in the exports in 1911 were beer, clothing, copper and brass ware, cotton goods, silverware, natural and artificial indigo, leather manufactures, silk goods, soda, and wool yarn. There were decreased exports in 1911 of the following articles besides those already mentioned: Raw cotton, cotton yarn, goldware, hides and skins, manufactures of wool, and raw and carded wool.

#### Trade in Mineral and Metallurgical Products.

The German imports and exports for the past two years of the principal mining and metallurgical products were as follows, in metric tons:

Products.	Imports.		Exports.	
	1910	1911	1910	1911
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Aluminum.....	9,892	10,454	613	788
Coal.....	11,195,593	10,913,948	24,257,421	27,412,218

Tin.....	17,343	17,971		
Zinc.....	240,544	262,399	59,440	48,908
Pig iron.....	136,326	129,850	786,855	820,393
Silver, uncoined.....	648	712	282	366
Tin.....	14,297	14,500	7,521	7,582
Zinc.....	20,328	48,355	82,603	77,088

#### Coal Production and Trade.

The reduction in the barge traffic, owing to the abnormally low water which prevailed in the navigable streams of Germany during the latter part of 1911 and the car shortage of the German railways from time to time, tended to restrict the output of coal. Several mines were forced to reduce their production during the last months of the year. Despite this, the coal production of Germany reached

record figures. In the following statement, compiled from the official figures of the Ministry of the Interior, is shown the output of coal, lignite, coke, and briquets for the past two years and the imports and exports, in metric tons:

Description.	Production.		Imports.		Exports.	
	1910	1911	1910	1911	1910	1911
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Briquets.....	19,567,016	21,827,067	241,266	210,933	1,988,252	2,477,492
Coal.....	152,881,509	160,742,272	11,195,593	10,913,948	24,257,421	27,412,218
Coke.....	23,600,362	25,405,108	623,477	598,958	4,127,630	4,554,851
Lignite.....	69,104,867	73,516,789	7,397,708	7,069,064	10,048	11,109
Total.....	255,153,754	281,491,836	19,458,044	18,792,903	30,383,359	34,455,670

The increased shipments of coal were due to the greater output, while the decreased imports was caused in part by the difficulties of water transportation and the high freight rates. Competition of foreign coal kept prices down, the Westphalian syndicate and the Upper Silesian mining companies being obliged to make concessions. At the close of the year, however, prices were better. Owing to the high freight rates in the Mediterranean on account of the Turco-Italian war, the competition of English coal was not so much felt. The activity in the home iron industries increased the demands, and the Westphalian syndicate was enabled to raise prices, especially for immediate and pressing wants.

#### Syndicate to Control Coal Sales.

The syndicate will abolish at the end of June, 1912, the bounty of 1.5 marks (35.7 cents) per ton on coal used in the manufacture of iron intended for export. Since the first of the present year the German coal market has continued to improve. The strike which occurred the beginning of the present year in Belgium, involving about 26,000 miners, the temporary cold weather, and the general strike of coal miners in Great Britain all tended to increase the demands for German coal, so that the coal syndicate again raised its prices 25 pfennigs to 1 mark (6 to 23.8 cents) per ton. Its greatest achievement, however, was the arrangement entered into on January 15 last with the Prussian Fiscus, whereby the syndicate undertakes the sale of the coal for the Prussian State mines for one year. Similar agreements were also made with the most important private outsiders, so that the syndicate will be able to eliminate what was formerly a keen competition.

#### Coal Trade by Countries.

Of the coal imports in 1911 Great Britain furnished 9,422,695 tons, a decrease of 230,420 tons as compared with 1910. The receipts of Austrian coal amounted to 523,494 tons, against 570,793 tons. The great bulk of the German coke imports came from Belgium. Austria-Hungary took more than one-third of the total German coal shipments, followed by the Netherlands, Belgium, France, Switzerland, Russia, Italy, Spain, Egypt, etc.

The effect of the coal strike in Great Britain is shown in the German foreign coal trade for the first quarter of this year. The imports of coal fell from 2,088,386 tons during the first three months of 1911

to 1,899,044 tons during the same period of 1912. The coal imports from Great Britain during March of this year fell off nearly one-half compared with the same period in 1911, the figures for 1912 and 1911 being 373,896 and 674,992 tons, respectively. The exports of German coal during the first quarter of 1912 increased from 6,367,819 tons to 7,595,300 tons as compared with the same period in 1911.

The approximate consumption of coal in Germany in 1911, not including the stocks on hand at the beginning of the year, was 144,244,202 tons, against 139,819,681 tons in 1910. The approximate consumption of lignite during the report year was 80,527,782 tons, and in 1910, 76,440,134 tons; of coke, 21,448,589 tons, against 20,095,905 tons; and of briquets, 19,561,108 tons, as compared with 17,800,030 tons in 1910.

#### Production and Shipments of Potash Salts.

The following statement prepared from provisional statistics published by the Imperial Statistical Office shows the production and value of potash salts in Germany during the past two years:

Description.	1911		1911	
	Tons	Value	Tons	Value
Kainit.....	4,246,667	\$12,708,000	4,425,497	\$13,757,000
Muriate of potash.....	741,259	17,370,000	838,420	19,851,000
Sulphate of potash.....	84,584	2,980,000	107,631	3,968,000
Sulphate of potassium-magnesium.....	3,273	668,000	48,263	8,910,000
Double manure salts.....	32,206	159,000	36,764	185,000
Other raw potash salts.....	4,062,004	9,085,000	5,131,379	11,794,000
Total.....	9,172,993	42,930,000	10,637,944	58,465,000

The exports of the most important German potash and potash salts for 1910 and 1911 and the amount shipped to the United States are shown in the following table:

Description.	1910		1911	
	Total	To United States	Total	To United States
	Tons.	Tons.	Tons.	Tons.
Muriate of potash.....	270,337	180,590	329,734	229,240
Sulphate of potassium.....	76,285	39,793	108,555	56,970
Sulphate of potassium-magnesium.....	197,408	92,415	252,574	143,775
Raw potash salts.....	1,191,208	721,246	1,154,974	642,573
Total.....	1,725,138	1,034,044	1,876,837	1,072,558

#### The Potash Situation—Output of Other Minerals.

One of the most notable features in the potash industry in 1911 was the formation of a new potash syndicate, which comprised most of the productive German potash mines. Another important event was the settlement of the dispute between the syndicate and the large American potash companies, regarding the contracts entered into by the latter in 1909 with the Schmidtman group for future supplies of potash. An agreement was consummated through the negotiations at Hamburg, regulating the prices and rebates for the next five years. After long discussions between the officials of the syndicate and the

outsiders—the Aschersleben and Sollstedt mines—all difficulties were finally overcome, so that on December 30, 1911, the two outside mines were admitted as members of the potash combination.

As the new potash law has not been quite two years in force, it is difficult to conclude what will be its effect. Judging from the numerous articles which have appeared in the leading journals and other periodicals, it is the opinion of many that the purposes of the law, to prevent the underselling of German potash to foreign consumers and to eliminate friction among the home mining companies, have not as yet been accomplished. Complaints have been made against the quotas allowed to the members of the syndicate by the committee appointed under the provisions of the law to fix the said quotas for the coming five years, commencing January 1, 1912. Another result of the act, it is claimed, is the formation of many new companies. On January 1 last 94 existing mines were included in the table of quotas. In 1911 the number of syndicated mines increased from 67 to 79, including the Aschersleben and Sollstedt mines. It is estimated that the number of mines being opened will reach 100 and about 20 more are projected. The grave question naturally arises whether the quota can be assigned so that the old and new members of the syndicate will have remunerative returns for their investments.

The output of the following minerals for 1911 is given in metric tons: Asphalt, 81,902; oils, 142,992; pyrites, 217,459, and the following ores: Copper, 868,600; iron, 29,879,361; lead, 140,154; and manganese, 87,297. The output of salt was 645,991 metric tons.

#### German Pig-Iron Production.

The production of pig iron in Germany in metric tons during the past two years was as follows:

Description.	1910	1911	Description.	1910	1911
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Foundry pig and pig iron, first fusion.....	2,965,810	3,063,583	Steel and spiegel iron.....	1,372,196	1,733,280
Bessemer.....	471,366	374,455	Puddle iron.....	644,392	511,792
Thomas iron.....	9,338,961	9,851,113	Total.....	14,792,725	15,534,223

The production of pig iron in 1911 was greater than in any previous year.

#### Syndicate to Govern Sales of Pig Iron.

One of the most important events in the history of the German pig-iron industry was consummated during the past year. After protracted negotiations which commenced shortly after the dissolution of the various pig-iron syndicates, an agreement was finally reached in September last, by which all the important furnaces in Germany entrusted the sales of their products to the new syndicate at Essen-Ruhr, called the Roheisen Verband G. m. b. H. The new syndicate represents production quotas of about 3,500,000 tons. The new arrangement went into effect January 1, 1912, and continues until December 31, 1915. If no notice of dissolution is given before July 1, 1915, the contract will continue in force four years longer. If new local competitors should enter the field, whose output would amount to more than 2½ per cent of the total production quota

of the syndicate, the syndicate may be dissolved by a three-quarters vote of the members, or by a majority vote if the competition should amount to 5 per cent of the production quota of the syndicate. The agreement covers the production of the members of the syndicate of iron which contains less than 30 per cent manganese or 6 per cent silicium. Special contracts have been made between certain furnaces and the syndicate regarding the production and sale of ferromanganese and ferrosilicium. The amount of their own iron consumed by the members in the production of steel is not included in the quotas. The quantity of iron thus consumed is, however, controlled by the officials of the syndicate.

Besides the producers of iron, a number of iron dealers have been admitted as members of the syndicate in order to have closer relations between the producer and consumer. Penalties are prescribed for the violations of the provisions of the contracts. They vary from 10 to 30 per cent of the invoice value of all iron not sold through the syndicate. For nondelivery of iron through neglect there is a penalty of 3 marks (71.4 cents) per ton.

The increased production of pig iron in 1911 resulted in greater shipments abroad and decreased receipts of foreign iron. The exports of pig iron during 1911 were 829,393 tons, against 786,855 tons in 1910 and 471,046 tons in 1909. The largest shipments, amounting to 468,121 tons, were sent to Belgium, and 6,646 tons were exported to the United States. Of the total imports of pig iron in 1911, amounting to 129,850 tons, 85,435 tons were received from Great Britain and 38,791 tons from Sweden. [Particulars regarding the renewal of the German Steelworks Union were printed in the Daily Consular and Trade Reports of May 21, 1912.]

#### **The Steel Industry.**

The results of the year's business in the steel industry were on the whole satisfactory. During the first half of the year the trade suffered from political conditions at home, and the strikes in Great Britain and Sweden, but during the second half of the year prices were somewhat better. The price of beams, for instance, which was \$22.85 per ton in June, was increased by the Steel Syndicate to \$24.37 for Germany. The prices of fine sheet iron on January 1, 1912, ranged from \$33.32 to \$34.51.

The exports of puddle bars and ingots in 1911 were 651,415 tons, against 494,400 tons in 1910; and the shipments of steel rails in the two years were 520,151 and 515,722 tons, respectively. The exports of beams in 1911 were 408,178 tons, as compared with 382,192 tons during the previous year. The Steel Syndicate's sales of the various iron and steel products amounted to 12,195,989 tons in 1911, an increase of 1,209,113 tons over 1910.

The Prussian Government has ordered for use on its railways 241,610 tons of steel rails at an average price of \$27.85 per ton, 108,020 tons of accessories (bolts, nuts, etc.) at an average price of \$41.41 per ton, and 144,870 tons of steel ties at an average price of \$26.18 per ton. The Prussian Government will also place orders for 1,130 locomotives and electric traction engines at an average price of \$16,422 each, 2,696 passenger cars, at an average price of \$4,760, and 26,608 baggage and freight cars, the former at an average price of \$2,380 to \$3,332 and the latter at an average price of \$714.

**Output of Shipbuilding Yards.**

The year 1911 was a favorable one for the German shipbuilding industry, more new tonnage being set afloat than ever before, although the number of craft launched was less than in several previous years. Twenty-six warships, having an aggregate gross registered tonnage of 49,544; 717 seagoing merchantmen of 343,293 tons; and 116 river boats of 13,926 tons, were completed in the private shipyards of Germany during the year. Of the 717 seagoing merchantmen built, 599, of 329,562 tons, were for German account. It is estimated that the values of these, together with harbor craft furnished to the German lines, was \$71,000,000. In addition, 139 merchantmen, with a tonnage of 59,647 were built for German account in foreign shipyards. There were 118 merchantmen, 3 warships, and 30 river boats, having a total gross registered tonnage of 18,784, constructed for foreign account in German yards. Of the total 1911 output of the German yards, 43 per cent of the craft, embracing 81 per cent of the tonnage, was steam.

At the close of the year the German shipyards had vessels aggregating 687,705 tons in course of construction and numerous new orders in sight. There were 3 large freight steamers delivered for the Hamburg-American line during the first part of 1911 to be used in the east Asian trade, and 14 vessels were undelivered and in course of construction at the end of the year. Among the vessels which are still on the ways are two motor-driven freight ships of 5,500 and 4,700 registered tonnage, respectively. Two tank steamers similarly equipped with gas engines are being built for the German-American Oil Co. Among the ships in course of construction for the Hamburg-American Line were two 50,000-ton sister ships, *Europa* and *Imperator*, which are to be used in the north Atlantic service. The additions to the North German Lloyd shipping last year included two small freight steamers for the South American service. A contract has been let by the latter company for a steamer of about 25,000 tons to make 20 knots, and to be delivered in 1914. This vessel is built with special reference to the steerage-passenger transportation in the north Atlantic service.

**Tonnage of German Merchant Marine and Other Shipping Statistics.**

The German merchant marine on January 1, 1911, comprised 4,675 vessels, with a gross registered tonnage of 4,513,191. Of the vessels, 42 per cent, embracing 87 per cent of the tonnage, were steam, and 53 per cent, embracing 10 per cent of the tonnage, were sail. The remainder were lighters, barges, etc.

On the whole, last year was an exceptionally favorable one for the maritime transportation companies. The only unsatisfactory feature was the decline which took place in the volume of emigration, but the losses sustained in this department were more than made up by the exceptionally large freight business done. The North German Lloyd, which declared no dividend in 1908 and 1909, and in 1910 declared one of 3 per cent, last year reported a dividend of 5 per cent. The Hamburg-American Line increased its dividend from 8 to 9 per cent, and, in anticipation of the extension in ocean carrying expected to follow the opening of the Panama Canal, voted to increase its capital from \$30,000,000 to \$36,000,000. The German Levant Line declared a dividend of 6 per cent on its 1911 business—its first divi-

dend since 1902—and is now entertaining a proposition for increasing its capital to \$2,800,000.

The total number of emigrants leaving the port of Bremen last year was 115,044, compared with 157,896 in 1910, and those leaving Hamburg totaled 86,895 and 118,131 for the two years, respectively.

#### **Increased Receipts of German Railways.**

Among the indications of the commercial growth which occurred last year was the increase of nearly \$33,000,000 in the freight-traffic receipts of the railroads compared with 1910. The total receipts from the freight transported on the German railroads last year amounted to \$440,800,000, and from passenger transportation \$195,200,000, a gain of nearly \$10,000,000. A portion of the increase in freight receipts may be attributed to the fact that, owing to the low water in the navigable streams following the dry summer, much bulky freight normally transported by barges was diverted to the railways during the autumn months. There was, however, an offset in the fact that in order to alleviate the distress caused by the almost total failure of the fodder crops the railways reduced the rates on many agricultural products as much as 50 per cent. It is estimated that the loss of income resulting from these reductions amounted to considerably more than \$1,000,000 during September and October alone.

#### **Decreased Profits from Finished Wares.**

Owing to the increase in wages, the higher prices of raw materials, and the necessity for increased capital outlays, the decrease in profits from finished wares, with few exceptions, was general throughout last year. The prices of raw and sheet zinc, tin at certain periods, lead, copper from October on, and tin plate during the first nine months were high. Prices for iron and coal were on the whole well maintained throughout the year and toward the end advanced. Wool quotations went up 5 to 10 per cent from January to May, remaining stationary throughout the summer and falling off somewhat in the autumn. Hemp, flax, linen yarn, and raw jute were more expensive than in 1910. Cotton and silk were cheaper than in 1910. Hides and furs and woods of different kinds were higher.

The sharp competition which prevailed in all branches of industry necessitated new and improved factory erections, greater expenditures for advertising, etc. Except in the building industry the needed capital was easy to obtain, although the interest rate was somewhat higher than in 1910. The fact that, despite a lively demand existing throughout the year, prices for finished articles with but few exceptions did not advance in proportion to the increase which occurred in the cost of production is attributed in some quarters to a belief that the productive capacity of German industry is developed beyond the absorbing capacity of the market. Liberal allowance of bank credit has encouraged plant and other extensions which the state of the market has not altogether warranted; and in the case of a number of large industrial undertakings it is said that extensions have been made more with an eye to impending syndicate renewals than with reference to the actual requirements of consumption.

#### **Industrial Amalgamations.**

The extension of industrial capacity has brought about a generally increased tendency toward centralization, particularly in the steel

and iron, lignite, potash, metal, electrical, chemical, and textile industries, and among the manufacturers of gas motors and of railway cars. During 1911 there was a significantly smaller number of syndicate dissolutions. On the other hand, many new organizations were effected and existing organizations continued. The formation of the pig-iron syndicate was the most important of these events. Others, brought about toward the close of the year, were the Lignite and Briquet Sales Union, organized in December by the lignite mine works of eastern Germany, representing a combined yearly output of about 150,000 metric tons of briquets and 135,000 tons of lignite; the United Brick Works (Ltd.), organized in Weissenfels by a large number of Thuringian brick and earthenware works with a view to controlling output; and the Convention of Chemnitz Wool Stocking Factories, founded January 1, 1912, also with a view to regulating competition.

Three syndicates in the hardware, textile, and tobacco industries, respectively, were renewed, and in addition the following important syndicate extensions took place: An agreement was effected between the Prussian Government, in its capacity as mine operator, and the Rhenish-Westphalian Coal Syndicate; the Orlas Mining Co. entered the potash syndicate; the southern and western milling associations effected a union with a view to establishing a more complete control over the flour industry; and the Economic Union of German Gas Works (Ltd.), with headquarters at Cologne, entered in an "agreement as to common interests" with two other similar associations. Under the agreement the Cologne syndicate has taken over the sale of all by-products of the associated factories. At the close of the year the syndicating of the petroleum interests and the extension of the Rhenish-Westphalian Cement Syndicate were under consideration.

#### **The Chemical Industry.**

With but few exceptions, conditions in the various branches of the chemical industry were most favorable. Heavy orders were received both for home and foreign consumption, and in many lines the prices for natural and artificial preparations were higher. The demands for drugs and chemicals were so large that the manufacturers of raw materials, such as acids, ammonia, etc., experienced great difficulty in filling their orders. There were especially notable increases in the demands for medicinal preparations on account of the numerous cases of illness, such as influenza, scarlet fever, diphtheria, and other ailments due to the heat of last summer. Many orders were received by the German manufacturers for disinfecting and other materials which were used in stamping out the plague in the Far East.

Luftsaltper or air saltper manufactured from nitrogen extracted from the air by the Norwegian and Swedish plants is slowly finding its way to the market. It is expected that in the near future the Norwegian saltper can be shipped in large quantities to the centers of consumption. Its success as a competitor with the Chile product will naturally depend upon the price. At present the artificial saltper is selling at 8 to 9 pfennigs (1.9 to 2.1 cents) more per kilo (2.2 pounds) than Chile saltper, but it is thought that the prices will soon be equalized. In 1911 there were only 493.3 metric tons of soda saltper (natron saltper) imported from Norway, as against 730,939 tons received from Chile. There were also imported in 1911 473.4 tons of nitrate of ammonia from Norway and 139.2 tons from

Sweden, and 14,494 tons of nitrate of lime (Saltpetersäures Kalk) from Norway and 1,033.6 tons from Sweden. Not only in Sweden and Norway are new plants in course of construction for extracting nitrogen from the air, but also in Upper Bavaria, in the Tyrol, in Switzerland, and in the Valley of the Rhine.

The favorable business year of the German chemical industry is reflected in the increased dividends declared by many of the chemical companies, in the amount of capital invested in new companies, and in the capital used in extending existing industries. The total amount of new capital invested in the chemical industry last year was \$16,226,840, compared with \$6,333,180 for 1910. For last year \$10,010,280 was employed for the creation of new companies and \$6,216,560 for the extension of existing industries.

The drought of last summer unfavorably affected the crops of medicinal roots, leaves, and seeds, in consequence of which the prices of these raw materials were much higher. The prices of certain bulky products used in the chemical industry were also affected, owing to the difficulty of securing water transportation.

#### **The Machinery Trade.**

In general, the conditions prevailing in the German machinery trade in 1911 were more favorable than in the previous year, although all the branches were not affected alike. The production was greater in many lines; there was a larger demand for raw material, as shown by the statistics of the coal and iron industries; and the number of applicants for work was smaller during the year as compared with the corresponding months of 1910.

The dullness in some of the branches of the textile industry naturally affected the trade in textile machinery, and the purchasing capacity of the farmers in some localities was reduced on account of the prevalence of the foot-and-mouth disease and the shortness of the fodder crops, which resulted in a falling off in the home sales of agricultural machinery. There were less sales of tulle-making and tulle-finishing machines, as the demand for the finished product was small, owing to the reigning fashion in ladies' dresses. Manufacturers of locomotives and railway supplies complained of the smallness of the orders from the State Railway Administrations.

This condition will not prevail during the present year, as the Prussian Government will give orders for exceptionally large supplies of locomotives, passenger and freight cars, and other railway accessories. The manufacturers of steam locomobiles for agricultural purposes are beginning to feel the competition of electric traction, which is more and more replacing other forms of power, the electric current being furnished cheaply by the overland central power station. In the gas and combustion motor branches of the industry business was good throughout the year. The use of crude oil for fuel is constantly increasing in Germany, so that the manufacturers of oil-burning apparatus have been kept busy filling their orders, especially for the larger and medium types. The prices of machinery in general showed a tendency to decline, owing to the keen competition in the home and foreign markets, but on the whole the profits were satisfactory. The balance sheets of 312 machinery companies in 1911 showed an average dividend of 8.3 per cent, as compared with 7.8 per cent in the previous year. Their capital increased from \$165,000,000 in 1910 to \$174,800,000 in 1911.

As in other German industries, there was a tendency toward the concentration of capital in the machinery trade during 1911. The most important fusions were those of the Lubecker Maschinenbau Anstalt with Orenstein & Koppel and Arthur Koppel and the Westfälischen Maschinenbauindustrie, Gust. Moll & Co., with the Maschinenbau A. G. Balcke in Bochum.

**The Building Situation—Leather Industry.**

In the building trade of Germany in 1911 less activity was displayed than in the previous year, owing to the difficulty of obtaining credit from the financial institutions for building operations. Another factor which tended to hold back the erection of new buildings was the new imperial tax on the unearned increment (Reichswertschowssteuer). In the allied industries of the building trade, stone, cement, elevators, builders' hardware, etc., the situation on the whole was as favorable as in the previous year.

Notwithstanding the satisfactory conditions which prevailed in the leather industry during the first six months of 1911, the general results for the entire year were disappointing. In the first semester the weather conditions favored consumption, and the sales of shoes reached record figures. Owing to the dry summer the demand for shoes was limited, and the autumn trade was also unsatisfactory. Some of the shoe factories worked short time and in some instances the factories were closed. In the other branches of the industry such as carriage and automobile upholstery, saddlery, pocketbook and portfolios, belting, clothing, sporting goods, etc., business was good during the first six months, causing a large consumption of leather. The prices of hides reached abnormally high figures in the autumn, receding somewhat in December, but the quality of the hides offered in that month was inferior.

**Increased Earnings of Breweries—Paper Industry.**

The hot weather of last summer had an important influence on the consumption of beer, and the financial results were most satisfactory; 467 brewing companies with a capital of \$132,817,000 declared an average dividend of 7.1 per cent, as compared with an average of 6.2 per cent declared by 472 companies with capital of \$138,127,000 in 1910.

Reports on the paper industry were generally favorable. Owing to the unusually low water for power purposes, the output of wood pulp declined and the cost of production increased. The higher prices of the pulp, however, were not followed by a corresponding increase in the prices of the finished products. On the whole, the trade in all kinds of paper was good during the year and the profit satisfactory.

**Condition of the Textile Industries.**

The favorable conditions which prevailed in most branches of trade during the report year were not felt to a great degree in the cotton textile branch. The decrease in the price of cotton in July, however, caused many mills to buy large quantities. In the wool industry the prices of the raw staples, together with those of yarn waste and artificial wool were high at the beginning of 1911. There was a gradual fall, however, in prices until autumn, when the offers on the London wool market improved. The price fluctuations were unfavorable to the weavers and spinners, and besides, orders were lacking until the last quarter of the year, when the situation improved. The trade in

cheap wool and half-wool cloths for men's and women's clothing was satisfactory, but that in the finer cloths was quiet throughout the year. The outlook for all branches of the woolen industry at the beginning of 1912 was more favorable.

Business was not specially active in the silk industry. With the exception of plush and velvets, sales were difficult and only at low prices. The prospects for the present year are more favorable.

In the flax and linen industries great difficulties were experienced in obtaining raw materials. The prices of flax were unusually high until autumn. The prospects for the coming year are favorable, though much depends upon the state of the Russian flax market. Conditions in the jute industry were satisfactory throughout the year. There were but few labor troubles and the prices were regulated by the German syndicate of jute manufacturers.

Throughout the textile industry the prices of finished products, with but few exceptions, did not keep pace with the greatly increased cost of production. The best results were shown in those branches which were favored by the new fashions.

#### **Decrease in the Prices of Rubber Tires—Firearms and Ammunition.**

In the rubber industry business was brisk throughout the year, and there was a demand from both the home and foreign markets. Competition, however, reduced the prices of many articles to such an extent that there was but little profit either to the manufacturer or to the dealer. Manufacturers of rubber tires for motor vehicles suffered greatly from this cause. To meet the radical cut of one company it is estimated that it cost the German tire manufacturers millions of dollars. The unfavorable situation was still further accentuated by the great fall in the prices of crude rubber, which decreased the value of the stocks of raw material on hand in nearly all of the factories. Most of the companies were obliged to reduce their dividends as compared with 1910. The outlook for the present year can not be considered bright, not on account of lack of orders, but owing to the tendency of the manufacturers and dealers to cut prices.

The manufacturers of arms and ammunition were kept busy throughout the year. Orders at favorable prices were plentiful. As the specifications of the Government contracts are severe and are rigorously enforced, tenders for ordnance supplies are confined to the larger works with modern equipment, so that these concerns, comparatively few in number, can command good prices. The long and dry summer and autumn being favorable for hunting, the manufacturers of sporting guns and ammunition could hardly supply the demand. There were also large sales of air and Flobert rifles and weapons for defense and of ammunition for them. Notwithstanding the regulations in force in many of the towns and cities in Germany against carrying concealed weapons, it is reported that the sales of pistols were large.

#### **Increased Sales of Toys, Instruments, etc.**

Conditions were favorable throughout the year in the German toy industry. The production and consumption are increasing each year. The exports in 1911, amounting to 50,162 metric tons, reached record figures. Of the total 18,178 tons went to the United States and

12,156 tons to Great Britain. These two countries take over 60 per cent of the exports and about 50 per cent of the yearly production.

In the musical-instrument trade the business during the report year was good. The sales were larger than during any previous year.

In the china, porcelain, and glass industries conditions were favorable, although the prices were generally lower than during 1910. The exports in all lines increased, especially those to the United States.

The sales of meteorological, physical, and chirurgical instruments were larger than during 1910. The demands for barometers, registering apparatus, thermometers, etc., used by aviators increased greatly.

#### Activity of the Automobile Industry.

There was great activity displayed in the German automobile industry last year. Everywhere the factories worked under full pressure to fill orders and many of the plants were enlarged. The sales of the small and middle-sized cars were unusually large. One of the important factors which tended to increase the purchases of the cheaper cars was the reduction in the operating expenses, owing to the recent cut in the prices of pneumatic tires.

There is considerable improvement in the building of the small German motor cars. The manufacturers in many cases are using the same material as in the larger and more expensive automobiles. The small machines have 4-cylinder motors of 5 to 8 horsepower, four speeds, cardan drive, three-quarter elliptical springs over the rear axle, honeycomb radiators, all revolving parts except the motor mounted on ball bearings, throttle and often the advance spark lever attached to the inclined steering column, worm-type steering gear, and four-seated, comfortable bodies with glass wind shields and cape cart tops; in fact the low-priced cars are a close imitation of the regular touring automobile.

During 1911 both the exports and imports of motor vehicles showed material gains. The German foreign trade during the past two years was as follows:

Description.	Imports.				Exports.			
	1910		1911		1910		1911	
	No.	Value.	No.	Value.	No.	Value.	No.	Value.
Automobiles and chassis.....	1,229	\$2,263,856	1,244	\$2,342,634	3,399	\$6,930,660	5,136	\$10,057,642
Cycles.....	258	37,366	445	59,500	1,857	257,742	2,499	395,794
Motor cars, industrial.	117	193,018	134	390,082	225	627,368	345	973,658
Total.....	1,554	2,494,240	1,823	3,792,216	5,481	7,845,670	7,970	11,427,094

[The Bureau of Manufactures will issue shortly a monograph on the motor-vehicle trade in foreign countries.]

#### Increased Demands on the Electrical Industry.

Prosperity prevailed throughout all the branches of the German electrical industry during 1911. The factories were kept busy supplying the growing demands incident to the increasing uses to which electricity is being put. The extraction of nitrogen from air, the improving of the water supplies of cities by the use of ozone, wireless telegraphy, the electrification of trunk railway lines, etc., all

tend to increase the consumption of electric apparatus of various kinds. During 1911 a number of new electric power and light plants and electric railways were established and many of those already existing were extended. The activity displayed in certain localities in the building trade caused increased demands for electric materials for the installation of electric light, electric bells, etc.

One of the most fertile fields for the sale of electric apparatus lies in supplying the equipment used in the erection of central power stations for furnishing communities and the farmers with electric light and power. A German electric company is negotiating with the authorities of the Grand Duchy of Gotha to establish central power stations for the operation of electric narrow-gauge railways throughout the Duchy, and to supply the various towns and villages with electric power. The electric company assumes the obligation in the first four years to supply 7 cities and 34 communities and in the second four years the remaining districts. The contract is to run for 50 years from date of signing, the electric company to pay from 0.5 to 1 per cent of the gross receipts to the Government of the Duchy. A number of important central power stations have also been erected in Bavaria, to utilize the mountain reservoirs, in Wurttemberg, in Thuringia, and in Saxony, especially in the lignite districts. To prevent an open or disguised monopolization of the central power stations, the Governments of Prussia, Baden, Alsace-Lorraine, and other States have issued instructions regarding the contracts the different communities may make with the owners of the central stations.

#### **Increased Use of Metal Filament Lamps—Railway Electrification.**

The use of metal-filament lamps is greatly increasing. During the latter part of 1911 there was a disagreement among the manufacturers of the various styles of electric lamps which resulted in a material reduction of prices. At present the production of the metal-filament lamps is confined to the larger companies which own or control the patents or licenses necessary for manufacturing cheaply and efficiently. It is expected that the improvements which are constantly being made in the methods of producing will offset the 25 per cent reduction in prices and thus enable the manufacturers to realize more than the minimum profits which were earned last year.

As the experiments which have been made by the Prussian railway administration with electric traction on the main lines between Dessau and Bitterfeld have proved most successful, orders have been issued to extend the electrification to the trunk lines between Halle and Leipzig, Bitterfeld-Leipzig, Bitterfeld-Halle and Dessau, Dessau and Magdeburg, and Lauban and Königszell. The enlargement of the Muldenstein power works located in the Bitterfeld lignite district has already been commenced. This station alone will supply the high-tension alternating current for operating the entire system. There have been ordered from a works in Berlin two steam turbines, each capable of furnishing 5,000 to 7,000 horsepower, so that probably in 1913 all trains on the lines above mentioned will be drawn by electric locomotives. The whole system embraces about 192 miles. Steam traction on the urban and interurban lines operated in Berlin and its suburbs by the Prussian Government is to be changed to electric. The cost of making the improvement is estimated at about

\$29,345,000. To provide for the first payment, \$11,900,000 has been asked for in the Prussian budget for 1912.

The export trade in electrotechnical products increased considerably in 1911, notwithstanding the sharp competition of foreign manufacturers, the results of which are shown in the reduced values for larger quantities. In the report year the total weight of the exports was 106,114 metric tons against 90,421 tons in 1910, while the values were \$51,367,000 and \$51,931,800, respectively. There were increased shipments of dynamos, electric motors of all sizes, and material for electric lighting and power conveyance. The exports of lamps and electric cables decreased slightly. On the whole the financial results of the year's business were satisfactory.

#### Strikes and Lockouts.

Demand and supply in the labor market were better adjusted in 1911 than in 1910, with a resultant lower percentage of unemployment, as indicated by the decrease in the number of applications at the employment agencies. Strikes were more numerous than in the previous year, but they were isolated in great part and comparatively unimportant. Of the total number of strikes last year, 461 against 419 for 1910 were successful, 1,212 compared with 908 were partially successful, and 879 compared with 786 were unsuccessful. The number of plants affected by the strikes last year was 10,594, employing 593,779 workers. Of the lockouts last year, 69 were successful, 149 partially successful, and 11 unsuccessful.

A strike occurred in May among the Berlin printing pressmen, and an unsuccessful attempt was made to disregard the wage and arbitration agreement which was in force. Agreements between employers and employees were put to another test in the course of the more widespread lithographers' strike, and, as in the first case, were found adequate to control the situation. The other more important labor disturbances of the year occurred in the metal, textile, and tobacco industries. The strike among the makers of women's ready-made clothing in Berlin and a six-day lockout in the Berlin machinery factories involved 50,000 work people. Although these conflicts were in part severe, and the participants in some instances suffered, business was in no case prejudiced more than temporarily.

There was, however, frequently the danger that some single conflict would develop into a general disturbance extending throughout the Empire. This was especially true in the case of the series of strikes and retaliatory lockouts which prevailed in the Saxon and Thuringian metal industries from March into the summer. The success with which these disturbances were kept isolated is attributed to a growing recognition of the fact that the cessation of operations throughout an entire branch of industry involves an economic danger, the responsibility for which neither the employers' nor employees' organizations care to take upon themselves. An active effort was noted on the part of both the laborers and employers in the metal-industry disturbances to restrict the field of conflict to the place of its origin.

#### Increased Cost of Living.

There was a marked advance in the prices of almost every kind of food during 1911. Counting the average prices for the decade 1889 to

1898 as 100, the following are the relative averages for prices in main groups of products for 1909, 1910, and 1911:

Classes of products.	1909	1910	1911
Grains.....	119.05	106.55	112.02
Other domestic agricultural products.....	120.05	121.77	140.00
Foreign agricultural products.....	111.90	111.92	124.48
Animal products.....	128.84	142.06	136.68
Textile products.....	124.29	131.77	138.77
Minerals.....	118.76	121.17	131.11

The general index price for 39 articles was 5,148 in 1911 as compared with 4,662 in 1910 and 4,724 in 1909.

Among the direct results of this sharp advance in the cost of the necessities of life were a marked increase in the number of cooperative distributive societies, a wider extension of the system of wholesale purchase through central agencies, and the direct sale of food at cost by municipalities. The city of Berlin inaugurated in October the sale of fish on certain days of the week in the public market halls, and the plan has been a great success. The fish are purchased by the city at Geestemunde, one of the important coast markets, and are sold at cost plus 5 to 6 marks (\$1.20 to \$1.43) per 100 kilos (220.4 pounds) to cover cost of transportation, etc. It was reported by one of the local newspapers on October 10 that the city was selling halibut at 31 pfennigs (7.3 cents) a pound, while the private dealers asked 35 pfennigs (8.3 cents) for it, cod at 24 pfennigs (5.7 cents) as compared with 35 pfennigs, and flounder at 24 pfennigs as compared with 30 pfennigs (7.1 cents). The sale by municipalities of potatoes and other vegetables, the prices of which were especially affected by the drought, was general.

#### Financial Conditions.

During a part of the two middle quarters of 1911 financial conditions in Germany were disturbed by the unsettled state of foreign affairs. The nation's financial resources, however, were fully equal to the situation. The discount rate of the Imperial Bank at no time went above 5 per cent, and the average for the year was 4.397 per cent, compared with 4.346 in 1910.

One of the few noticeable results of the international situation was a decrease in the amount of new capital invested in the larger industrial and commercial undertakings. There was a marked increase in such investments in the last quarter, but it was not sufficient to overcome the earlier inactivity and bring the figures up to those of 1910. In all 169 new companies, having an aggregate of \$55,700,000 worth of common stock, were organized under one or the other of the two corporate forms most generally employed for large undertakings—"Aktiengesellschaft" and "Kommandit-Gesellschaft auf Aktien," that is, joint-stock companies. This was a decrease of 17 in the number of new companies and of \$5,300,000 in the amount of common stock as compared with 1910. Among the existing companies there was a net aggregate increase of capital stock during 1911 of \$10,000,000 as compared with \$11,500,000 in 1910. On December 31, 1911, there were 5,340 joint-stock companies with an aggregate nominal capital of \$3,832,500,000 doing business within the Empire.

In the larger field of small undertakings, however, there appears to have been increased organizations compared with 1910. There were

4,051 new companies, organized as "Gesellschaften mit beschränkter Haftung," or limited liability companies, the corporate form most in vogue in the domain of medium and small scale business, registered during 1911, with an aggregate nominal capital of \$95,000,000, as compared with 3,872 and a nominal capital of \$80,000,000, in 1910. Among existing companies of this kind there was a net increase in nominal capital of \$20,500,000 in 1911 as compared with an increase of \$18,100,000 in the previous year. On December 31, 1911, there were within the Empire 22,179 limited liability companies, with an aggregate nominal capital of \$1,006,600,000. There were 3,132 companies, with a nominal capital of \$164,000,000, in course of liquidation at the end of the year, and 731, with an aggregate nominal capital of \$36,500,000, in bankruptcy. These numbers are somewhat larger than for the corresponding date in 1910, but not more so than is accounted for by the increase in the total number of companies doing business.

#### **Banking Operations.**

The last provision of the imperial bank law of 1909 went into effect on January 1 of last year. It increased the tax-free note contingent of the Imperial Bank from \$112,600,000 to \$130,900,000 in normal times and to \$178,500,000 at the ends of quarters when settlements are especially heavy, thus placing that institution in a better position to meet current domestic credit needs. It is said in some quarters that even this enlargement of the circulation is not adequate to satisfy the requirements of the nation's rapidly expanding business, as there were only two occasions during the last quarter of the year when the actual issue of notes did not exceed the enlarged tax-free quota. Referring to this and other circumstances, the president of the Imperial Bank insisted at frequent intervals toward the close of the year on the necessity for exercising greater caution in the creation of credit, and the annual report of the bank dwells rather in detail on the crisis of last summer and the dangers of inflation. The annual reports of the private banks, on the other hand, place emphasis rather on the assurances which may be drawn from the successful handling of that situation, and their tone is in general optimistic. The report of the "Discontogesellschaft" asserts that the continuing increase in domestic credit demands is not unhealthy but rather a natural consequence of the growth of population and the development of industrial and commercial activity.

As a result of their 1911 business the eight leading German banks paid an average dividend of 8.82 per cent on an aggregate capital stock of \$283,000,000 as compared with 8.77 per cent in 1910 on an aggregate capital stock of \$274,000,000. In no single instance was a less dividend paid than in 1910. Among the banks which added to their share capital in the course of the year were the Discontogesellschaft, the Mitteldeutsche Kreditbank, the National Bank für Deutschland, and the Barmener Bankverein, an associate of the Discontogesellschaft and now the largest provincial bank in the Empire.

#### **Activity on the Bourse.**

There was more than usual activity on the bourse during 1911, as shown by the fact that the stamp duty on bourse transactions produced \$357,000 more than in 1910. New emissions of stock were

many during the first semester. During the late summer and fall, however, concurrently with the Morocco negotiations, somewhat of a stagnation set in, with the result that the total volume of new emissions for the entire year proved to be less than at any time since 1907. By December, however, most of the losses had been made up and some actual gains effected. The Frankfurter Zeitung approximates the total value of 1911 emissions at \$587,200,000, as compared with \$621,700,000 in 1910 and \$766,900,000 in 1909.

On the average the 1911 quotations for German Government bonds were 1.72 per cent less than those recorded in 1910. The chief reason assigned for this decline is the large amount of loans floated in previous years, coupled with a fear that the former practice of borrowing without providing for amortization may be reinstituted. With a view to remedying the situation, a bill, modeled after an Italian law which requires savings banks and like institutions to invest the greater part of their funds in Government securities, has been introduced in the Prussian Diet.

#### **Government Finances.**

As a result of the financial reform instituted in 1909, the 1911 budget, it is estimated, will show a surplus of \$55,000,000, compared with a deficit of \$5,470,000 for 1910, and \$35,700,000 for 1909. The Prussian Government finances are in equally healthy condition.

No new funded loans were made by either the Imperial or Prussian Government during 1911. There was only a \$20,000,000 issue by Prussia of short-time treasury notes, a considerable portion of which, it is interesting to note, was taken up in the United States. On January 18, 1912, however, new imperial and Prussian bond issues, valued at \$19,040,000 and \$99,960,000, respectively, bearing 4 per cent interest and redeemable April 1, 1918, were floated under the direction of the Imperial Bank and the Prussian State Bank. The price was 101.40 marks (\$24.13) and for registered bonds not transferable before January 15, 1913, 20 pfennigs (4.8 cents) less. The proceeds of the imperial issue are to be used to take up a part of an issue of treasury notes which fall due July 1, 1912; and the proceeds of the Prussian loan for remunerative investments, the chief of which will be the electrification of the Berlin city and suburban railway lines.

#### **Amendment of German Patent Law.**

The amendment to section 11 of the German patent law, relative to the working of patents in Germany, went into force on July 1 of last year. According to the previously existing law, a patent could be withdrawn if the owner had not manufactured the patented article in Germany, or at least had not made proper efforts to do so, within three years of the granting of the patent. Under the amended law, a patent may be withdrawn only when it is proved that after three years from the time of granting the patented article is being manufactured exclusively or chiefly outside of Germany and the colonies. But, when the owner, after a similar lapse of three years, having been offered adequate compensation and sufficient guaranty, has refused permission to another to use his patent, such refusal being contrary to public interest, the right to utilize the invention may be granted to that other under compulsory license (zwangslizenz).

American owners of German patents are not affected by the new law, by reason of the convention of February 23, 1909, between the United States and Germany, which relieves them entirely of the necessity of working their German patents. The situation was discussed at length in a report published in the Daily Consular and Trade Reports for May 31, 1911.

Of the 44,929 patent applications received at the German patent office last year, 1,929 were from Americans, the highest number received from any foreign country except France, which was credited with 1,943. Of the 54,444 applications for utility model patents, 1,073 were from Americans and 700 from Great Britain and colonies. Since the enactment of the present trade-mark law in 1894, 153,140 trade-marks have been registered, of which 917 were by American firms.

#### Trade with United States.

The detailed corrected values of the various articles embraced in Germany's trade with the United States in 1911 have not yet been published, but to indicate the character of the goods the following statement shows the principal imports in metric tons of American goods for the past two years, compiled from the provisional statistics:

Articles.	1910	1911	Articles.	1910	1911
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Agricultural implements.....	19,199	19,567	Machines, metal-working.....	3,220	4,194
Breadstuffs:			Malt and fruit grains.....	57,567	63,293
Buckwheat.....	6,525	1,037	Oil cake and meal.....	196,750	207,997
Corn.....	108,338	143,100	Oils:		
Flour, wheat.....	3,749	4,939	Benzine.....	46,179	78,333
Wheat.....	168,584	301,722	Corn and other fatty oils..	2,081	5,545
Copper, raw.....	159,346	171,763	Cottonseed.....	8,521	12,600
Cotton:			Lubricating.....	105,379	110,971
Raw.....	279,850	336,138	Petroleum.....	787,166	745,302
Linters.....	14,115	17,147	Paraffin, crude.....	6,424	6,678
Feed stuffs.....	106,139	180,963	Phosphates.....	298,359	378,770
Fruits:			Provisions:		
Apples, fresh and dried...	14,467	21,276	Lard.....	53,109	91,914
Apricots and peaches, dried.	2,589	2,174	Oleomargarine.....	17,282	23,645
Prunes.....	15,514	4,870	Premier Jus.....	4,982	6,721
Furs.....	1,574	1,713	Tallow.....	2,107	3,019
Gum, turpentine.....	89,993	83,619	Typewriters and adding machines.....	228	275
Hides and skins.....	5,835	5,306	Wood, lumber.....	442,696	405,367
Lead and lead waste.....	20,331	35,843			

As shown by the advance official statistics, the value of the imports into Germany from the United States, Philippine Islands, and Porto Rico during 1911 was \$320,935,860, as compared with \$283,571,764 in 1910.

#### Declared Exports to United States.

The value of exports from Germany to the United States, Philippine Islands, and Porto Rico in 1911, as shown by German official statistics, was \$153,938,162, against \$152,420,912 in 1910, while the value of shipments to the United States, Hawaii, Philippine Islands, and Porto Rico, declared at the various American consulates during 1911, was \$171,935,884, as compared with \$171,652,448 in the previous year. The exports to the United States proper were valued at \$168,630,821 and \$168,157,697 for 1911 and 1910, respectively.

The difference between the values as given by the German official statistics and those declared at the American consulates is that the

former is based on unit values calculated according to the average prices which prevailed during the year for which statistics are given, and do not include the exports to Hawaii. The American values are based on the actual values in the principal markets of the country whence exported at the time shipped to the United States. The foregoing declared values also include exports of precious metals to the United States, the German figures for which have not yet been published.

The principal articles of export from Germany to the United States during 1910 and 1911 were as follows, in metric tons:

Articles.	1910	1911	Articles.	1910	1911
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Alizarin.....	1,201	528	Post cards.....	1,296	971
Alloys, iron.....	15,173	6,046	Potash:		
Aniline, etc.....	11,088	12,271	Magnesia.....	92,415	143,775
Anthracene, cresote, etc..	30,564	13,990	Muriate of.....	180,590	229,240
Beer and malt extracts in			Sulphate of.....	39,733	56,970
casks.....	1,748,993	1,846,419	Potato starch.....	3,301	2,008
Beet sugar.....	9,579	4,042	Rags.....	30,605	34,526
Cellulose.....	44,014	40,369	Rails.....	2,397	4,572
Cement.....	14,111	20,063	Rice.....	4,235	2,907
Chloride of lime, bleach-			Silk trimmings, etc.....	1,085	1,139
ing dyes, etc.....	10,241	8,467	Stockings, cotton.....	2,704	1,785
Clay, kaolin, etc.....	19,517	14,265	Stone and porcelain ware.	18,261	18,230
Coke.....	51,935	15,268	Sugar-beet seed.....	2,883	4,404
Cutlery.....	860	763	Thomas meal, etc.....	30,780	28,197
Dextrin.....	2,297	1,338	Tin and alloys.....	2,159	1,777
Feldspar, etc.....	13,389	9,512	Toys.....	17,692	18,178
Glass and glassware.....	7,596	6,813	Wine:		
Hope.....	1,433	1,103	Champagne, in bottles	10,319	8,339
Indigo.....	3,489	2,951	Still.....		
Kieserite.....	721,246	642,573	In casks.....	2,212	1,617
Musical instruments.....	1,961	2,295	In bottles.....	2,170	2,285
Oil and grease, palm.....	10,321	14,911	Wood alcohol.....	3,496	4,319
Paper, manufactures of....	14,232	12,687	Wool cloth.....	1,385	653
Pearled grain, etc.....	25,445	17,126			

<sup>1</sup> Gallons.

## BRITISH TOWN PLANNING.

[From the London Times.]

A proposal has been made, and is now receiving influential support, for establishing a professorship of town planning at London University. The idea originated with Mr. John Burns, who suggested at the town-planning exhibition, held at Crosby Hall some time ago, that some wealthy person should endow such a chair; and since then Mr. Herbert Warren, of the Garden City Association, has several times urged its desirability. The matter was at first referred to the executive committee of the association and now a strong committee is being formed to further it.

The recent conference on town planning showed that there is among the local authorities of the country a great deal of keen interest in this subject. Enthusiasm for the movement, indeed, very often outstrips the knowledge of the principles of town planning, which is natural, seeing that those who are at present the technical advisers of the borough and district councils had no opportunity of studying the new theory and practice of town planning when they were preparing for their careers as architects or surveyors. It is for this reason that the creation of the proposed chair at London University is now being urged. It is intended, if the proposed chair is founded, that architectural students should have the opportunity of attending the lectures on town planning as part of their professional studies. Instruction is already given in this subject at Liverpool University by Prof. Adshead and at Birmingham by Mr. Raymond Unwin, and it is strongly felt that students in London should have the same facilities. Sir Philip Magnus, M. P. for London University, Sir William Collins, and Sir Henry Miers, the principal, have expressed great interest in the scheme. It is supported also by Sir Aston Webb, R. A., and Mr. John Burns has offered several valuable suggestions. A professorship at London University should have an endowment of \$3,000 a year, and a lectureship of \$1,500.

**BRITISH WIRE-FENCE MARKET.**

[From Consul General John L. Griffiths, London.]

Wire fencing is being more and more used in this country as timber becomes scarcer, and this is especially true of railways. Galvanized wire netting and fencing wire is being extensively employed for farm and park fences. The following are some of the retail prices, per roll of 50 yards, which obtain in England for galvanized wire netting:

Mesh.	Gauge.	Price.		
		18-inch.	36-inch.	78-inch.
1 inch.....	19	\$1.75	\$3.14	\$6.29
1 inch.....	18	2.13	3.83	7.66
1½ inches.....	18	1.40	2.47	4.91
2 inches.....	18	1.09	1.98	3.83
3 inches.....	18	.79	1.42	2.77

Patent mixed-mesh wire netting sells, per roll of 50 yards, for \$2.19 to \$3.50 for 1½-inch mesh combined with 2½-inch mesh, 18 inches of former and 12 inches of latter, 18 gauge, with a width over all of 30 inches; up to 24 inches of 1½-inch mesh and 30 inches of 2½-inch mesh, and a width over all of 54 inches.

**Fencing Wire.**

Seven-ply galvanized strand fencing wire is priced:

	No. 3.	No. 6.	No. 7.	No. 8.
Approximate number of yards, per hundredweight.....	260	465	546	699
Price per hundredweight.....	\$3.83	\$4.20	\$4.24	\$4.63

Plain galvanized fencing wire is considerably cheaper. Galvanized barbed wire, 2 or 4 point, ordinary or thickset, brings \$3.22 per hundredweight (about 540 yards.) Ornamental garden border hurdles, frames 1 by ½ inch, upright rods ½ inch diameter, 3 inches apart, center to center, are quoted as follows, per yard: 12 inches high, 48 cents; 15 inches high, 49 cents; 18 inches high, 51 cents; 21 inches high, 53 cents; 24 inches high, 55 cents.

**Branch House in England.**

I am strongly of the opinion that American firms would serve their interests much better if, after deciding the question of entering this market, they will establish a branch agency in some central city, such as London, Birmingham, Manchester, or Liverpool, so that they may keep a stock on hand, and so that they may have a representative who will devote his whole time and energy to the exploitation of the market for their article. I am inclined to think that they will meet with rather keen competition, and for this reason it is all the more important that they have a representative whose interests are wholly identified with their own.

[A list of British steel and iron wire manufacturers, wire fence manufacturers, mechanical engineers (millwrights), wire drawers, and wire fencing agents, supplied by Consul General Griffiths, may be obtained from the Bureau of Manufactures.]

**SYRIAN APRICOT PASTE.**

(From Vice Consul General F. Willoughby Smith, Beirut.)

In view of the abundant apricot yield on the Pacific coast, it might be of profit to American farmers in that region to utilize that portion of the yield which is too ripe, or is otherwise unfit for transportation to the fruit markets or canneries, in the manufacture of apricot paste, known in Syria as kamereddin.

This industry has long been in vogue at Damascus and all along the valley of the Barada River. The methods employed are very simple. A basin 2 or 3 feet deep and of a circumference proportionate to the crop to be treated, is dug by the farmer and usually lined with cement. The ripe apricots are stoned and thrown into this basin and beaten into a pulp with tampers. The primitive method of kneading the fruit with bare feet is still often resorted to. The pulp is then spread out on thin boards and placed under trees and in shady places to dry. These boards are of uniform size, and the paste is so spread out as not to be thicker than one-tenth of an inch when dry. The sheets thus manufactured when dry weigh 1 rottle (about 5½ pounds) and look like sole leather.

The price varies with the quality, which is determined by the color and thickness: First quality—clear yellow color and large thin leaf, price 26 to 28 cents per 5½ pounds; second quality—dull color and thicker leaf, price 25 to 26 cents per 5½ pounds; third quality—dull color and fibrous paste, price 23 cents per 5½ pounds.

**Production and Exports—Apricot Jam.**

The annual production of this paste reaches about 4,000 tons, and is increasing yearly.

There is a large market for kamereddin throughout Syria, but of late years considerable shipments have been made to Egypt, Turkey, Roumania, and Germany. The exports in 1910 amounted to about \$150,000. The "leaves" are rolled for export and are packed in cases of 30 to 39 rolls.

In Germany, I am informed, kamereddin is imported for the manufacture of jam, which has the full apricot flavor. The leaves should be soaked for 24 hours in a small quantity of water. The water and apricot paste should then be well blended and put to boil with the required amount of sugar.

The orchardist can produce this paste on the farm and, with little cost and labor, place on the market an article which is easy to ship and which meets a growing demand. In Syria this product is a substitute for candy and is eaten in its original form. It is also made into a sirup and forms the chief ingredient of the many iced drinks served in the native houses. A valuable by-product is obtained in the kernels.

---

**A Mexican Piano Tuner's Travels.**

A piano tuner of Hermosillo travels all over the Mexican State of Sonora, also in Chihuahua, Sinaloa, and Tepic. Consul Louis Hostetter suggests that he might also sell American musical goods to advantage. The address of this man and other dealers in pianos in Hermosillo may be had from the Bureau of Manufactures at Washington.

**SERVIAN PRUNE JAM.**

[From Consul Maddin Summers, Belgrade.]

Prune jam is produced in Servia in large quantities, the output depending on the plum crop. These last two years the crops were under the average, while in 1909 there was none at all. In 1911 only about 1,200 to 1,500 tons were produced and the prices reached an unprecedented height. Purchasers had to pay as high as \$13.40 per 100 kilos (220.46 pounds) f. o. b. Servian stations the past season, whereas in former years prices ranged from \$3.65 to \$6.50 per 100 kilos, including the casks, which usually contain 150 to 200 kilos (330.69 to 440.92 pounds).

The jam is made from fresh, so-called green plums. The fruit is pitted by hand and cooked in big copper kettles. Some makers cook it in the open air, in which case the product is sometimes damaged by bad weather. The jam does not contain any foreign mixture and is absolutely pure when it leaves the warehouse of the makers. It must be free from pits and not burnt. This is usually guaranteed by the makers when the sale is made. It requires long experience to produce a good quantity and quality from a given amount of fruit. The section around Kragoujevatz is known for the best product. The jam must be of a dark color. When it has a reddish tinge it is inferior in quality. It must also be thick and firm, as this is proof that it is properly cooked. Thin and liquid prune jam is inferior. The jam is packed in new casks either with iron or strong wooden hoops so that it can stand long transport.

The greater part of the Servian product is taken by Germany, part going to Austria-Hungary when the Bosnian crop does not cover the demand. The total exports of Servian plum preserves in 1909 and 1910 were valued at \$92,176 and \$568,699, while exports of dried plums were valued at \$433,773 and \$2,102,262, respectively. The amounts of plum jam taken by the United States for the past three years in value has been as follows: In 1909, \$14,388; 1910, \$27,923; 1911, \$9,228; and in 1912, up to June 1, \$4,425. The prices for the present year have ranged from \$15.60 to \$16 per 100 kilos. The freezing weather damaged the crop severely this year and still higher prices are anticipated. Shipments to the United States are usually made by firms in Budapest. American buyers have never tried to purchase the jam in the market direct.

---

**COTTON PRODUCED IN THE NIGERIAS.**

[From Consul W. J. Yerby, Sierra Leone, West Africa, May 11.]

The purchases of cotton in Lagos up to March 23, 1912, were 3,969 bales, as compared with 3,207 bales to the end of March, 1911, and 2,425 bales for the first three months of 1910. The purchases in Northern Nigeria up to the present amount to 1,000 bales, and it is estimated that at least a further 1,000 bales will be purchased before the end of the season. This result is very satisfactory, in view of the fact that previous to this season there have been no adequate transport facilities in Northern Nigeria, and there is every reason to believe that within the next two years 10,000 bales of cotton will be produced in the colony. The average weight of the bale is 400 pounds.

**COMMUNICATION BETWEEN UNITED STATES AND RUSSIA.**

[From Consul Jacob E. Conner, St. Petersburg.]

One of the greatest hindrances to traffic between the United States and Russia has always been the lack of direct communication. This affects both passenger and freight traffic adversely. For the former it results that comparatively few Americans come here, notwithstanding that the few who do come are generally favorably impressed with what they see and the majority are probably astonished to find themselves disabused of long-standing misconceptions.

Three routes of travel are usually followed in reaching this city: First, the northern route from Stockholm by water either to Abo or Helsingfors, Finland, and then by rail to this city, or else direct from Stockholm by water to this city. This is the route followed by tourists who take the Norway trip, and has the advantage of a pleasant sea voyage among the lovely islands of the Gulf of Bothnia and the further advantage of escaping a long detention or any other annoyance at the frontier, since one may thus reach the frontier at St. Petersburg.

The second, or Paris-St. Petersburg route, divides at Berlin, the shorter line crossing the frontier at Eydtkuhnen-Wirballen (Vershbolovo), the longer passing southward through Warsaw and crossing the frontier at Alexandrovo. The time from Paris to St. Petersburg is 48 hours by the Nord-Express and only a few hours longer by the other trains. Railway travel in Russia on the main lines is as comfortable as can be found anywhere; but precaution must be taken to order sleeping-car accommodations in advance.

The third route is direct from New York to Libau by the Russian-American Line, by which it is possible to make the entire distance from New York to Libau in 10 days and to St. Petersburg in 11 days. There are three steamers of this line, making the trip fortnightly, and they are equipped, according to the statement of the company, with "wireless telegraphy, submarine signals, and solid comfort."

**Forwarding Merchandise.**

For the shipment of freight the New York-Libau route is the only direct one in existence. Complaints are continually coming to this office of the delays caused by transshipping at Hamburg and elsewhere by other lines. A shipment of Government supplies destined for this American consulate well illustrates this point. It left New York March 14, reached Hamburg about March 25, was forwarded on April 6 via Reval, which port was at that time closed by ice. This office was advised on April 11 by the local agent that the shipment "was expected," and it is still (May 1) on the way. By direct route mentioned this shipment could have arrived in two weeks, or about one-fourth of the time at least, as above required.

---

**State Railway Operations in Denmark.**

Consul General E. D. Winslow, of Copenhagen, advises that the fiscal year for the Danish State railways (April, 1911, to March, 1912) indicates gross receipts of \$12,000,000. Passenger traffic brought in \$5,500,000 and freight traffic yielded \$6,500,000. The receipts show an increase of nearly \$900,000 as compared with the previous fiscal year. The passenger and freight rates have been slightly increased and better financial results may be expected next year.

**COMBINATION OF SWEDISH TOBACCO MANUFACTURERS.**

[From Consul Douglas Jenkins, Gotenborg.]

A large number of the tobacco manufacturing companies in Sweden (more than 60 per cent, it is reported) have combined under the name of Aktiebolaget Förenade Svenska Tobaksfabriker. The new corporation is to have a capital of 17,000,000 kronor (\$4,556,000), including both preferred and common stock. The stock was oversubscribed more than three times, and at par value. The managing director of the new company is Theodor W. Jeansson. The combination includes all kinds of tobacco factories. Some of the large concerns, however, have not taken part in the formation of the new company, notably one of the most important snuff manufacturers, which has an output equal to one-twelfth of total output in the country.

The 35 factories in the combination have an aggregate annual output of about \$3,300,000. Among numerous reasons given as a cause for the formation of the new corporation, one of the most important is the rather unsatisfactory condition of the business generally in recent years. It is also pointed out that the combination will be in a position to reduce greatly the operating expenses, and, if need be, close down and abolish entirely certain plants. Reductions in selling costs and freights are also anticipated.

The formation of this so-called "trust" has been the subject of much discussion in the Swedish newspapers. It is the third to be formed in this country, the sugar and cement combinations being the preceding ones.

The tobacco industry is not subject to any special form of taxation in Sweden—such, for instance, as the revenue-stamp tax in operation in the United States. Recently, however, the Government has had the question of a special tax in the form of an excise duty under consideration. In fact, the taking over of the tobacco industry entirely by the Government has been advocated in some of the newspapers and by certain public men.

---

**USE OF PUTTY POWDER IN ITALY.**

[From Consul Frank Deedmeyer, Leghorn.]

Putty powder (pote pulvere) is used in Italian statuary studios and is imported by the largest consumers and by druggists from Marseille, France. Druggists sell it at a minimum price of 10 lire (\$1.93) per 1,000 grams (32.15 ounces). About 275 pounds of putty powder is used in this district annually. The marble polishers report that they now use little of it, as "acide ossalico" and plumbago are much cheaper and quite effective as substitutes. Though, for special work, where a very hard polish is desired, a little of the putty powder is mixed with the ingredients named. Putty powder of American manufacture has been used at Carrara, but it is claimed that it costs more than the French article. [The names of the largest users of putty powder may be had from the Bureau of Manufactures at Washington.]

---

*Oranges* are being purchased by Germany in increasing quantities, imports for the first three months of 1912 amounting in value to \$3,309,000, representing the equivalent to 925,000 American boxes of 85 pounds each.

**PROVISION TRADE IN MEDITERRANEAN.**

[From Consul James Oliver Laing, Valetta, Malta.]

Certain customs exist in the food and provision trade in Malta, a knowledge of which would be of value to an American firm entering business here.

Most of the business is done on commission, and generally c. i. f. Malta. The local merchants prefer such a quotation. As there is almost no direct communication between New York and Malta, goods ordered by letter from Malta (about 11 to 14 days) might be sent via any one of half a dozen ports and the cost might vary considerably. Thus, goods are sometimes transshipped in Liverpool, sometimes in Antwerp, Hamburg, Marseille, or Naples. The Maltese merchant has some difficulty in figuring the total cost to him. Agents here do not like to give the cost of freight and handling, even when the route is known, without communicating with the port of departure in the United States, as it sometimes happens that rates from the United States to Malta differ from rates by the same route from Malta to the United States. It is advisable, for these reasons, to quote prices c. i. f. Malta. The freight rate from England on the classes of goods under discussion varies from 20s. to 25s. (\$4 87 to \$5.48) a ton.

Bacon imported into Malta is usually "cured middle cut." Each piece usually weighs 22 to 26 pounds. Hams are smoked and weigh 10 to 12 or from 12 to 14 pounds each. Lard arrives usually in tubs, although I have seen cans also. The tubs weigh 28 pounds each. Cheeses are pale or colored and weigh 64 to 70 pounds each. All these goods are quoted per hundredweight (112 pounds).

Canned fruit is usually the whole fruit. All kinds of canned fruit are imported, particularly peaches, pears, apricots, and pineapples. Canned asparagus is also in demand. The cans of fruit most in demand weigh about 2½ pounds each. They come here packed 24 cans in a case. Most of these canned goods are brought from England. Were American merchants to get into direct connection with commission merchants here it would reduce the cost to the Malta merchant and I believe would increase the sale of American goods. [A special list of Malta commission agents may be had from the Bureau of Manufactures.]

---

**NEW LIFE-SAVING JACKET.**

[From Consul General John L. Griffiths, London, England.]

A public test was recently carried out in the Thames of the Carroll life-saving jacket. During the demonstration this apparatus was used by a lady and three men. The garment consists of a loose sack, about the length of an ordinary lounge jacket, having a ribbing fitted with a substance of greater buoyancy than cork. It is so constructed that the heads of the users are completely out of the water, thus permitting them to take food while in the water.

---

The Vancouver Exhibition will be the largest of the next fall fairs to be held on the mainland of British Columbia, and Vice Consul General G. C. Woodward sends a booklet giving the prize list, which is filed for public reference at the Bureau of Manufactures.

**OPERATIONS OF BRADFORD CONDITIONING HOUSE.**

[By Consul Augustus E. Ingram.]

A revised edition of the regulations governing the operations of the Bradford conditioning house was recently issued [copy of which was transmitted to the Bureau of Manufactures]. The handbook contains in addition to the general information as to the testing instructions, charges, reception of goods, etc., an interesting description of the various tests for moisture, fatty matters, etc., of yarn, counts, and strength of yarn and cloths, measurement of piece goods, analyses of cloth, approximate proportions of various fibers in yarns and fabrics (by means of dissection and classification and verified by chemical tests and microscopical examinations), etc. A statement of standard regains and allowances for moisture, etc., is also given as established at Bradford and various Continental conditioning houses, together with table of results and regains, worsted counts of yarn in the single, and various systems of counting yarns.

The weight of goods passed through the Bradford conditioning house for testing purposes in 1911 amounted to 96,070,738 pounds, and the number of tests was 237,967.

---

**ENGLISH ELECTRICAL INSTRUMENTS.**

The Bureau of Manufactures has issued a monograph dealing with the manufacture of electrical instruments in England, as a result of the investigations of Commercial Agent H. B. Brooks, in which the works of seven leading electrical firms are described in detail. In discussing the labor conditions at each of the shops, the number of employees, the hours of labor, the wages paid, and the relations existing between organized labor and the employers, etc., are all dealt with. Much attention is given to the equipment of the shops, and a number of novel installations are described. More space is devoted to the nature of the products than to any other feature, and some of the new instruments are described at some length. The country of origin of the materials used in the manufacture of instruments and the markets for the finished products are given. A section is included on the use of electrical switches in England, with suggestions for the introduction of American goods, and the final chapter is devoted to the seventh annual exhibition of the Physical Society of London. Copies of the book may be had free on application until the bureau's supply is exhausted.

---

**SALINA CRUZ A COMMERCIAL PORT.**

The Department of State is in receipt of a note from the Mexican ambassador at Washington stating, in behalf of his Government, that the President of Mexico has directed that Salina Cruz shall hereafter be considered a commercial port [Salina Cruz is the western terminus of the Tehuantepec Railway.]

In explanation of the term "commercial port," the ambassador states:

The phrase "commercial port" is used in contradistinction to "military port," as the Government of Mexico has decided not to fortify the port of Salina Cruz for the present, notwithstanding that heretofore and under the administration of President Diaz some work had been done at that port preparatory to its fortification.

## PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 697. Navy Department supplies.**—The Bureau of Supplies and Accounts, Navy Department, Washington, D. C., will receive bids until July 9, 1912, for the following supplies; firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 4645, watch mark braid; schedule 4644, wire lamp guards, safety matches, white-wood fiber plaster, salt-water soap; schedule 4643, battle lanterns, nonwatertight portables, semifinish steel bolts and nuts, steel machinery nuts, soft sheet copper, crude petroleum; schedule 4640, galvanized steam wrought pipe, galvanized and black wrought pipe, flat medium steel, galvanized sheet steel, asphaltum varnish, dammar varnish; schedule 4638, plow steel hoisting wire rope, copper tubing, name plates, tool steel; schedule 4647, cotton waste; schedule 4646, steel conduit, brass conduit, steel and iron conduit fittings, brass conduit fittings, brass goose-necks, insulator hangers, clamp porcelain insulators, galvanized pipe straps, galvanized-iron malleable unions, brass unions, brass washers; schedule 4641, steel bolts and nuts, spur rim rolled brass grommets, hardware, reversible mortise locks, rim locks for metal doors; schedule 4642, white cedar, Oregon pine, white pine, yellow pine, redwood for pattern making, white spruce; schedule 4636, mild rod steel; schedule 4639, structural steel, structural angle steel; schedule 4648, alcohol in tank cars, white lead in oil.
- No. 698. Brick dormitory and water system.**—Proposals will be received at the Indian Office, Washington, D. C., until June 20, 1912, for furnishing materials and labor for the erection of a brick dormitory and installation of extension to water system at the Cut Bank Boarding School, Blackfeet Reservation, Mont., in strict accordance with the plans, specifications, and instructions to bidders, which may be examined at the Indian Office, the office of the supervisor of construction, Denver, Colo., the United States Indian warehouses at Chicago, Ill., St. Louis, Mo., and Omaha, Nebr., the Builders and Traders' Exchange at Minneapolis, Minn., and at the school. For further information apply to the Superintendent of the Blackfeet Indian School, Browning, Mont.
- No. 699. Sidewalks, curbs, etc.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until July 1, 1912, for sidewalks, curbs, etc., at the United States post-office building, Beverly, Mass., in accordance with the drawing and specification, copies of which may be obtained from the superintendent of construction of the building, room 144, Post Office and Subtreasury Building, Boston, Mass., or from the Supervising Architect.
- No. 700. Earth mounds and grading.**—Proposals for earth mounds and grading at the new target range, Naval Academy, Annapolis, Md., will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until June 22, 1912. Specifications can be obtained on application to the bureau.
- No. 701. Post-office equipment.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until July 18, 1912, for the mechanical equipment (except freight elevator and lift) of the United States post office at Jersey City, N. J., in accordance with drawings and specification, copies of which may be obtained at the office of the superintendent of construction, Jersey City, or from the Supervising Architect.
- No. 702. Gasoline engine and parts.**—Sealed proposals for the purchase of gasoline engine and parts, removed from the United States launch *St. Helena*, will be received at the United States Engineer Office, room 325 Customhouse, New Orleans, La., until June 22, 1912. Information on application to Lansing H. Beach, Lieutenant Colonel, Engineers.
- No. 703. Vent stacks.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until July 16, 1912, for increasing the height of the vent stacks at the United States post office and courthouse, Grand Rapids, Mich. Copies of specifications can be obtained of the custodian of the building or from the Supervising Architect.

## FOREIGN TARIFFS.

### BELGIUM.

[From Belgian Customs Circular No. 3000.]

#### New Specific Rates of Duty.

The following specific rates of duty, provided for by the decree of August 14, 1911, went into effect in Belgium June 1, 1912, replacing the former ad valorem rate of 12 per cent on toilet soap:

[Kilo=1,000 grams=2.2046 pounds. Franc=\$0.193.]

Tariff No.	Articles.	Duty.
Ex 59....	Toilet soap:	Francs.
	Ordinary soap.....100 kilos.....	7
	Soap creams, hard soap for shaving, liquid soap and powdered soap, imported in small containers (boxes, tubes, cases, small bottles, jars, etc.) weighing not more than 250 grams.....100 kilos.....	60
	Soap creams and liquid soap, imported in containers weighing more than 250 grams.....100 kilos.....	30
	Medicinal soap.....do.....	40
	Soap in bars or round cakes, imported in boxes containing not more than three pieces; soap in [fancy foil or paper] wrappers and in leaf form.....100 kilos.....	40
	Toilet soap not specially mentioned.....do.....	18

NOTE.—The articles specified above are dutiable without tare allowance for the immediate containers, such as cardboard, paper, foil, and other wrapping. In assessing the duty, however, allowance is made for the weight of the wooden packing case, etc.

"Ordinary soap" includes plain, unscented soap, which may be used also for toilet purposes.

### BULGARIA.

[From Minister John B. Jackson, Bucharest; see also Daily Consular and Trade Reports for May 17, 1912.]

#### Regulations for Admission of Edible Cottonseed Oil.

The Bulgarian Government, on May 4, 1912, promulgated the following regulations for the admission of edible cottonseed oil, as provided for in a recent law:

Cottonseed oil shall have the following qualities: It shall be clear, almost odorless, yellowish in color, with taste similar to that of walnut oil; it shall not be bleached with

chemicals (chlorine and the like); it shall not contain more than 2.5 per cent of free acid; its density (at 15° C.) shall be from 0.922 to 0.93; its refraction index at 40° C. shall be from 58 to 59; its iodine index shall be from 101 to 117; it shall give Halphen and Becchi's reaction.

### AUSTRIA-HUNGARY.

[From American Ambassador Richard C. Kerens, Vienna.]

#### Tare on Oil Barrels.

In response to the complaint of an American oil company regarding the tare allowance in Austria-Hungary on barrels filled with lubricating oil from America, the Government has increased the amount of the tare allowance from 13 per cent to 17 per cent.

[From Das Handelsmuseum, Apr. 4, 1912.]

#### Commercial Treaty with Bulgaria.

At the end of March, 1912, after several weeks of negotiations, a commercial treaty was concluded between Austria-Hungary and Bulgaria. The treaty contains certain special tariff concessions on both sides. [Further details will be given upon the ratification of the treaty.]

### CEYLON.

[From Ceylon Government Gazette, Apr. 12, 1912.]

#### Proposed New Food and Drugs Ordinance.

The attorney general of Ceylon has prepared a draft of a proposed ordinance for the Government supervision of the sale, importation, etc., of food and drugs. This proposed ordinance enumerates the following punishable offenses in connection with foods and drugs: Injurious adulteration of any food or drug; sale of any food or drug not of proper nature, substance, or quality; sale of wrongly compounded food or drug; abstraction of any of the essential elements of any food or drug; importation of adulterated or impoverished foods. These are regarded as the principal evils at which the ordinance aims. A special section makes it an offense to sell condensed skimmed milk without clear indication of its character and unsuitability as a food for infants. The other offenses are of a subsidiary character. [A copy of the proposed ordinance is on file in the Bureau of Manufactures.]

### COSTA RICA.

[From the Official Gazette of Costa Rica, Apr. 28, 1912.]

#### Classification of Automobile Trucks.

The Costa Rican treasury officials have ordered that duty be charged on automobile trucks at the rate of 6 centimos per kilo. [Colon = 100 centimos = 46.5 cents. Kilo = 2.2046 pounds.]

### CHINA.

[From Handelsberichten, Netherlands, May 15, 1912.]

#### Special Surtax in Shanghai.

According to a Belgian consular report, a special surtax on imports and exports at Shanghai, China, was announced to go into effect

May 15, 1912. On goods previously subject to duty under the Chinese tariff the surtax was to be 3 per cent of the amount of the duties specified in the tariff, and on goods not formerly dutiable upon importation or exportation the duty was to be  $1\frac{1}{2}$  per cent ad valorem.

---

#### DENMARK.

[From Norval Richardson, secretary of the American Legation, Copenhagen.]

##### Proposed Continuation of Coal Duty.

A bill has been laid before the Danish Parliament proposing the continuation of the duty on coal, which is to expire at the end of 1912. The Danish Government is reported to have obtained a large amount of revenue from this duty during the past two years.

---

#### NEWFOUNDLAND.

[From the Board of Trade Journal, Apr. 25, 1912.]

##### Remission of Duty on Coal.

An act to amend the revenue act, recently passed by the Newfoundland House of Assembly, provides for the free admission of coal for domestic use, imported into the ports of Grand Bank and Fortune, under certain specified conditions. Previously no remission was allowed on coal imported at Grand Bank, while half the duty of 50 cents per ton was remitted on coal imported at Fortune, when used for domestic purposes.

---

#### PARAGUAY.

[From *Moniteur Officiel du Commerce*, France, May 9, 1912.]

##### Reopening of Customhouses.

It is announced that the customhouses of Villa Franca Vieja and Concepcion, which were provisionally closed, have been reopened, and the customhouse of Villa de Pilar has also been reopened. The customs administration is accordingly operative throughout the extent of the territory of Paraguay. [See *Daily Consular and Trade Reports*, Apr. 23, 1912.]

---

#### PORTUGAL.

[Document transmitted by Vice Consul General James L. A. Burrell, Lisbon.]

##### Port Charges at Lisbon.

There is on file in the Bureau of Manufactures a copy of the tariff of wharfage taxes which the Portuguese Government put in force in the port of Lisbon December 9, 1911.

---

#### ST. PIERRE AND MIQUELON.

[From *Journal Officiel*, France, Apr. 19, 1912.]

##### Importation of Nursing Bottles.

The importation into St. Pierre and Miquelon of nursing bottles with tubes attached is prohibited by the extension to these islands of the provisions of the French law of April 6, 1910, prohibiting the sale, exposure for sale, and the importation of nursing bottles with tubes.

**TRIPOLI.****Tariff Changes.**

Consul John Q. Wood has reported a number of tariff changes in Tripoli, promulgated by the Italian Governor General. Specific rates of duty are imposed on beer, spirits, and alcoholic liquors, and the following articles are put on the free list: Crude stone and earth, lime, rough slate, firewood and charcoal, straw for feed and bedding.

**Customs Regulations.**

Consul Wood has also reported certain changes in the customs regulations, partly in connection with the changes above mentioned. The Governor General has put in force new regulations regarding the sale and importation of spirits and has prohibited the importation of saccharine or saccharine products. Copies of the decrees in question are on file in the Bureau of Manufactures.

---

**NEW TELEPHONE SYSTEM FOR MEXICAN CITY.**

[From Consul Samuel E. Magill, Guadalajara.]

The Mexican Telephone & Telegraph Co., an American-owned concern with headquarters in Mexico City, has been granted a concession by the city of Guadalajara to put in an entirely new telephone system and give this city a service modern and up to date at a cost of about \$250,000 gold, with wires underground throughout this city.

While there are two telephone companies now serving this city, the service of each is insufficient and the operators inefficient, so that the business interests of the second city of Mexico will welcome a good service.

The representative of the company claims work will commence at once and that the system will be in operation in about 1½ years, also that, as American capital controls the company, American methods, apparatus, and material will be used wherever possible. He further claims that the company also plans to connect Vera Cruz on the east coast with Manzanillo on the west, thus giving long-distance telephone service between the connecting cities, which include some of the most important in the Republic—Orizaba, Puebla, Mexico City, Queretaro, Celaya, Guanajuato, and Guadalajara.

---

**PORTO RICAN COFFEE.**

The Porto Rican coffee trade proposes to establish a roasting plant in New York and endeavor to popularize the island's coffee in the United States. American imports of coffee reach nearly 1,000,000,000 pounds a year, yet imports of Porto Rican coffee last year were only 250,000 pounds. Porto Rico produces 30,000,000 to 45,000,000 pounds of coffee yearly, which are practically all sold in Europe, where it is said to bring excellent prices. However, the American market would prove more advantageous for the Porto Rican coffee grower if a demand for it can be created here. There is a Porto Rican industrial exhibit in New York which includes the island's coffee, and detailed information can be secured on any subject relating thereto by addressing the Porto Rican Bureau of Information, 501 Fifth Avenue, New York, N. Y.

**BRITISH ENGINEERING-STANDARDS COMMITTEE.**

[From Consul General John L. Griffiths, London.]

In view of the fact that inquiries are received from time to time at the London consulate general respecting various engineering standards of Great Britain the following details regarding the engineering-standards committee have been collected.

The committee was originally appointed in January, 1901, by the council of the Institution of Civil Engineers, to consider the advisability of standardizing various kinds of iron and steel sections. It was then composed of seven members, and the first meeting was held in February, 1901, when it was decided to approach the councils of the Institutions of Mechanical Engineers, Naval Architects, and of the Iron and Steel Institute in order to secure, if possible, their cooperation. These invitations were accepted, and the reorganized committee began work in April, 1901.

**Expansion of Work.**

In November of the same year it was suggested that the standardization of electrical plant should be undertaken, with the result that the Institution of Electrical Engineers was also invited to nominate members of the committee, and in June, 1902, the committee was accordingly enlarged.

The work as originally undertaken has thus from time to time been expanded, and numerous subjects have been considered. Some idea of their diversity may be suggested by an enumeration of the several sectional committees. They are: Main; finance; publication and calculations; sections and tests for materials used in the construction of ships and their machinery; steel castings and forgings for marine work; iron for shipbuilding and ships' cables; bridges and building construction; railway rolling-stock underframes and locomotives, with subcommittees on component parts and types, tires, axles, and springs, steel plates, copper and its alloys, iron for railway rolling stock, railway rails, tramway rails, tire profiles, screw threads and limit gauges, automobile threads, and also on small screws and screw heads, rolled and drawn sections, keys and keyways, pipe flanges, cement, vitrified-ware pipe, cast-iron pipes for hydraulic power, water, gas, and sewage, heating, ventilating, and house drainage, and for electrical purposes; electrical plant with subcommittees on generators, motors, and transformers, prime movers, physical standards, telegraphs and telephones, cables, electric tramways, and electrical plant accessories.

The main committee, with the sectional and subcommittees, now has a total membership of 321.

**Government Subsidies—Adoption of Recommendations.**

The funds necessary for carrying on the work were originally provided by the several supporting institutions; but inasmuch as it was deemed important to secure Government recognition a deputation waited upon the Prime Minister, with the result that the sum of \$14,599 was included in the estimates for the fiscal year 1903-4 as a contribution to the committee. The Government continued to subsidize the committee from 1904 to 1906 by grants equal to the amounts contributed by the several supporting institutions,

manufacturers, and others, and also from 1906 to 1909, but on a smaller scale. Since 1909 annual grants have been made by the Government.

In recognition of the work done by the committee—occasioned largely, no doubt, by the publication of the first report on the standardization of Indian locomotives—the Indian Government made a grant of \$4,866 in 1904; since then a permanent locomotive committee has been formed to consider questions submitted by the railway board in India, the expenses of which are defrayed by the Indian Government.

It is stated that the committee's recommendations of sizes and tests of materials continue to be more and more generally recognized and adopted. For instance, the British standard specifications for steel and marine boilers and for structural steel for shipbuilding have been adopted by the Admiralty, and also the standards for steel castings and forgings for marine purposes, subject to certain conditions required by the special character of naval work. The standard for Portland cement is being increasingly adopted, as also are the recommended specifications for railway material, tramway rails, railway rolling stock, steel frame buildings, steel for bridges and general building construction, and locomotives for India.

#### **Some of the Questions That Have Been Considered.**

Among some of the questions which the various sectional and subcommittees had under consideration during 1911 were the specifications for laminated bearings and buffing springs and for spring steel, in which some modification seemed advisable in order to avoid stressing the plates too highly; and, as the result of experiments, a formula for the deflection was approved in which the tensile strength on the plates of the finished spring was limited to about 70 tons per square inch. A revision of the report on the standard specification for structural steel for bridges and general building construction was also undertaken. In view, it is said, of the increasing use of British standards abroad, a table is to be added to the report on the testing of steel, giving the equivalents of British tons in pounds, so as to obviate confusion with the American ton of 2,000 pounds.

With regard to standard threads, nuts, and boltheads for use in automobile construction, the British fine-threads standard was adopted with two exceptions and the Whitworth dimensions across the flats with one exception for all hexagonal nuts and boltheads. Two of the smallest sizes in the former standard were altered, the modification consisting of 25 threads per inch instead of 26 and the substitution of a size having a full diameter of 0.281 inch for that having a full diameter of 0.270 inch.

Experiments were carried out, on behalf of the committee, by the National Physical Laboratory with a view to obtaining data respecting the breaking stress of hard-drawn wire of small diameter, such as telephone and telegraph wire. One important point was the investigation into the variation of strength due to the kinking of the wire. A comparison between the modulus of elasticity on 50-foot lengths compared with short straight lengths emphasized its importance, and it was recommended that this class of wire should be wound in coils of large diameter in order to minimize the weakening effect, which must be taken into consideration in erecting long lengths.

**Revision of Specifications—Publications—Electrical Standardization Conference.**

It may be added that the various original standard specifications are carefully revised from time to time in order to keep abreast with new inventions and improvements. It is pointed out, on behalf of the committee, that perhaps its most salient feature is the advantage which accrues to Great Britain in that it possesses a central organization from which information may readily be obtained, both as to standards and as to the causes that led to their adoption.

Some 57 reports on various subjects have been published and may be secured from the secretary [whose address is obtainable from the Bureau of Manufactures] at prices ranging from 60 cents to \$5.10 each. A minimum subscription of \$51.10 entitles the donor to receive a copy of each report as published and of each revised report and to be supplied with periodical information two or three times a year concerning the various subjects dealt with by the committee and early information of any revisions in hand.

Steps have been taken for holding at an early date—probably in London—a conference on international electrical standardization.

---

**HARMFUL EFFECTS OF SHORT-PAID LETTERS.**

[From Consul General Richard Guenther, Cape Town, South Africa.]

It seems necessary to repeat and emphasize the injury American merchants and manufacturers are constantly inflicting upon themselves by carelessness in the matter of definitely instructing their mailing clerks to affix the correct postage on letters (5 cents per half ounce) and printed matter, unsealed (1 cent per each 2 ounces) at the time of mailing to Africa.

The extract below is from a letter received from one of the largest department houses in South Africa. This letter simply states on paper a complaint repeatedly brought to my attention by merchants here, who have been subjected to this annoyance until it has ceased to be a blunder satisfactorily explained as a "mistake" or "oversight" or "we are always very careful," etc.

While writing, we think it wise to point out to you an oversight which frequently happens. From the attached you will notice three letters were received in one mail insufficiently stamped. Even less attention is given to circular and catalogue matter.

It not infrequently occurs that the addressee refuses to pay the fine and take delivery of short-paid letters, as a protest against the carelessness of Americans, especially in this matter.

I am aware that American consuls from all parts of the world are constantly bringing this matter to the attention of the merchants who are damaging not only their own but the interests of American foreign trade generally by carelessness in this regard. Still, I respectfully suggest that the widest publicity practicable be given to the self-inflicted injury these gentlemen are unnecessarily sustaining.

---

*French lingerie* was exported to the value of \$2,600,000 in the first quarter of this year, an advance of about 30 per cent over last year and of 100 per cent over 1910. This does not include ready-made clothing for women, which aggregated over \$6,000,000 during January–March, 1912, likewise a heavy trade increase. In addition the quarter's exports included \$4,000,000 worth of trimmed hats.

## INCREASED AMERICAN IMPORTS INTO LIVERPOOL.

[By Consul Horace Lee Washington, supplementing the commercial review printed in Daily Consular and Trade Reports for Apr. 10, 1912.]

The imports of American merchandise into the English port of Liverpool were greater last year than ever before in the history of the trade. The nondutiable goods arriving from the United States were valued at \$328,811,726, a gain of \$71,772 over 1910 and \$17,189,953 over 1909. The dutiable goods amounted to \$13,246,006 compared with \$12,658,699 for 1910 and \$13,533,311 for 1909. The principal nondutiable imports last year were cotton, bacon, hams, copper, lard, maize, animals, leather, skins and furs, apples, and canned salmon, in the order given. Tobacco, fruit (dried and in sirup), and molasses were the principal dutiable items of import.

The following table gives the quantities (hundredweight equals 112 pounds) and values of the principal articles imported from the United States for 1910 and 1911:

Articles.	1910		1911

## SOME AMERICAN PURCHASES THIS YEAR.

[Summary of declared exports to the United States through American consulates at certain places for the first three months of 1912.]

*Belgrade, Servia.*—Plum jelly, \$4,425; copper ore, \$116,505; goatskins, \$7,762.

*Grenoble, France.*—Shelled walnuts, \$292,954; kid gloves, \$429,643; photographic paper, \$37,628; all other articles, \$7,873.

*Cologne, Germany.*—Aniline salts and dyes, \$587,953; chemicals, \$63,061; paints and colors, \$69,429; pharmaceutical products, \$58,067; wine, \$61,082; mineral water, \$64,476; iron, \$33,513; all other articles, \$238,055.

*Cardenas, Cuba.*—516,144 bags of centrifugal sugar, \$5,331,256; 670,000 gallons "2d" molasses, \$21,755; 849 gallons honey, \$509.

*Matanzas, Cuba.*—Centrifugal sugar, \$10,038,476; molasses, \$61,600; all other articles, \$2,787.

*Tampico, Mexico.*—Crude oil, \$668,058; itxle, \$63,163, out of a total of \$827,700; an increase of \$732,204 over the same quarter in 1911.

*Matamoros, Mexico.*—Live cattle, \$28,254; cotton seed, \$16,070; all other articles, \$23,669.

*Monterey, Mexico.*—Argentiferous lead, \$1,806,655; bars fine silver, \$950,053; hides and skins, \$122,902; all other articles, \$120,427.

*San Salvador, Salvador.*—Coffee, \$670,224; all other articles, \$12,404.

*Panama, Panama.*—Ivory nuts, \$15,872; cocobolo, \$14,590; rubber, \$11,703; hides, \$26,197; all other articles, \$8,718.

*Para, Brazil.*—Rubber, \$6,512,165; cocoa, \$11,589; nuts, \$44,947; deerskins, \$12,899; all other articles, \$6,581,600.

*Manaos, Brazil.*—3,082,456 kilos rubber, \$6,200,435; 41,169 hectoliters Brazil nuts, \$269,624.

*Maranhao, Brazil.*—7,022 kilos deerskins, \$4,248.

*Tamatave, Madagascar.*—Mangrove bark, \$37,136; raffia, \$1,048; straw hats, \$2,217.

*Sydney, Australia.*—Copper, \$719,732; wool, \$358,081; calfskins, \$48,997; marsupial skins, \$173,518; rabbit skins, \$36,837; hides, \$98,041; shेरlings, \$19,606; tin, \$131,590; lumber, \$19,996; all other articles, \$40,557. To Philippines.—Flour, \$91,998; frozen meat, \$52,537; butter, \$21,835; canned meat, \$6,750; oats, \$4,770; frozen produce, \$4,561; all other articles, \$15,686. To Hawaii.—Frozen meat, \$17,303; sulphate ammonia, \$11,173; onions, \$6,812; all other articles, \$9,534.

## CHINESE WOOD OIL.

(From Consul General Roger S. Greene, Hankow.)

Szechwan wood oil is preferred in Hankow, as it is lighter in color than that produced elsewhere. About 30 per cent of the output is said to be manufactured in Szechwan, 50 per cent in Hunan and Kweichow Provinces, and 20 per cent in Hupei Province, mostly in the region about Ichang.

There are no statistics of production, but the customs returns give the following figures for shipments to foreign and Chinese ports for the past two years from Hankow, which is the principal shipping point: To foreign countries—1910, 15,889,600 pounds; 1911, 12,285,733 pounds. To Chinese ports—1910, 84,804,666 pounds; 1911, 65,682,266 pounds.

**The Upward Trend of Prices.**

Prices during the last two years have varied between approximately 8 and 14 taels per picul (133½ pounds), which at the present Treasury rate for the Hankow tael would be equivalent to \$3.90 and \$6.83 for 100 pounds avoirdupois. Silver exchange has, however, fluctuated greatly during this period. The following prices were given me by a local firm, the "cents per pound" being deduced from the shilling-and-pence quotations:

Month.	Per picul of 133.3 pounds.	Per hundred weight of 112 pounds.	Per pound.
<b>1910.</b>			
January.....	<i>Taels.</i> 8.70	<i>s. d.</i> 28 3	<i>Cents.</i> 6.136
April.....	9.10	29 3	6.354
July.....	9.70	29 9	6.461
September.....	10.20	31 6	6.842
<b>1911.</b>			
January.....	10.65	32 3	7
April.....	11.60	34 0	7.387
July.....	12.50	35 6	7.711
September.....	13.40	36 9	7.981
<b>1912.</b>			
January.....	12.20	30 0-41 0	8.455-8.467
April.....	10.70	25 3	7.657

The last two columns of the above table represent prices c. i. f. New York.

**Primitive Extraction Methods.**

The oil is produced in small quantities by individuals, collected by Chinese middlemen, and sold to foreign merchants at Hankow who clarify the oil (by allowing it to settle) and pack it for shipment. The oil consigned to the United States is shipped in oak barrels. The bulk of it goes via Suez to New York.

Primitive native methods are used for extracting the oil, and under present conditions it is not felt that a modern crushing plant could be successfully established for producing wood oil, though a suitable decorticating machine would be welcomed.

**American Experiments—Imports.**

In experiments conducted by the United States Department of Agriculture in the Gulf States and California the China wood-oil tree has shown itself capable of fruiting and has produced a fair crop of

fruit. The department states that it feels very much encouraged over the results of its experiments. Should the tree prove commercially successful, its culture would be limited to the Southern States.

Official records show that imports of nut oil into the United States from China during the last five fiscal years had a value of \$800,550 in 1907, \$678,299 in 1908, \$794,257 in 1909, \$822,371 in 1910, and \$2,176,309 in 1911. These totals include wood oil, which is not separately stated in available data.

Among earlier references to China wood oil appearing in Daily Consular and Trade Reports were the articles published July 22 and August 25, 1908, and June 26, 1911.

---

### THE QUESTION OF PRICE LISTS AND AGENCIES.

[From Consul Lester Maynard, Harbin, China.]

Recently a number of opportunities have occurred for the sale of American manufactures in Harbin, and catalogues from the consulate files have been referred to; but in each case price lists had not been included, and as the demands were urgent but did not justify cabling for prices, due to the high cable charges, no business resulted. Unless the intending importer has some means of having an English catalogue translated, or unless he is aware of the fact that American consuls are always prepared to assist him in this regard, a catalogue in English is of little value; but in addition to this, when the prices are omitted the consul is equally helpless and the catalogue is useless.

One difficulty encountered at Harbin in the consulate's efforts to assist American manufacturers is the fact that this office is not advised by the manufacturers regarding their agencies for China; and in a number of instances American manufacturers have declined to either place agencies or sell direct to Harbin dealers, on the ground that they have "given the agency for the Russian Empire" to a Moscow merchant, and seem to be under the impression that, because nearly all the Harbin merchants are Russians, this would exclude them from purchasing direct. Whether or not these manufacturers have given exclusive agencies for China does not appear.

At the present time considerable business could be done in Harbin with American typewriters, but the local dealers, being unable to purchase direct, are forced to buy from a Moscow agent who has paid the Russian customs duty and extra and unnecessary freight charges with the result that the price of typewriters here is almost prohibitive. Similar conditions apply in a number of other lines.

---

### THIN PAPER FOR VENEZUELA.

[From Consul Thomas W. Voetter, La Guaiara.]

A member of a Venezuelan firm which handles much American paper has stated that a large proportion of paper for business uses, typewriter work, etc., comes from the United States. He stated, however, that for social uses and for ordinary letter writing he had to order paper from Italy, as American makers did not seem to make the light weights desired, nor with the rulings to which the people were accustomed. It is the custom to use the Continental square envelope. As postage rates here are high the reason for the preference for light papers is apparent.

**ARGENTINE BUSINESS NOTES.**

[From Vice Consul General Albert G. Elert, Buenos Aires.]

**Art Scholarships—Natural History Event.**

The Government of Argentina has set aside \$12,738 for one-year scholarships in Europe for painting, sculpture, music, and art. These scholarships are to be awarded by the National Commission on Fine Arts to 10 students passing a competitive examination.

The first hippopotamus said to be born in South America first saw daylight in the Zoological Gardens in Buenos Aires on April 30. [The rearing of young "hippos" in captivity is assuming some importance, especially in Europe, while Central Park, in New York, has been selling an average of about one young animal yearly for a decade. A young hippopotamus is worth about \$2,500.—B. of M.]

**Coal Deposits—Railway Concession Lapsed.**

In 1903 the Minister of Agriculture sent an expert into Neuquen Territory to report on coal deposits. The report confirmed the existence of two coal fields in Chos-Malal district, one northward, the other southward. No action has yet been taken by the Government for their development.

The cable companies operating in Argentina have reduced their rates 20 cents from May 1.

The Government has declared as lapsed the concessions granted to F. Mulhall for a railway line from San Blas to Choele-Choel, with a branch to Carmen de Patagones; also for a port at San Blas.

**Importation of Eggs—Wine Industry—Rival to Sugar Cane.**

During 1911 Argentine imports of eggs amounted to 1,090,891 kilos (kilo=2.2 pounds), valued at \$210,445, as compared with 1,274,280 kilos, valued at \$245,934 in 1910. The duty collected on these importations was \$25,264.

The wine industry of Argentina during 1911, as supplied by the 3,725 wine establishments on the register, showed that 3,160 worked during the year, dealing with 583,781 tons of grapes and producing 390,093,381 liters (liter=1.05 quarts) of wine, a yield equivalent to 66.8 per cent.

Experiments are being conducted in Tucuman with a process of making sugar from cornstalks. It is also announced that a corn-sugar factory will shortly be established in the Province of Buenos Aires.

**Insurance Declarations.**

In reference to the petition of insurance companies asking for the annulment of the resolution of the Inland Tax Administration of October 26, rejecting their request that they may be exempted from presenting sworn declarations of the reinsurance which they effect with foreign insurance offices, the Minister of Finance has confirmed the resolution, because the insurance with foreign offices is subject to a tax of 7 per cent in the premiums, except that for life insurance, which pays 2 per cent, and for agricultural insurance, which is free from taxation, while the national offices pay nothing for the premiums on the last-mentioned insurances, and only one-half of 1 per cent on life insurance and 1.4 per cent on the premiums for other kinds of insurance. It is deemed necessary that the administration be sup-

plied with sure proofs of the foreign insurances effected, whether direct or by reinsurance.

**Falsified Yerba Maté—Tobacco Profits—Sales of Rural Property.**

The National Council of Hygiene has been making an investigation and has reported that the greater part of the yerba maté ("Paraguayan tea") elaborated in Argentina and sold in the stores is composed of ingredients, the principal one of which is "congonilla." The Commercial Defense League has taken the matter up and the Minister of Agriculture has been invited to make an inquiry into the allegations.

The Compañía General de Tabacos made a profit in 1911 of \$130,948 on a paid-up capital of \$424,600.

The total sales of rural property throughout the Republic during 1911 is estimated at 33,858,079 acres, realizing \$152,441,843.

**Strikes and Accidents to Workmen.**

According to official statistics, there were 887 strikes in Argentina from January 1, 1907, to December 31, 1911. The total strikers numbered 232,138, with an average of 248 workmen to each strike. During 1911 there were 102 strikes, 7 (6.9 per cent) resulting favorably to strikers, 3 (2.9 per cent) partly favorable, and 89 strikes (87.2 per cent) negatively.

The following figures relating to accidents to workmen are taken from a recent official publication:

Year.	Fatal.	Serious.	Slight.	Total.
1907.....	37	132	651	820
1908.....	90	279	1,263	1,632
1909.....	77	338	1,427	1,842
1910.....	114	343	1,721	2,178
1911.....	103	174	2,067	2,344

The total number of accidents during the five years was 8,808, of which 421, or 4.8 per cent, were fatal.

**Instruction Books for Immigrants.**

The Dirección General de Inmigración has ordered the printing of passbooks which will be furnished newly arrived immigrants. The books are headed "This passbook is to be returned to the Dirección General de Inmigración when its owner, the immigrant of to-day, may be the employer or landowner of to-morrow." The book contains a personal description of the immigrant, ink thumb impression, and other data, whereby the owner may be identified. It also contains the name of the country from which the immigrant came, the port of embarkation, and the date of his arrival in Argentina. Then follows a commendation addressed to the national, provincial, and territorial officials and individuals asking that the newly arrived immigrant be kindly received and treated, etc.; a portion of the national constitution relative to the form of government in the Republic; extracts from the immigration laws defining the rights and duties of immigrants; the forms of labor contracts that may be used; the names of the national and foreign banks; the names of steamship agencies; a table for the conversion of foreign money into the currency of Argentina; a note from the Minister of Agriculture referring to the measures taken for the protection of immigrants and others; the installation of exhibits of agricultural machinery in the immigrants'

hotel in order that they may learn its operation in the first few days after their arrival are also contained in the passbook.

[From Consul General R. M. Bartleman, Buenos Aires.]

#### **Aerial Fleet for Argentine Navy.**

A Buenos Aires paper makes the following announcement:

The Sociedad Sportiva Argentina has made an offer to the Minister of War, General Gregorio Velez, of an aerial fleet, to be subscribed for by the public, for which purpose 1,500,000 illustrated postcards will be issued. In connection with this issue there will be a competition of drawings allegorical of aviation in its application to the art of war. [The competition closed on May 10.] The commission appointed to organize the raising of the funds for providing an aerial fleet is as follows:

Honorary presidents: The Minister of War, Gen. Gregorio Velez; the Minister of Marine, Rear Admiral Juan P. Valiente. President: Baron Antonio de Marchi, president of the Sociedad Sportiva Argentina. Vice president: Señor George Newbery, president of the Argentine Aero Club. Honorable secretary: Maj. Arturo P. Sinsoni. Members: Gen. Ramon Ruiz, Chief of the Staff; Rear Admiral Manuel Domecq Garcia, President of the Centro Naval; Col. Martin Rodriguez, Secretary of the Ministry of War; Col. R. Sarmiento, inspector of engineers; Señor Eduardo Hunter, vice president of the Sociedad Sportiva Argentina; and the directors of all the press organs in the city.

#### **RICE TRADE OF OMAN.**

[From Consul Homer Brett, Maskat.]

Rice is by far the largest item of import into Maskat, and the trade, though not so great as it formerly was, is still large. Maskat was once the distributing center for a considerable territory, but of late this position has been taken by Debai, the reason being that at that point no duty is imposed and the 5 per cent collected here is sufficient to prevent the local merchants from competing.

Exact figures of the amount of rice imported annually are unobtainable, but it is certainly not less than 100,000 bags of 168 pounds each, or 8,400 short tons. All of this comes from Calcutta and, at present, consists entirely of Bengal rice of two qualities, the Ballam and the Rari. The former costs in Calcutta \$2.80 per bag of 168 pounds; freight to this port is 32 cents, and duty and landing charges 24 cents, making the total Maskat cost per bag \$3.36, the Rari grade being about 16 cents cheaper. Credits of 3 to 9 months are given and no security is required, the purchaser's standing and reputation being the only guaranty of payment. The trade is largely in the hands of Banians or Indian merchants.

The present (April) prices made to retailers are \$4.01 cash or \$4.12 credit per bag. When Rangoon rice was \$1.95 per bag it was largely imported for the use of the poorer population, but the price having risen it is not now brought in, as the Bengal grain is preferred unless the difference in cost is considerable.

#### **MONTEVIDEO TO PANAMA.**

[From Consul Frederic W. Goding, Montevideo, Uruguay.]

The Pacific Steam Navigation Co. steamers now sail from Liverpool, via Montevideo and other ports, to Panama, calling at the same ports on the return voyage. Travelers from the United States coming down the east coast may now take the west-coast journey by taking first-class steamers here, without the transfer at Callao as was formerly the case.

**RUSSIAN STATE FORESTS.**

[From Consul John H. Grout, Odessa, Russia.]

While the privately owned woodland of Russia is being annually reduced in area, the extensive State forests, generally less accessible and farther away from well-developed trade routes, are but gradually being brought into use, and for a long time to come they will continue a welcome and important reserve timber supply for the world. In round numbers these forests cover 937,000,000 acres, a fair proportion of which is well stocked.

The increasing utilization of the State forests is shown by the growth of gross receipts therefrom. In 1885, the gross receipts amounted to \$7,176,010; in 1890, \$9,486,300; 1895, \$14,915,945; 1900, \$28,838,455; 1904, \$31,132,780; 1909, \$34,343,290; 1910, \$38,610,580; 1911, \$42,525,610; yet even this last total is only about 24 kopecks per dessiatine (12 cents per 2.7 acres).

Much of the timber apportioned for cutting can not be placed. This remains standing and harms the new growth. Measures are now contemplated for bringing this timber into the world's markets. Roads will be made, and over 1,000 new officials will be added to the staff of foresters, and many more keepers. Much is also intended to be done for the improvement of the condition of the forests.

**SWISS FACTORY STATISTICS.**

[From Commercial Agent Archibald J. Wolfe.]

The following statistics show the preliminary results of the Swiss Federal census of 1911 regarding Swiss factory enterprises:

Trades.	Factories.	Employees.		
		Male.	Female.	Total.
Cotton trades.....	326	11,617	17,632	29,549
Silk industry.....	215	7,735	23,802	31,537
Woolen industry.....	67	2,190	3,135	5,325
Linen industry.....	24	440	567	1,007
Embroidery.....	866	11,787	16,822	28,609
Other textile trades.....	112	1,517	2,633	4,150
Clothing and outfitting.....	660	8,789	16,061	24,850
Provisions and alimentary trades.....	084	13,440	12,804	26,044
Chemical industry.....	198	6,967	1,725	8,692
Centrals for power, gas, and water.....	263	4,254	1	4,255
Paper and graphic trades.....	625	13,227	4,930	18,157
Woodworking trades.....	1,268	23,333	432	23,765
Metal working.....	623	21,865	1,460	23,325
Machinery, apparatus, etc.....	640	45,313	1,122	46,435
Jewelry and watchmaking.....	856	21,445	13,638	34,983
Clay and stone trades.....	441	17,180	1,000	18,180

**New Argentine Publications.**

Consul General R. M. Bartleman has sent from Buenos Aires copies of (1) the English Standard Dictionary of Argentina for 1912, (2) the Annual Report of the Buenos Aires Commercial Exchange, and (3) the Manual de la Bolsa de Comercio de Buenos Aires, all of which are placed in the public reference library of the Bureau of Manufactures in Washington. Copies of the publication last named may be purchased from G. E. Stechert, 151-155 West One hundred and twenty-fifth Street, New York, at \$3.40 each.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 9036. Removal of rock.**—The American minister at Bucharest, Roumania, reports that the question of the removal of about 36,000 cubic meters of conglomerate rock at the bend of the Danube River near Toultscha (Tulcea) is being considered by the "Commission Europeenne du Danube" and that it is thought probable that the work will be carried on by the administration (regie) itself. If any Americans care to secure further particulars regarding this enterprise it would be advisable for them to communicate directly with the commission at Galatz, Roumania, at once.
- No. 9037. Steel pipes, valves, and hydrants.**—The American consulate general at Vancouver, British Columbia, Canada, reports that tenders will be received until June 24, 1912, by the Clerk, Municipal Council, Kerrisdale, for supplying about 8 miles of steel pipes, varying in diameter from 4 to 18 inches; also for valves and hydrants. Particulars may be obtained at the office of the engineers, Cleveland & Cameron, 506 Winch Building, Vancouver, from whom copies of the specifications, schedules, etc., can be obtained also. Tenders will not be considered unless made out on the forms supplied.
- No. 9038. Wharf construction.**—The American consul general at Ottawa, Canada, reports that the Department of Public Works, Ottawa, has advertised for tenders, to be received until July 4, 1912, for the construction of a wharf at Brundagee Point, Westfield, Kings County, New Brunswick, and for constructing a pile bent wharf at Needles, division of Arrow Lake, District of Kootenay, British Columbia. Plans, specifications, and forms of contract can be seen and forms of tender obtained at the Department of Public Works at Ottawa.
- No. 9039. Paper for tobacco monopoly.**—A report from the American minister at Bucharest, Roumania, states that bids will be opened for supplying paper in sheets and rolls for the use of the Roumanian tobacco monopoly for three years, beginning January 1, 1913. Information in regard to quantity and conditions can be obtained upon direct application to the "Direction Generale" of the Government monopolies, Calea Victoriei 127, Bucharest, Roumania, and American manufacturers who contemplate submitting bids should communicate with that office.
- No. 9040. Public works by European municipality.**—An American consul in a European country has forwarded a list of public works to be undertaken by a municipality in his district, with the amounts to be expended in each case. The undertakings include improvements to school buildings and the erection of new ones, sewerage extension, construction of water mains, railway bridges, extension of railway tracks, improvement of markets, etc. The detailed list can be obtained from the Bureau of Manufactures.
- No. 9041. Heating apparatus, clocks, and church equipment.**—A parish in France is breaking ground for the construction of a new cathedral church building. The new edifice is to be of stone, and will cost about \$400,000. American manufacturers and exporters of heating apparatus, tower clocks, and other equipment for church buildings and cathedrals should address catalogues and descriptive matter to the architect, whose name is furnished by the American consul who forwarded the report.
- No. 9042. Dry dock and shipbuilding plant.**—An American consul has forwarded a copy of a concession granted by the local government to a business firm for constructing a dry dock and shipbuilding plant, the latter to consist of machine shop, electric cranes, marine railways, shipways, ships and channels, and wood-working shops, boiler shops, pattern houses, paint shops, storehouses, timber sheds, power house with its electrical equipment, and all other necessary equipment to a first-class shipbuilding plant capable of building ships of 20,000 tons register capacity. The company must expend in this work not less than \$6,000,000. Copy of the complete report, containing detailed information, will be sent to interested firms upon request.
- No. 9043. Field trials for furrow-making plows.**—The American consul general at Cape Town, South Africa, has forwarded a copy of a letter from a society announcing field trials in plows for furrow making, which will probably take place about March 1, 1913. Prizes are offered for the best implements. Copies of the announcement, etc., will be sent by the Bureau of Manufactures to American firms interested.

# DAILY CONSULAR AND TRADE REPORTS

ISSUED BY THE BUREAU OF MANUFACTURES, DEPARTMENT OF COMMERCE AND LABOR

15th Year

Washington, Friday, June 21, 1912

## MEDICAL AND SURGICAL ARTICLES IN CHINA.

[From Consul General George E. Anderson, Hongkong.]

There have been great fluctuations in the trade in medical and surgical apparatus and instruments in China since such modern goods were introduced. The United States has had a considerable share, shipping direct at one time about 25 per cent of the total imports, not including the portion of imports received from American manufacturers through Great Britain, Hongkong, and other countries. Of late years the most notable feature of the trade has been the increasing share Japan has had, partly explained by indirect imports from the United States and other countries through Japan. The trade has averaged in late years about \$250,000 gold annually, imports during the three years previous to 1911 being as follows:

Imported from—	1908	1909	1910
Hongkong .....	\$11,970	\$10,725	\$11,584
Great Britain .....	63,715	62,174	41,727
Japan .....	35,330	31,465	39,337
United States .....	49,120	18,518	13,044
Germany .....	18,517	12,101	8,680
All other countries .....	14,033	13,935	15,417
Total .....	212,685	148,918	129,789

There is great variation in the amount of such goods taken from year to year in the various ports, the explanation being that as modern hospitals and similar institutions are installed each port draws unusually upon the world for its equipment. For example, of the unusually large imports in 1909 Shanghai took almost exactly two-thirds. Tientsin also imported heavily that year. Ordinarily Shanghai imports about half of the total, Tientsin about a sixth, Dairen, Canton, and other open ports taking various shares from year to year as demand occasions.

### Practitioners and Their Preferences.

The demand for medical and surgical equipment in China and the trade field reached through Hongkong varies in large degree accord-

ing to the nationality of practitioners. The physicians and surgeons in practice in this part of the world consist largely of missionary physicians and surgeons and English consular or port physicians and surgeons who either engage in general practice or, more generally, engage in practice in connection with some institution or service like the Chinese customs service. There are a few German and French physicians, but English and Americans are more numerous. It is significant that a physician usually prefers surgical instruments or appliances from his own country, the natural result being that most American imports in surgical lines are for missionary hospitals, while most English imports are for general practice in the open ports, though of course such is not the invariable rule. Considerable American medical goods are imported through Great Britain and Germany.

#### **Dental Appliances and Apparatus.**

In dental appliances, apparatus, instruments, and conveniences American goods control everything in high-class trade. American dentists have practically all the high-class business in their line and naturally prefer American equipment, while the merit of American appliances generally commends them to Japanese and other foreign-trained dentists practicing in this field. The number of Japanese and Chinese dentists practicing in Hongkong and the open ports in China is increasing greatly; the business, therefore, also expanding. Many of these practitioners are trained in the United States, some in Japan, and many learn their profession more or less perfectly as assistants in the offices of foreign-trained practitioners here. Chinese of the upper and middle classes are resorting to these foreign-trained dentists more and more frequently and prospects for the profession among these native practitioners are bright. However, for a number of reasons, as, for example, small fees received for most of such native work, the practice is not likely to attract highly trained American or other foreign dentists. The general increase in practice among native-trained men naturally affords increasing demand for materials and equipment.

Both in medical and surgical and in dental equipment there are indications that European trade in such lines is likely to be seriously threatened in the near future by Japanese and other Asiatic production, but high-grade practitioners will constantly demand American or European equipment, and the increased use of all such goods in connection with the changing life and manner of living in China affords a constantly widening market for American manufacturers in these lines which merits attention.

#### **Expanding Trade in Medicines.**

There has been a most satisfactory and significant growth of the trade in foreign medicines in China during the past few years, and the attention of American manufacturers and exporters of medicines and medical preparations should be given the field. The aggregate imports of foreign medicines into China at present amount to about \$2,000,000 gold annually, while imports into Hongkong for distribution into parts of the Far East other than China increase this total somewhat. Of the imports into China Hongkong furnishes about two-thirds, the goods actually proceeding largely from Great Britain, which also sends direct about 20 per cent of the total. One

of the significant features of the trade is the manner in which Japan's shipments of medicines into China have increased lately. The general situation of the trade is indicated in the following table of imports of medicines for three years previous to 1911:

Imported from—	1908	1909	1910
Hongkong.....	\$1,025,045	\$1,091,480	\$1,294,778
Great Britain.....	104,404	257,544	325,730
Japan.....	153,747	181,912	252,189
United States.....	15,752	19,623	29,630
All other countries.....	98,207	152,489	178,214
Total.....	1,397,155	1,701,048	2,080,541

While these returns show that the United States has but a small portion of the trade, American products are really taken in much greater amounts than are thus indicated. Some of the imports into China from Hongkong are of American goods imported into Hongkong from the United States direct, but the greater portion of American goods of this class generally is shipped by British branches or agents of American manufacturers and are therefore credited to Great Britain instead of the United States. The total trade in American goods is a considerable portion of the whole and the increase in the trade in general is largely in American goods. Pharmacists here say that the chief reason for this is the fact that Americans concerned in the trade are selling high-grade goods and selling them in more convenient and attractive form than their European competitors.

American goods also are becoming more and more popular because they are now marked as to their exact contents, a convenience which European goods do not have. However, there is not much question but that American trade in these lines can be considerably extended. The drug and medicine trade proper consists largely of imports of quinine, various preparations of Epsom salts, castor oil, calomel, and the like; tincture of iron and various tonic preparations; and in general the variety and proportion of drugs used and sold in the United States 15 or 20 years ago.

#### Character of Goods in Demand.

The trade in foreign patent medicines of many sorts is constantly increasing and several brands of goods are being introduced in large volume. The last English mail ship into Hongkong, for example, landed 500 cases of a certain brand of pills manufactured by an American company and sold through English houses. These goods and similar goods are being sold well into interior districts of China in advance of all foreign medicine practice. Several of the latest standard American disinfectants for the toilet table (listerine, glycothymoline, etc.) are being sold in largely increasing quantities. There is a strong demand for American dental preparations and similar goods. The list of patent tonics, invalid foods, and the like, on sale here, is being increased considerably and several well-known American and English patent preparations have been on the market for several years and their sales are increasing.

There is a constantly increasing trade in all lines of druggists' novelties, rubber pharmaceutical goods, tooth and similar preparations, toilet waters, plasters, and miscellaneous druggists' stock

generally. The wealthier classes of Chinese are commencing to use these novelties and luxuries to a greater extent and the use of the simpler and cheaper foreign medicines by the other classes of Chinese who come into touch with foreign practitioners or their Chinese students is increasing. While, as indicated, the great mass of the trade in standard drugs is in lines often considered somewhat out of date in the United States, American forms of various drugs are increasing in popularity and there is unquestionably a chance for the sale of American goods if they are presented properly. The use of American drug preparations is made difficult to a considerable extent by the fact that practitioners in most eastern ports are largely British in training and connections and are not familiar with American goods.

About 12 per cent of the imports of drugs into China goes to Shanghai and about the same proportion to Canton. Hankow, Tientsin, Swatow, Amoy, Chungking, Wuchow, and other ports follow in the order named, the ports on the coast in South China taking a much larger portion of the trade proportionately to their population than the ports of the north. With the opening up of China to foreign ideas, which is attending the revolution in its government, there is every prospect of an immense expansion in this trade.

#### **Perfumeries and Toilet Accessories.**

As is generally the case in the United States, most of the retail drug establishments in Chinese ports, including the native shops in these ports and in the interior, so far as foreign goods reach, handle perfumeries, toilet waters, and other toilet accessories in connection with their medicine trade. The import of such goods into China is increasing rapidly. One of the lines of foreign goods first used by many Chinese is that of cheap perfumery. The total imports of perfumery into China in 1910 amounted to a value of \$178,184, as compared with \$136,209 the year before, and total imports into the country, including the imports into Hongkong for local use and resale to other portions of the Far East, will reach at least \$225,000 annually. It is a trade capable of indefinite expansion, for the small peddlers and booth keepers in Chinese villages within reach of open ports handle these foreign perfumes as one of their chief novelties, and all classes of people buy the goods in whatever amount they may be able to afford. Of the imports into China at the present time Hongkong furnishes about one-fourth, the Netherlands about one-sixth, the United States and Japan each about one-eighth, with the rest divided among other nations in small proportion. The United States also furnishes a considerable portion of the imports from Hongkong. Shanghai takes over 30 per cent of the total imports.

There is a similarly growing trade in cheap toilet requisites of all sorts and it is a fact significant of the sort of goods which are popular that Japan in 1910 furnished about \$159,000 worth out of the total of \$281,000 imported. Hongkong furnished about one-sixth of the whole and Great Britain much of the balance. This class of goods includes particularly cheap face powders, tooth powders, small brushes, mirrors, combs of various sorts, sachets, and all those "novelties" which go to make up the stock of the Chinese peddlers or booth keepers who handle most of this trade. Considerable quantities of such goods are now made in Hongkong and in open ports in China.

One of the notable points to be considered in the trade in patent medical preparations and in perfumery and toilet requisites is the advisability of labeling the goods in Chinese or at least of wrapping them in special wrappers describing them in Chinese characters. The bulk of the trade in all such goods retailed to consumers is done in goods so marked.

### SUEZ CANAL OPERATIONS.

[Compiled from Reuter dispatch from Paris, and other sources, supplementing advance item in Daily Consular and Trade Reports for June 11, p. 1064.]

The annual meeting of the Suez Canal Co. was held on June 3. The annual report showed that the year's operations had been brilliantly successful. The total receipts were \$26,870,516, an increase of \$843,656 over the previous year. This result exceeded all expectations, the loss entailed by the reduction of 10 cents per ton in the tariff being far more than made good, and justified a similar reduction to come into force on January 1, 1913. Thus, in three years, the tariff will have been lowered by 20 per cent.

After appropriating \$543,019 to the statutory reserve (making total \$6,747,915) and \$584,000 to the extraordinary reserve (making total \$1,549,000), the directors proposed to distribute \$16,950,112 (against \$15,908,419 in 1910), carrying forward \$66,000 (against \$42,114). In the statutory division of profits 71 per cent goes to stockholders, 15 per cent to the Egyptian Government, 10 per cent to the founders of the company, 2 per cent to the administrative officers, and 2 per cent to the employees.

The number of vessels that passed through the canal in 1911 was 4,969, representing a net tonnage of 18,324,794, an increase of 436 vessels, with a tonnage of 1,742,896.

From the following list of the six leading steamship lines traversing the Suez Canal it will be seen that the Ellerman Lines again had the greatest number of voyages.

Owners.	Tonnage.	Number of voyages.
Penninsular and Oriental.....	1,206,000	244
Ellerman Lines.....	1,158,200	286
Alfred Holt & Co.....	1,002,860	224
Hansa Line.....	847,600	215
Messageries Maritimes.....	603,400	172
Norddeutscher Lloyd.....	595,200	102

In recent years the rapidity and safety of transit have been greatly enhanced. A significant illustration was afforded by the passage of the Royal yacht conveying the King and Queen to and from India. The transits occupied only 12½ and 12 hours, respectively. Referring to the contributing sources of traffic, the report states that there was a falling off in cargoes of rice, of oleaginous grains, and still more notably of soya beans, the trade in which practically ceased owing to the plague in Manchuria. Again, business with China, from which such great things are expected in the future, was much hampered by the unsettled state of the country politically. On the other hand, there was great activity in the export trade of India, the consignments of grain reaching a figure never attained before. Trade with the Dutch Indies also developed largely, while Japan continued to extend commercial relations with Europe. Australia and the Oceanic Isles likewise contributed to the increased traffic. Brilliant as were the results of 1911, they have been more than maintained in the opening months of the present year.

### DESIRE FOR INDUSTRIAL EDUCATION.

The ambition to secure technical instruction along industrial lines in the United States seems to be spreading. The following note from the Bureau of Education at Washington is one of the many indications of this movement:

The high school at Manatee, Fla., needed an industrial building, and as no funds were available for the purpose, the school children built it themselves. It is a one-story structure, built of concrete blocks, 25 by 50 feet. The blocks were made by the grammar-school pupils, the high-school boys put up the walls and roof, and the girls nailed on the laths for the plastering. The school is called the Kendall Industrial Institute, in honor of the high-school principal, who designed and supervised the work.

**CEMENT PRODUCTION AND TRADE OF THE FAR EAST.**

[From Consul General George E. Anderson, Hongkong.]

The cement industry of Hongkong and vicinity, which is the enterprise of one corporation but includes works in various portions of the colony and at Macao and Canton as well, has long dominated the cement trade of southeast Asia and at times has had a not unimportant share in the import cement trade of the Pacific coast of the United States.

At the last general meeting of this company attention was called to the growing competition in cement making in the Far East. In the course of his discussion of the situation the presiding officer at the company meeting said:

Competition continues unabated but has somewhat changed in form. European shipments to the far East have decreased and in the main can be ignored. The establishment of new factories in near-by territory is what interferes with us most, and some of these are gradually improving the quality of their product and increasing their output. There are probably more factories in the East than the average man realizes; for, besides the numerous Japanese establishments, including Manchurian, we have those at Tongshan (Tientsin), in Hupeh on the Yangtze, at Haifong, at Kuala Lumpur, and a new one at Padang in Sumatra, and there may some day be one at Manila. To offset the rise of these establishments we have the ever-increasing call for cement. And if this increase continues in years of stagnation and troubled trade such as we have experienced lately, what may it be when China settles to a steady course and the inevitable railway building comes into full swing?

**Output of Existing Plants.**

No mention was made of the plant under the control of the Chinese Government at Canton, which is not in operation for the time being. The chief competition for Hongkong at present is coming from Haifong. The Manila enterprise referred to is under the control of a Philippine corporation organized for the purpose and is reported as well under way.

The total ordinary maximum output of the plants mentioned, which are now serving to a great extent much of China, particularly south of the Yangtze, the Philippines, Indo-China, the Malay States, and Siam, as well as other countries in lesser degree, probably aggregates more than 2,000,000 barrels annually. The maximum output, according to the best information available, consists of the following, in barrels of 375 pounds each:

	Barrels.
Green Island Cement Co. (Hongkong).....	780,000
Ciments P. A. de l'Indo-Chine (Haifong).....	300,000
Chee-Hsin Cement Co. (Tongshan, Tientsin).....	300,000
Hupei Cement Co. ....	288,000
Others.....	300,000

Maximum output..... 2,028,000

**China May Supply Its Own Needs.**

Competition with each other has prevented any one of the establishments concerned in this eastern trade from running at maximum capacity, and this is likely to be the case for some time in the future. But, while competition has been and is likely to continue to be exceedingly keen, there appears to be no sound reason why all these plants shall not remain in the field. Each of them has more or less difficulties to overcome, but each has notable advantage either in the way of convenient and abundant supplies or unusually good shipping

facilities, and all have cheap labor, fuel, and other supplies, and a constantly increasing demand for their product.

It seems quite likely, therefore, that the prospective increased demand for cement in China will be met with a complete and satisfactory supply in or near China.

[From Consul Stuart K. Lupton, Karachi, India.]

#### India's Trade Comparatively Small.

The cement trade of northwestern India is comparatively small, as may be seen from the accompanying table of imports for the past five years, which means practically the entire consumption in a district with a population of some 45,000,000 people:

Year.	Casks.	Value.	Year.	Casks.	Value.
1906-7.....	15,591	\$38,126	1909-10.....	36,497	\$83,390
1907-8.....	20,107	51,934	1910-11.....	33,095	75,579
1908-9.....	22,729	59,181			

Most of the cement imported is of British manufacture. The brands chiefly used are Victor, Rhinosceros, Gillingham, Peters, Elephant, Red Cross, and Pyramid among the English marks, with Gladiator as the principal German brand.

#### Prices and Consumption.

British cement is quoted by the manufacturers to-day [Mar. 23] at \$1.95 per cask, c. i. f. Karachi, and after paying a duty and handling charges is sold in smaller quantities to the consumer at \$2.09 to \$2.13 per cask. As freight rates from Great Britain are 20 to 25 shillings (\$4.87 to \$6.08) per ton, this means that cement must be produced at the shipping point for 50 or 60 cents a cask to realize a profit.

At the present time the Port Trust and the Karachi municipality are using about 1,200 casks of 400 pounds each every month; but this extraordinary work will soon close, and I am credibly informed that the average monthly consumption of cement for all purposes will be about 200 casks for the next eight months or a year.

#### TRANS-PERSIAN RAILWAY ENTERPRISE.

[Report of Reuter's Agency, supplementing reports in Daily Consular and Trade Reports for May 11 and 28, 1912.]

The British Government has accepted as completely satisfactory the proposals now made for the international control of the projected trans-Persian line for linking up the Russian and Indian railway systems. The Société d'Etudes being formed in Paris will consist of a council of administration of 24 persons, composed equally of British, French, and Russian members, and including a president and two vice presidents. The president nominated is M. Raindre, a French diplomat of the rank of ambassador, the vice presidents being Sir William Garstin and M. Homiakoff, ex-president of the Russian Duma. The other members will include the leading British, French, and Russian bankers and eminent British and Russian and Indian engineers. In addition, there will be a representative committee of direction.

The question of the break of gauge between the Russian and Indian systems, on which the Indian Government has already expressed its views, is one of the many questions to be settled, but Reuter's Agency is informed that no difficulty is likely to arise over this matter as Russia is quite prepared to meet the views of India on this question.

**COLOMBIA'S TRADE IN ALLIGATOR SKINS.**

[Abstract of an article in the London Times.]

Alligator skins were not exported from Colombia prior to 1901, in which year efforts were made to establish the business, with some degree of success. In 1904 there was only one firm in the field, and in January, 1905, this firm was granted by the Government the exclusive right to hunt the reptile and export the skins for a term of five years. Some 20 stations were soon established along the lower Magdalena River and its tributaries, and parties of Indian hunters were fitted out and instructed in the best manner of preparing the skins. Success followed, the annual exports for the ensuing years averaging 30,000 skins. The concession expired in January, 1910, and alligator hunting is now free to all. It is a promising industry, which will increase in importance, especially if the various products of the reptiles can be put to other uses, as is expected.

Three different kinds of alligators are found in the Magdalena River. The *babilla*, which has a blunt, short head, small though numerous teeth, a dark-colored back, a deep yellow belly, and seldom attains a length of 5 feet, is of no value for its hide, which is made up of bony scales that turn to a stiff, brittle shell as soon as removed from the animal's body. The *caiman de aguja*, or needle-snouted alligator, has a light yellow belly, with a greenish and spotted back, and sometimes exceeds 24 feet in length and 6 feet in girth. These have large teeth of beautiful white ivory, sometimes 5 inches long and 1½ inches in diameter. The largest skins are one-half inch thick and 80 to 90 square yards in area, but no use has yet been made of them, except as curiosities. The skins of this variety tan well, and have a pip mark in the center of each scale. The third class of alligators found in the Magdalena River is called the *caiman porro*, or thick, short-headed alligator. Its maximum length is not over 10 feet, and it has a pliant, merchantable skin, showing no pip marks.

**Unlimited Supply of Alligators—Trade Centers in the United States.**

There seems to be no likelihood of the extinction of these reptiles, whatever slaughter is carried on, as every full-grown female is said to lay about 100 eggs in a year. Alligator hunting is carried on along the Magdalena River from December to April and in July and August. During these rainless months the streams subside, draining the great alluvial plains which border the main stream. The alligators, which rushed out onto the inundated flats during the previous swelling of the river, crowd back through the connecting branches and channels, where the Indian hunters slaughter them in large numbers, spearing them and hauling them out on the banks, where they are stunned and then beheaded with long-handled axes. Rifles are not used owing to the prohibition of the use of firearms, except shotguns. Hundreds of alligators are also left stuck in the deep slime left by the receding waters, over which their short legs will not drag their heavy bodies. The animals are not molested in the main stream, as the swift current and deep water afford them easy means of escape. If a practicable trap could be devised the alligators could be easily and profitably caught by hundreds on the sandy beaches as they crawl out to sleep or bask in the sun. Only green-salted skins are used by the tanners, as the stiff, sun-dried skins are worthless.

The alligator-skin business of the world is controlled by a firm in Newark, N. J., which buys 80 to 90 per cent of the American production. It is significant that the sudden supply of 30,000 alligator skins per year from Colombia found such a ready market in the United States that they have invariably been purchased upon arrival at New York, on presentation of the shipping documents, even before unloading the cargo.

Repeated efforts of Colombian shippers to attract European tanners have been fruitless. Trial consignments were sent to London, Belgium, France, Austria, and Germany, the resulting sales scarcely paying expenses. Nevertheless, European manufacturers of fine leather goods annually buy large quantities of alligator leather from American tanners. The process of tanning is easy and economical. A simple apparatus that rapidly works a 2-inch agate stone with a backward and forward motion is all that is necessary to polish these skins rapidly, giving them a beautiful gloss that no artificial japanning or varnishing can imitate.

The prices paid by tanners at New York range from \$0.20 for a 3-foot skin to \$1.50 for those 7 to 10 feet in length, no discrimination being made in hides over 7 feet long. Prices have risen as high as \$1.95 for the larger sizes, with no selection, and they have fallen as low as \$1.15 with a selection that causes 40 to 60 per cent of a consignment containing damaged skins to be sold for one-third to one-half of the specified price.

**Possible Utilization of By-Products.**

A large amount of valuable material is now thrown away in collecting the skins in Colombia. The skin scrapings can be used for making glue; the teeth, a perfectly white ivory of medium hardness, can be worked into an endless variety of small articles; the grease, which constitutes a large part of the animal's body, gives a fine, clear, light yellow oil, resembling cod-liver oil, and is widely used among the natives for pulmonary diseases. There are 2 to 4 musk glands in each animal, and the flesh and bones could be used for fertilizer, if the former could not be suitably prepared for human or animal food. If the yearly exports were increased to 50,000 or 100,000 skins, the exploitation of the by-products could be brought to a profitable level.

The exports of alligator skins to the United States from the ports of Barranquilla and Santa Marta, according to the invoices certified at the consulates, totaled \$11,272 in 1910 and \$61,324 in 1911. In 1909, the last year for which export statistics of the Colombian Government are available, the exports of alligator skins from that country totaled 54,525 pounds, valued at \$6,660, of which 54,430 pounds, valued at \$6,645, were shipped to the United States.

**ELECTRIC BATTERY VEHICLES IN ENGLAND.**

[From the London Times.]

The announcement of the opening of a commercial campaign in London by American makers of electric-battery vehicles has again drawn attention to the curious difference between the total neglect of this method of traction in the United Kingdom and the enthusiastic multiplication of such vehicles in America. In Chicago alone there are over 2,000, and their average daily mileage is said to be 31, as against "probably 15 miles" for a horse van. The common explanation that the petrol (gasoline) drive has been brought to a higher stage in Europe does not appear to be wholly satisfactory; for it is not denied that what is called the "gasoline truck" is faster and is indispensable for "long-haul business," and the claims of the electric vehicle are based on its simplicity and economy for town deliveries. In a paper read before a sectional meeting of the National Electric Light Association in Chicago, Mr. R. Macrae assumed that the average daily consumption of energy was 9 kilowatt-hours, at a price of 4 cents per kilowatt-hour, and in the discussion that followed one speaker calculated that if one-half of Chicago's roadway traction were transferred to the electric-battery system the central-station revenue from charging would amount to \$4,000,000 a year. Attractive as this business is to the public supply authorities, it is not to be expected that skepticism in that quarter will be quickly overcome. The figures quoted are not at all convincing. At a New York meeting the record of 100 delivery vans of 1,000 pounds capacity was examined, and it was stated that, excluding depreciation, interest, and wages, the best performance over a period was 25 miles per day at a total cost of \$19.57 for 30 days; while the worst was 28 miles daily for a total of \$64.21. It is to be hoped that carefully observed trials will soon be carried out on this side of the Atlantic.

**JAPANESE BEAN-OIL BARRELS.**

[From Consul George N. West, Kobe.]

The usual Japanese cask or container used for sake, provisions, etc., is quite different in shape from that used in America, the sides being straight and the top wider than the bottom. Exporters of soya-bean oil use the foreign-style barrel. There is a factory which makes these, 2 feet 8 inches high, 2 feet diameter in the middle, 1 foot 8 inches diameter at the ends, and holding 12 cubic feet. The barrels are made of Japanese oak with iron hoops and cost \$1.80 to \$1.85. A German firm imports its own barrels, while an English firm uses empty ammonia drums which are being returned to the United States. A list of Kobe soya-bean oil exporters may be secured from the Bureau of Manufactures.

**LOW TRAMWAY FARES IN ENGLAND.**

[From Consul Augustus E. Ingram, Bradford.]

In view of the profits made by the Bradford city tramways, amounting to £40,000 (\$194,660), during the year ended March 31, 1911, of which £20,000 (\$97,330) was applied in relief of city taxes, the general manager of the city tramways has issued a report (a copy of which will be loaned by the Bureau of Manufactures) dealing with the advisability of instituting halfpenny (1 cent) fares, workmen's tickets, transfers, etc.

The report contains an interesting summary of the experiences of various towns throughout the United Kingdom where halfpenny fares have been tried. In Glasgow, where this system of fares was first introduced in 1894, a recent three-months' experiment, in which a ride of 1 to 1½ miles was given for a halfpenny, led to an increase of 50,000,000 to 60,000,000 in the number of passengers carried per annum. In Glasgow, however, there are long, level runs, great density of population, and consequently lower working costs. In Bradford practically every car ascends a steep gradient almost immediately after leaving the center of the city, as a result of which the number of cars on the road at these points is strictly limited.

The policy in Bradford has been to encourage migration to the healthier outlying parts of the city by giving fairly long distances for a penny (2 cents) fare. The Bradford Tramway manager concludes that halfpenny fares can not pay. By the time the passenger "has been picked up, his fare collected, and the risks of accident, etc., taken into account, his halfpenny has vanished into thin air, and he is being carried at the expense of the penny passenger, who is the mainstay of the receipts of most tramway undertakings." The hope is expressed that a universal penny fare within the city may yet be reached.

**Prices of Tickets and Use of Transfers.**

In regard to issuing return tickets for workmen, the policy most favored is that of cheapening all fares and not "drawing impossible distinctions between class and class." The total fares paid by his family are of more importance to the workman than his personal fare. Moreover, cheapening fares at the rush hours is a questionable policy. Diagrams are given showing the number of passengers carried during each half hour of the day, and the experiences of the Hull tramways are cited.

The sale of quantities of tickets at reduced rates is not recommended. It is contrary to the principle of simplicity of fare collection essential to successful tramway operation. Celluloid tokens, which are convenient to carry and are accepted by conductors for fare, are issued at the office of the Bradford Tramways at face value.

A tabulated summary of replies to inquiries respecting the issuance of transfer tickets and passes in other towns of the United Kingdom, is given in the report, and the conclusion is reached that the use of transfers is "extremely undesirable and impossible to work without extensive fraud." It is pointed out that in several cities in the United States, where transfers are in use, "it has been necessary to pass a special statute to prohibit illegal trading in these transfers."

It is urged in conclusion that as there are many indications that the tramway vehicles will undergo considerable changes in the direc-

tion of increased comfort for the passengers and safer operation, especially in methods of braking on steep gradients, it is desirable that no change of policy shall be made tending to deplete the funds and profits of the railway.

### CANADIAN REFORESTATION MEASURES.

[From Consul Felix S. S. Johnson Kingston, Ontario.]

In 1911 the Ontario Legislature passed a reforestation act which empowered any county council, with the approval of the Minister of Agriculture, to pass by-laws for acquiring lands suitable for reforestation purposes, for planting trees on the lands so acquired, for protecting the resulting timber, for the management of both the land and the timber, and for raising money to an amount that will not increase the existing liability on this account at any one time to more than \$25,000. The intention of this legislation is to encourage the utilization of otherwise waste lands in a way that will at once make them a source of revenue and produce an ameliorating effect on the climate of the locality.

The county council of Hastings (in this consular district) has taken the necessary steps to bring the reforestation act into operation in that county. The Trent River from Rice Lake to the Bay of Quinte runs through Northumberland; above Rice Lake it traverses, under other names, the county of Peterboro and the provisional county of Haliburton. The main stream of the Trent, with its numerous affluents, runs through a rough country, most of it unfit for profitable farming but well suited for the growth of the Canadian pine which at one time flourished indigenously and abundantly there. The destruction of the forests by ax and fire has been in many places so complete that there are not enough trees left to seed the vacant places. Apart from the value of a second crop of white-pine timber, the process of reforestation will have the effect of regulating the available supply of freshet water so as to greatly improve the navigation of the Trent waterway, including not only the river itself but the lake expanses and its artificial channels.

### PORTUGUESE VEGETABLES FOR EXPORT.

[From Vice Consul General James L. A. Burrell, Lisbon.]

There is one crop of potatoes suitable for exportation which continues from February until the end of July. The onion crop begins in August and ends the latter part of December, while the bean crop (red, white, and black-eyed beans being raised and exported) lasts from August to the end of November. The potatoes exported from Lisbon are of good size, and they, as well as the onions, are apparently able to stand a tropical climate, as large quantities are sent every year to the hot sections of South America.

Potatoes now bring about \$1.45 per box of 30 kilos (kilo = 2.2046 pounds) f. o. b. Lisbon, but are sold at times as low as 60 cents for the same amount. The prices vary greatly according to season, size of crop, and demand. The price of onions to-day (April 25) per box of 50 kilos is \$2.60 f. o. b. Lisbon. The prices, however, fluctuate, as in the case of potatoes. Red beans cost about 9.5 cents per kilo.

Potatoes are packed in wooden boxes holding 30 kilos each, onions in similar boxes containing 50 kilos, and beans in bags of 100 kilos.

**COMMERCIAL NOTES FROM CHINA.**

[From Consul General Samuel S. Knabenshue, Tientsin.]

**Hats and Caps in North China.**

The cutting of queues has been most popular in the south; here in the north a very large majority of Chinese still adhere to them. The recent demand for hats and caps is not in consequence of queue cutting, but of the adoption of western garments by Chinese. Naturally the two go together, but there are vastly more natives in the south who are adopting European garb than there are in the north. Not long ago one of the foreign retail merchants filled a large show window with Scotch caps, with the result that there was a crowd of interested Chinese in front of the window all day. There is no doubt that there will be a growing demand for hats and caps, especially in those cities like Tientsin and Peking in which there is a foreign population.

There are at Tientsin eight foreign concessions—Japanese, French, British, Austrian, Italian, Russian, German, and Belgian. The largest of these are the French, British, and German, and practically all the retail foreign trade is in these three concessions. The total foreign population in the eight concessions is about 3,000 men, women, and children, of course not including the soldiers of various nationalities. Those Chinese who buy foreign goods like caps and hats patronize these dealers. [A list of Tientsin retail dealers in hats and caps is obtainable from the Bureau of Manufactures.]

**Quoting Prices to China Coast.**

In writing to local firms American exporters should give prices and discounts and if possible make the price c. i. f. Shanghai or Tientsin. To quote prices f. o. b. an inland American city is too indefinite, because merchants here can not be expected to know what the railway charges will be on the goods to Seattle, Vancouver, or San Francisco, if sent that way, or to New York, if sent by freight steamer through the Red Sea. As a rule all large shipments for the China coast from the United States east of the Rockies come by the latter route because the ocean freights are cheaper. For sending a small shipment to a retailer in Tientsin, I would suggest that there are houses in Chicago which have special rates for shipments to China. They do a large business of their own and will take small shipments from anyone, to be forwarded along with their own. I understand these shipments are gathered until a carload is ready, when it is forwarded to Seattle to take steamer.

I lay much stress on giving the price delivered on the China coast, because I have known of several cases where American firms lost orders by not attending to this point. It takes two to three months for a letter from Tientsin to reach an addressee in the United States and receive a reply, hence everything that is necessary to enable a merchant here to judge should be in the first letter. British and German merchants understand this thoroughly, while American firms do not give it careful attention.

**Amusement Devices at Tientsin.**

So far as I am able to find out, the pool and billiard tables in use in the settlements here are chiefly of English manufacture, there being a few French ones in the French concession. The various clubs

and hotels have tables, and there are two or three bowling alleys. The Chinese of the merchant class also take very kindly to billiards and pool, and there are in the concessions several Chinese establishments which have tables.

### GOVERNMENT FIRE INSURANCE IN GERMANY.

[From Consul Samuel H. Shank, Mannheim, Grand Duchy of Baden.]

Since 1758 there has been State fire insurance in the Grand Duchy of Baden. The law was changed at various times, but the one now in force was enacted substantially in its present form in 1852 and some slight modifications made in 1902. This law provides that each building erected must be insured with the State. The amount of insurance is the full value of the building. The value is entered at the tax office and premiums are paid to the tax collector. Private companies may insure only movable property.

The amount of damage by fire in the Grand Duchy of Baden from 1901 to 1910 was \$15,710,000. During 1910 there were 3,633 fires, of which 1,844 were in dwellings, 726 in rooms adjoining dwellings, and 694 in outbuildings. The origin of the fire was determinable in 2,376 cases. Intentional fires numbered 100; carelessness caused 256; children were the cause of 206; faulty construction occasioned 20; lighting was responsible for 519; sparks from locomotives, 17; factories caused 12; lightning, 331; explosions, 230; and spontaneous combustion was the origin of 83.

There were 2,923 buildings totally or partly destroyed. Of these, 1,057 were dwellings, 1,002 barns, 530 used for both dwellings and stable purposes, 58 public buildings, 257 industrial buildings. The number of fires in which only movables were damaged was 2,163.

#### Fire Losses and Casualties.

The total amount of damage was \$2,524,035, of which \$1,110,327 was on buildings, \$1,338,443 on movables, and the remainder was attributable to loss from damage by water. The amount of insurance paid was \$1,110,306 on buildings and \$1,118,168 on movables.

Of the total damage to personal property, 0.7 per cent was on live stock, 9.8 per cent on agricultural products, 1.3 per cent on fuel, 2.9 per cent on raw materials for manufacturing, 22.9 per cent on manufactured and partly manufactured goods, 14.7 per cent on furniture, clothing, and household effects, 47.7 per cent on machinery, tools, vehicles, etc.

The greatest number of fires occurred in January and December, over 400 each month. In 42 fires there were 19 occupants killed and 37 injured. There were 6 firemen injured, but none killed.

During 1910 in the city of Mannheim, with a population of 200,000, there were 565 fires, with a total loss of \$683,114, of which \$662,041 represented loss through a fire in a large machinery factory.

### Russian Military Aviation.

A Reuter dispatch from St. Petersburg states that the Russian Council of War has decided to purchase 150 monoplanes built on the Nieuport system. Ten of the machines will be ordered abroad and 140 in Russia.

**STATUS OF FOREIGNERS IN GERMANY.**

[From Consul General A. M. Thackara, Berlin.]

Americans seek information relative to the position of foreigners in Germany. There would appear to be no limit to the time a foreigner may remain in Germany, as long as he conducts himself properly and in accordance with the German laws.

The tax laws vary in the different Federal States. A foreigner residing in Berlin becomes subject to a municipal tax on his income after three months and to an additional State (Prussian) tax after one year. In the case of Berlin, the two taxes are of equal amount. The State tax, on the basis of which the municipal tax is calculated, is itself based on the total amount of income of all kinds which the person to be taxed affirms that he receives. It is usual for the tax authorities to check the accuracy of the income statement made by the person to be taxed by comparing it with the income which is considered commensurate with the style of living which the individual in question maintains.

The municipal and State taxes are always based on the same sum. On an annual income of \$5,000 the two combined would be about \$300 at the existing rate of taxation.

There would appear to be no hindrance to a foreigner acquiring real estate. The rate of taxation on property of this kind in Berlin varies from year to year. In 1908 it was 3.15 marks (\$0.75) per 1,000 marks (\$238) of the appraised value of the property and in 1909 3.04 marks (\$0.7235). A sojourner in Berlin is normally subject only to the income tax. If he engages in business, however, special business taxes become applicable. Local conditions elsewhere in Germany, of course, vary.

**Duties and Taxes on Automobiles.**

The import duty on automobiles is based on weight, the rate of duty being 40 marks (\$4.52) per 100 kilos (220.4 pounds) net weight, for vehicles weighing  $\frac{1}{2}$  to  $\frac{1}{2}$  metric ton (2,204 pounds); 25 marks (\$5.95) per 100 kilos for vehicles weighing  $\frac{1}{2}$  to 1 metric ton; and 15 marks (\$3.57) for vehicles weighing more than 1 metric ton. These rates also apply to second-hand automobiles. All automobiles imported for touring purposes for not over 90 days may be entered duty free, but they are subject to an imperial tax, depending on the length of stay in Germany, as follows: For a stay of one day, 3 marks (\$0.71); 2 to 5 days in a year, 8 marks (\$1.90); 6 to 15 days, 15 marks (\$3.57); 16 to 30 days, 25 marks (\$5.95); 30 to 60 days, 40 marks (\$9.52); and 61 to 90 days, 50 marks (\$11.90).

The days need not be consecutive. Those are deducted while the vehicle is in a German garage or a repair shop for repair or improvement, as well as the days during which the automobile may have been taken across the German border, providing the card of admission or tax card is stamped by the custom official at the border, both going out and returning to Germany. For further information in this respect, reference is made to an article on international automobile regulations in Daily Consular and Trade Reports for May 16, 1911.

**COTTON SHIPMENTS FROM KIAOCHOW.**

[From Vice Consul Henry W. Happell, Tsingtau.]

Local merchants are making valiant efforts to increase the export of native cotton, especially that raised in Shantung and south Chihli, through Tsingtau, and the report of the Shantung Railway shows that the enterprise has met with encouraging success. During the past year 543 hundredweight of the raw material were carried, while for the first quarter of 1912, 125 hundredweight were shipped via Tsingtau.

The attention of the cotton trade was first directed to China as a possible source of supply of that commodity in 1908, when prices in the American markets rose high. At first the cost of the raw material as well as the quality of the Chinese article proved an impediment to a successful export trade; but since 1909 the quality has improved and cotton dealers abroad are showing a decided interest in the large crops, owing to the superiority of the fiber, it being of a clear white color and silky touch. This is attributed to the careful tending of the young plants. The cotton is raised from local seed, as all efforts to raise plants with American seed have proved futile.

The railway traversing the cotton region has naturally been an essential factor in the rivalry for the transportation of that commodity, and the Tientsin-Pukow Railway, in connection with the Shantung Railway, has practically eliminated the carrying trade via the Grand Canal. Until recently this new trade of Tsingtau had not been felt by the other ports of North China, owing to its undeveloped cotton-gin industry, but now several cotton presses have been erected, and the finished bales can be put aboard vessels lying at the wharf for direct shipment abroad.

---

**DIAMOND OUTPUT OF GERMAN SOUTHWEST AFRICA.**

[From Consul W. J. Yerby, Sierra Leone, West Africa.]

The African World says, in a recent issue:

The production of diamonds in German Southwest Africa, according to the report of the German Diamond Regie, amounted in the year 1911-12 to 816,296 carats, which were sold by the company; the quantity was 798,865 carats in the preceding financial year. The average price realized was 25.602 marks (1 mark=23.8 cents) per carat, as against 26.775 marks in 1910-11, the reduction being chiefly attributed to the further decline in the size of the stones, of which 6½ formed 1 carat, as contrasted with 5½ stones per carat in the previous year.

Of the total production, 94.55 per cent was forwarded to Antwerp, 4.79 per cent to Germany, and the balance, 0.66 per cent, to London. A large portion of the diamonds forwarded to Germany was, however, sent abroad in an uncut condition, so that the German consumption scarcely amounted to 3 per cent. The total production was raised by 14 Southwest African companies, of which 5 were responsible for 96.32 per cent of the total. The net profits realized by the Regie amounted to \$203,420, and it is proposed to pay a dividend of 10 per cent, being the same rate as in 1910-11.

The output of the United Diamond Mines at Luderitzbucht amounted to 2,480 carats in March, against 2,075 carats in February.

The Financial News, of London, states:

It is officially announced that, owing to a new agreement between the Government and the Antwerp syndicate, German Southwest African diamonds will be sold at higher prices than hitherto.

[A previous report from Consul Yerby on the diamond fields of German Southwest Africa was published on Apr. 27, 1912.]

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 9044. Stocking-knitting machines.**—An American consul in a Mediterranean country reports that a business man in his district requests to be placed in communication with American makers of stocking-knitting machinery. Correspondence should be in Italian, and prices should be quoted c. i. f. city of destination, if possible.
- No. 9045. Rosin, pimento, tallow, etc.**—A Russian firm, established in a large city for 12 years as agents representing various English concerns in the sale of colonial produce and various raw materials used by soap and color manufacturers, informs an American consulate that it desires to form connections with first-class American firms handling various articles, such as rosin, pimento, tallow, etc. References will be furnished, and correspondence may be in English.
- No. 9046. Shoes.**—A report from an American consul in Africa states that a trader in his district desires catalogues and price lists from American manufacturers of "one-price shoes."
- No. 9047. Sugar machinery.**—A company has been organized in a Latin-American country with a capital stock of \$500,000, one-third of which has been paid in, to erect a sugar refinery. The company proposes to put up a plant to produce 150 tons daily and expects to purchase about \$193,000 worth of machinery. American manufacturers of this class of machinery should communicate with the promoters in charge of such purchases, whose names are furnished by the American consul who forwarded the report.
- No. 9048. Fruits and southern products.**—An American consular officer in South America reports that a business firm in his district wishes to handle consignments of fruits from the Southern States, the Mississippi Valley, and Western States. The firm also desires to handle such products as naval stores, lumber, rice, cotton, sugar, tobacco, especially tobacco for cigarettes, etc. Correspondence may be in English.
- No. 9049. Wire-drawing powder.**—A report from an American consular officer states that a steel mill in a European country is in the market for American wire-drawing powder. Correspondence may be carried on direct with the factory and can be conducted in English.
- No. 9050. Moving-picture films and vaudeville.**—The proprietor of a new theater in a foreign country (a modern vaudeville and picture house just completed with American fittings throughout) desires to be placed in communication with persons in the United States controlling film rights and also persons capable of contracting for vaudeville performers of recognized ability. The American consul who forwarded this report writes that several theaters under one management with others acting under agreements form a circuit of considerable and constantly increasing importance in the country in question. Only films of the better class or artists with established reputations are desired. References will be given and required.
- No. 9051. Marine paints.**—An American consul reports that a business man in a Mediterranean country desires to be placed in communication with American manufacturers of marine paint. Correspondence may be in English and prices should be quoted c. i. f. city of destination.
- No. 9052. Buckles.**—An American consular officer in the United Kingdom has forwarded a sample buckle which was made in the United States, and adds that a business firm in his district is desirous of securing the name of the manufacturer of these buckles.
- No. 9053. Treatment for malaria.**—An American consul reports that the local government in a foreign country has recently considered new ways of extending the use of quinine, owing to the prevalence of malaria. A system of treatment has now been decided upon, and recently the first order for half a ton of quinine hydrochloride pellets was filled by a British firm. It would seem that large orders such as this would afford an opportunity for American pharmaceutical houses. Copy of the complete report can be obtained from the Bureau of Manufactures.

## COMMERCE OF BOHEMIA.

### CARLSBAD.

[By Consul Will L. Lowrie.]

Commercial interests of the Carlsbad consular district in 1911 were normal in every respect and showed little variation from those of 1910. The western part of Bohemia is a storehouse of natural wealth, and its manufacturing interests have developed until it is one of the most important industrial centers of Europe. The comparatively mild weather of the autumn and winter months was favorable for building operations, which engaged a large number of men. This is an important factor in the district, for the mineral spring resorts, Carlsbad, Marienbad, Franzensbad, and Teplitz, permit this class of work only between October 1 and May 1.

### Effects of the Drought—Markets for American Goods.

The failure of crops in Bohemia as the result of long-continued and severe drought had its effect on the manufacturing industry of this district. Food prices advanced rapidly, and workmen were in a serious plight. The hardship was met in a measure by factory owners through the importation of large quantities of potatoes, fish, and other foods, which were sold to the employees at cost. In a few instances wages were increased to meet the unusually high cost of living. The lack of water affected the pulp mills, which sold all of their old stock at high prices, but were not able to manufacture new supplies. Paper mills also suffered and, in fact, all the extensive industries dependent upon water power were more or less seriously affected.

A fairly good market has been established for American products, and the demand is growing steadily. Probably 50 per cent of the principal stores in this consular district carry in their stocks some article of United States origin. American machinery is held in high esteem and one of the glass factories recently installed a glass-blowing apparatus, which has been so satisfactory that other concerns will

place orders. Cash registers, typewriters, and many other articles were in good demand. Several new lines of American products entered the local market during the year, and have been well received by the public. An agent at Eger made a serious effort to sell leather to shoe factories throughout Bohemia, but was met with the objection by the manufacturers that the American exporters would not cut the skins to meet their wishes and shipped leather of a grade inferior to sample. Unless more careful consideration is given to these matters, the trade may be lost entirely to Germany.

#### **China and Earthenware Trade.**

The year may be regarded as favorable for the china industry. Although the trade is still suffering from the overproduction of previous years, the various china factories have every reason to be satisfied with their sales, both domestic and foreign, especially the former, which have increased to a remarkable extent. Only the cheaper grades of china have profited by present conditions, as the market for fine china sets and fancy articles is still far below normal. China manufacturers universally complain about the falling tendency of prices, which, in spite of all their efforts, could not be prevented in the domestic market. In the export trade, where the Austrian manufacturers have to compete not only with each other but also with the German manufacturers, the tendency was also toward lower prices.

Methods of production have not changed. Wages remained about the same as in 1910, despite the strong efforts of the working class to force a raise. There were no particular periods of inactivity among the laborers. There was little change in the price of raw material, owing largely to the Austrian kaolin cartel. The freight on raw materials was increased on various railroads. The drought caused such an increase in the cost of transportation to the port of shipment as to make an appreciable difference in the profit on the export trade to America.

The growing preference for white or slightly decorated china evidenced in the previous year was noticeable. In spite of the strong demand and the general rise in the price of all commodities, it was impossible to bring about a rise in the prices of chinaware, as a lack of cooperation among the Austrian manufacturers prevented concerted action toward any radical change.

There was little difference in the range of the earthenware industry in 1911 and 1910. In both years the Leipzig fairs, which play a large rôle in the business, did not accomplish what was expected of them. The trade with the United States was also far from satisfactory to the manufacturers. The increase in the cost of raw materials continued in 1911, while the wages showed a rising tendency.

#### **Unfavorable Conditions in the Glassware Trade.**

The condition of the Austrian chemical and industrial glassware industry continues unfavorable and no signs of improvement are visible, according to the reports from the manufacturers. Prices of raw materials and wages are continually increasing, while the prices of the manufactured product, owing to foreign competition, have gone down rather than up. Conditions were such that various factories were compelled to shut down during the year.

As a result of the increased cost of living workmen demanded higher wages, which were not granted, and strikes and lockouts

resulted. Conditions will probably be worse in 1912, it being expected that there will be several well-organized general strikes in the glass industry.

Business with the United States was somewhat better in 1911 than in the previous year. In one factory, which makes a specialty of chemical glassware, this business amounted to approximately \$12,000 in 1911. Strong competition has been met in the foreign field, resulting in decreases of 15 to 20 per cent in prices in the past four years. Yet the price of raw materials has increased. For instance, potash soda now costs 5 to 12 per cent more than in 1908. Wages are much higher than they were several years ago. As an example, youths engaged as glass-oven helpers, who earned \$3.25 a week in 1909, now receive \$4.67, as there is a scarcity of such laborers.

In view of the fact that glass factories apparently can not make money except by large-scale production, the factory mentioned above will be enlarged by several additions and by the installation of a newly invented gas oven, as well as new machinery, which will require an outlay of over \$20,000.

The demand for fine engraved and cut glass, for which Bohemia is famous, was active throughout the year, and factories experienced difficulty in keeping up with their orders. A new style of etched glass was placed on the market and met with good demand. Its manufacture requires skilled operatives and the output was limited. The cost of raw material increased considerably, but wages showed little alteration compared with 1910. The greatest demand for artistic glassware comes from the United States, Germany, Russia, southern Europe, and Egypt.

#### **Manufacture of Musical Instruments.**

The last year was not particularly good for the musical-instrument industry. In various articles there was a slump of business, which was especially noticeable in the export trade of the Graslitz manufacturers. It was adversely affected by uncertain political conditions everywhere, resulting in a spasmodic rather than a uniform business.

The most important branch of the Graslitz musical instrument industry is the making of brass and wood wind instruments. The Graslitz product is always entering new territory, and in 1911 the instruments were sold on hitherto unexploited ground. The technical equipment has been noticeably improved and the productive power has been increased proportionately. The business in Europe was favorable and much more active than in the previous year, but the total export decreased. Buyers in the United States were reluctant about placing stock orders. There was a strong demand from Germany, Russia, and Austria-Hungary, but business with the Balkan States, owing to the outbreak of the Turko-Italian War, suffered a heavy setback. The price of raw material, resulting from keen competition between the dealers in such articles, was somewhat reduced. Wages and salaries had to be increased appreciably.

The business in stringed instruments was good. There were plenty of large orders to keep the manufacturers busy at all times. Prices of raw materials continued to increase and wages were advanced. Despite the great activity in the business, prices were

much reduced, so that the profits were lessened. Stringed instruments are manufactured largely by home industry, the small manufacturers selling their wares to jobbers and exporters, or to cooperative societies. The center of this industry is Schonbach, but Graslitz is now producing many instruments of this class, having done a particularly good business last year in fine-quality instruments. Gut strings are produced in large quantities, and business in this line was excellent, although the selling price was not adjusted to the cost of manufacture as there is much competition.

A branch of the industry that has made a phenomenal growth is the manufacture of machines for the making of stringed instruments—cellos, violins, guitars, mandolins, zithers, banjos, etc.—in which a big business is done with Russia, North and South America, and Italy.

#### **Laces and Embroidery—Clocks—New Paper Fabric.**

There have been no changes in wages at the lace and embroidery factories, although the increasing cost of living will make this necessary in all branches of industry. Raw materials were somewhat cheaper, but it is expected that artificial silk will increase in price shortly, owing to the formation of a trust.

America manufactures much artificial embroidery, and about all that the importers desire to buy from this district consists of novelties in fine cotton embroidery.

The export of clocks to America was somewhat better in the first half of 1911 than in the corresponding period of 1910, but the business declined noticeably in the last half of 1911. The rise in the prices of various raw materials, as well as the perceptible increase in wages, have contributed greatly to the unsatisfactory state of the export business.

A factory was built during the year at Fleissen for the manufacture of "textilose," a new substitute for jute. It is claimed that bags made of "textilose" are cleaner than those made of jute and as durable. The principal material is a special sort of paper spun into fine threads. It is uncertain how the industry will develop, but well-known capitalists of Austria and Germany have financed the enterprise.

#### **Small Hop Crop.**

The 1911 hop crop of this region was retarded by attacks of the aphid fly in the spring, followed by the abnormally dry summer, resulting in a reduced crop return. The umbels were smaller than in previous years, but of finer and heavier quality. The Saaz district produced 9,920,700 pounds, a little over half the normal crop. The 1910 crop amounted to 18,739,100 pounds. There were 27,821 acres under hop cultivation in 1911, against 27,248 acres in 1910, so that the average production in 1911 was 357 pounds per acre, and 688 pounds per acre in 1910. The other hop districts of Austria produced about 6,613,800 pounds of hops on 21,041 acres in 1911, against 12,676,450 pounds on 22,264 acres in 1910.

Germany produced 23,478,990 pounds of hops in 1911, on 65,873 acres, compared with 44,973,840 pounds from 67,870 acres in 1910. The statistics of the world harvest for 1911 are not yet available, but it is approximated at 132,276,000 pounds, produced on 234,700 acres, while the average annual harvest for the past 10 years has been 187,391,000 pounds. The shortage is partly made up from the un-

consumed product of former years, but the general consumption has greatly diminished as a result of the small crop.

The price of the 1910 hops rose as soon as the unfavorable harvest became evident. Saaz hops, which brought an average of \$26.39 per 110 pounds from September to December, 1910, sold for \$30.45 per 110 pounds in January, 1911, \$34.51 in March, \$36.54 in June, and reached \$40.60 by the end of July, 1911. The last 1910 hops were sold August 6 and 8, at \$54.81 and \$58.87 per 110 pounds.

#### **High Prices of the 1911 Crop.**

Before the first-picked hops were dry, August 8 to 10, 1911, they were in strong demand and brought \$60.90 and \$64.96 per 110 pounds. When knowledge of the short harvest in all the other districts became public, a sudden rise of prices began on August 11, the prices on that day rising to \$81.20 per 110 pounds. They rose to a maximum of \$93.38 to \$101.50 on August 16, and on September 1 stood at \$88.30 to \$93.38. On December 30 the prices were \$85.26 to \$91.35 per 110 pounds.

As the producers had not expected to obtain such high prices, they were in a great hurry to sell their product, and since the domestic and foreign brewers, as well as the dealers, were anxious to lay in their supply, about 70 per cent of the total 1911 production of Saaz hops was sold by the beginning of September. In spite of the relatively small crop, the hop producers had a remarkably good year, owing to the high prices, and many growers were in a position to improve their financial standing.

By far the greater part of the 1911 hops was sold to domestic consumers. The exports for September and October, 1911, totaled only 3,061,528 pounds, as compared with 8,252,920 pounds in 1910. This is explained by the high prices, for the foreign dealers preferred to content themselves with the purchase of old hops and those of cheaper quality. At the end of 1911 there remained approximately 661,380 pounds of the last crop of hops in Saaz, so that the market conditions are firm. As it may be assumed that all of the old hops will be used up by the beginning of the next harvest, there is reason to believe that, even with a good crop, the prices for next season will be high.

#### **Increased Consumption of Beer.**

Although the sale of beer in the winter and spring of 1911 was about the same as in the corresponding period of 1910, it increased about 25 per cent in the summer months, owing to the great heat, resulting in an increase in the total production of beer in this district. The output in the last three months of 1911 was the same as in the corresponding period of 1910. There is a general complaint among the innkeepers that, owing to the increase in the cost of living, people are drinking less beer than in former years. As a matter of fact, in spite of the higher hop and barley prices, more beer was consumed in this district in 1911 than in 1910.

The price of barley was higher in 1911 than it had been for a great many years, largely owing to the fact that, in view of the high price of feed, much barley was shredded and hence was not available for the brewing industry. The price of barley rose from \$1.84 to \$2.21 per 100 pounds, and hop prices were higher than at any time since 1882. As a result the cost of production of beer was from \$2.27 to

\$3.03 more per 100 gallons than in 1910, and many breweries were actually operated at a loss.

The cost of labor remained about the same as in 1910, but there is considerable agitation among the workingmen for higher wages. Owing to the increase in freight charges, the price of coal has gone up about 20.3 cents per metric ton (metric ton=2,204.6 pounds). The price of keg wood has also increased to an appreciable extent. Owing to a good ice crop, most breweries that generally have to make artificial ice in summer were able to get along with their supply of natural ice.

#### Mineral Production.

There are three centers of the soft-coal mining industry in this region—at Brux, Komotau, and Falkenau—and the mines were operated with full forces during 1911. In the Brux district, 19,819 miners produced 13,000,000 tons during 1911, valued at \$12,466,000, of which 73 per cent was used in Austria and the remainder was exported. Each miner produced about 652 tons, valued at \$629. In the Komotau district, 2,226 miners produced 1,600,000 tons, valued at \$1,481,900. In the Falkenau district 5,016 workmen mined 2,780,000 tons, valued at \$2,505,000. The production of hard coal was about the same as in 1910.

A new wolfram mine was opened at Schonfeld in this consular district and the ore is said to be of a satisfactory grade. There was no export of the mineral during the year.

The discovery of radium has proved to be valuable to western Bohemia and especially to Joachimsthal, at the foot of the Keilberg, the highest mountain of the Erzgebirge. After long negotiations, the Austrian Government has secured a monopoly of the pitchblende mines and plans to produce 5 grams of radium a year. It has also opened an elaborate bathing establishment at Joachimsthal, where water charged with the radium emanations is used with good results in certain diseases. Vienna capitalists have erected a large kurhaus, and the village promises to be a rival of Bad Gastein.

#### Exports to the United States.

The following is a classified list of the declared exports to the United States from the Carlsbad consular district for the years 1910 and 1911:

Articles.	1910	1911	Articles.	1910	1911
Art objects.....	\$5,859	\$5,207	Laces.....	\$4,354	\$1,289
Bead fringes.....	12,549	8,194	Linen goods.....	14,065	25,129
Beer.....	16,509	14,649	Lupuline.....	3,666	1,753
Chinaware.....	846,121	730,156	Medical glassware.....	10,604	15,111
Clocks.....	4,249	8,847	Mineral salts.....	30,525	41,663
Cotton tinsel thread.....	3,114	7,978	Mineral water.....	18,637	17,377
Dress goods.....	3,646	155	Musical instruments.....	146,420	158,553
Dresses.....	5,183	6,483	Sundries.....	7,298	5,226
Earthenware.....	50,001	45,634	Toys.....	53,024	53,937
Embroideries.....	9,805	23,681	Trimnings.....	19,712	.....
Furs.....	799	21,228	Woolen goods.....	1,210	7,233
Glassware.....	45,540	46,441	All other articles.....	10,452	5,214
Gloves.....	4,556	13,751			
Hops.....	358,616	342,300	Total.....	1,701,289	1,008,747
Human hair.....	6,024	.....			

The exports to Porto Rico and the Philippines totaled \$2,879 in 1910 and \$1,436 in 1911, and consisted of mineral water, chinaware, and glassware.

**Mineral Water, Tourists, Etc.**

The greatest source of income of the district is derived from the mineral springs at Carlsbad, Marienbad, Franzensbad, Teplitz, Giesshübl-Sauerbrunn, Neudorf, and Bilin. Mineral water and salts valued at \$58,969 were exported to the United States from these cities in 1911, as compared with \$49,162 during 1910. The four great spas of the district were visited by over 100,000 people from all parts of the world who came to take the cure and by 250,000 tourists. About 4,000 of the former and 3,000 of the latter were Americans. The number of annual visitors is increasing rapidly and they bring with them a vast income for the residents of the district.

---

**PRAGUE.**

[By Consul Joseph I. Brittain.]

The excessively dry weather in Bohemia during 1911 did much damage to all agricultural products and increased the cost of living. Sugar, milk, butter, and all vegetables advanced greatly in price, and many farmers were obliged to dispose of live stock on account of the short supply of feed and pasturage.

There has been a gradual advance in the cost of living in Prague during the past few years. Increased taxes and a general expansion of business have caused sharp advances in rents, ranging from 20 to 100 per cent. Dwellings in the business section rent for \$121 to \$203 a year per room above the first floor, and business rooms are much higher. Apartments are generally rented subject to three months' notice by renter or landlord, and time leases are made in some cases. Owing to the high taxes and other expenses some of the best buildings in the city net their owners less than 3 per cent income. Landlords are required to pay in taxes nearly 50 per cent of the rent received from tenants, besides income and various other taxes. New buildings are exempt from a portion of the tax for a number of years.

**Prague a Banking Center—General Progress in that City.**

Prague is one of the leading banking centers of Europe. Many of the most valuable properties on the two leading streets are occupied by banks, and some fine new buildings are being erected. Besides their regular banking business, these banks have commercial departments which manage many of the leading industries, such as sugar and alcohol refineries, automobile works, furniture factories, etc. The leading banks pay 4½ per cent interest on running accounts, 4 per cent on savings book accounts, and 4½ to 5 per cent on time deposits.

The electric railway lines of Prague were extended to several of the suburbs during 1911, and about 9 miles of extensions will be built during 1912. On January 1, the fares for short distances were increased 17 per cent and the long-distance fares 10 per cent. The reduced rate monthly books were withdrawn. The wages of the employees were not advanced and this may cause a strike. During 1911, 54,825,203 passengers were carried on the Prague lines, 9,315,203 more than in 1910. The receipts for the year were \$1,561,831, an increase of \$172,093 over the preceding year. The lines are owned by the municipality.

The new water plant, which has been under construction for four years, will probably be completed during 1912, and the new sewer

plant is nearing completion. Two new bridges are being built, one of concrete. The improvements on the Moldau River are to be finished in 1914, when navigation between Prague and Hamburg will be opened.

There has recently been organized in Prague a society for the study of English, with over 200 members. They will have a large reading room, where the leading magazines, newspapers, and trade journals will be kept. The trade papers received at this consulate, about 40 in number, are passed on after a few days to the various public reading rooms, for the benefit of the English-reading commercial public, and some will be sent to the library of the new society.

#### **Methods for Promoting American Goods.**

An official of the largest manufacturing company here, which uses American tool machinery, says that since 1892 the greater part of such machinery has been purchased in the United States, but unless our manufacturers and their agents increase their efforts, the tide will turn in favor of German machines, not because of any fault in the American product, but because German factories are near by and their agents are persistent.

Bohemian manufacturers make greater efforts to sell their products in the United States than do the American dealers to sell their goods in Bohemia. At the exhibition of brewers' products in Chicago in 1911, one of the Prague hop exporters had a representative and a model of his hop warehouse and drying plant, at a cost of at least \$1,000. Another exporter says that he spends a large amount for samples sent to prospective American customers, while a third has invested over \$10,000 in office furniture and rent for the display of his products. On the other hand, there are many instances of the reluctance of American manufacturers to supply samples for the development of trade. In one instance, a sample was requested from an American firm of an article which it was thought might sell here. After two months' delay, the sample arrived, accompanied by a letter asking for payment of the wholesale cost, 75 cents, and the parcel postage, although it could have been sent as a sample more cheaply by open mail.

Many American exporters have succeeded here, often against heavy odds. Among these are manufacturers of cash registers, computing machines, typewriters, machine tools, vacuum cleaners, sewing machines, agricultural machinery and repair parts, canned and evaporated fruits, box-making machinery, hard-coal stoves, razor strops, safety razors, shaving soaps, shoes, shoe leather, shoemaking machinery, fountain pens, electric vibrators, clothes wringers, moving-picture films, picture-frame moldings, shoulder braces, raw cotton, and numerous small articles.

There is no free baggage allowance on the railways of Austria, but traveling salesmen may obtain from the mayor or other highest authority in any community a certificate of identification and a permit. These, with a certificate issued by the chamber of commerce of the district, entitle the salesman to 50 per cent reduction on the freight rate on his samples. Annual, quarterly, or monthly tickets, which permit as many trips as desired, may be obtained at greatly reduced rates.

The absence of Americans in business in Bohemia handicaps American trade. There are over 1,000 German citizens residing in Prague,

many of whom are engaged in business. Few Americans live here, and the majority of these are naturalized citizens who have not been in the United States in years and are out of touch with the country.

About a year ago this consulate adopted the policy of furnishing information as to the possible market, style of goods on sale here, etc., to Americans who inquired for the names of dealers in various lines. This additional information has been much appreciated by exporters, and the commercial correspondence of this consulate increased over 50 per cent in 1911.

#### **Sugar Mills—Breweries—Crop Returns.**

There were 108 sugar mills in operation in Bohemia during the 1911-12 season, and 196 in all of Austria-Hungary, against 116 in Bohemia and 203 in the entire country in 1910-11. The beet crop of Austria-Hungary in 1911 was 7,856,500 tons, of which Bohemia furnished 2,157,600 tons, against 10,252,500 tons for the entire country and 4,532,400 tons for Bohemia in 1910. Of 1,154,300 tons of sugar produced in Austria-Hungary in the 1911-12 season, Bohemia produced 521,600 tons. The corresponding figures for 1910-11 were 1,522,785 tons and 716,682 tons, respectively. The price of sugar, exclusive of the excise duty, ranged from \$4.02 to \$8.73 per 220 pounds. The highest price for refined sugar was \$20.35 wholesale and \$21.11 retail, per 220 pounds.

There were 561 breweries, producing 1,088,380,400 quarts of beer, in operation in Bohemia in 1911, against 571, producing 1,035,546,400 quarts, in 1910. In the 1911 production there were consumed 177,000 tons of malt, 3,431 tons of hops, and, for heating and steam, 400,000 tons of coal. The average price of barley was \$3.97 per 220 pounds, and hops averaged \$30.45 per 110 pounds during the first half of the year, and \$88.30 during the latter part. The consumption tax on the production of beer in 1911 amounted to \$7,714,000 and the city tax to about \$4,060,000.

In consequence of the high production cost, the price of beer was raised 39 to 58 cents per 100 quarts. A contemplated advance of the beer consumption tax from \$0.66 to \$1.54 per 100 quarts would cause another rise, and is consequently being met with strong protests, especially from the laboring people, who receive very low wages.

The potato crop of Bohemia in 1911 was 1,700,000 tons, while the average annual crop for the three preceding years was 3,000,000 tons. The hay crop decreased from 1,700,000 tons in 1910 to 1,200,000 tons in 1911. There was also a shortage of about 500,000 tons in the crop of fodder clover. The four leading grains, wheat, barley, rye, and oats, showed a shortage of 200,000 tons below a normal crop. Practically no corn is grown in Bohemia, as the warm season is short and the nights are too cool.

#### **Sales of Agricultural Machinery, Gasoline Engines, and Automobiles.**

Crop failures and the increased activity of the Bohemian manufacturers made the sales of American agricultural machinery in Bohemia smaller in 1911 than in previous years. There are several factories in Bohemia making agricultural machinery and many of the reapers and mowers are pure imitations of American machines. Factories are also making full lines of repair parts for American machines, depriving the American makers of considerable profitable

business. The local manufacturers resort to all kinds of price cutting. More interest is taken in gasoline traction engines and there is an increased demand for gasoline engines for feed cutters, thrashing machines, sawmills, etc. American manufacturers of agricultural machinery should have more exhibits at the Prague agricultural fairs.

The sale of automobiles is gradually increasing, but the market is limited, on account of the inability of the people to purchase cars. With 600,000 population, this city has less than 700 cars. The cars of local make are not considered equal to those from France, Belgium, Germany, Italy, or the United States. American cars are much admired and one agent recently contracted for 40 of them, but the American manufacturers have not exhibited here as yet. A poorly constructed, cheap car is not in demand. There are not many motor trucks in use here.

#### **Depressed Cotton Industry—River Traffic.**

The cotton industry was much depressed during 1911, and the spinning mills were obliged to reduce their output 20 per cent. The weaving and the cotton-printing businesses were also dull, with prices low. The exports were about the same as in 1910. The imports were small, especially of cotton yarns. There were numerous business failures. Stocks were low at the weaving mills at the close of 1911, but the outlook for 1912 was much brighter. As a result of the dull business of the past few years, the organization of cotton printers has purchased and closed several printing establishments.

The water in the Elbe River was said to have been lower during the summer of 1911 than at any time in the preceding 50 years, and traffic was suspended from July until October. The total traffic decreased from 2,200,000 tons in 1910 to less than 1,500,000 tons in 1911, the greatest decrease being in the shipments of brown coal, sugar, petroleum, malt, and barley. Boats were able to run from Prague to the confluence of the Moldau and the Elbe, owing to the new dams and locks. When the waterway to Hamburg is completed, in 1914, boats will be enabled to go from Prague into Germany even in dry weather. Water rates from Hamburg are much lower than railway rates.

#### **Fruit Imports—Slaughterhouses.**

Fruit imports were larger than usual in 1911 as a result of the partial failure of the Bohemian fruit crop. Several cars of fresh apples were imported from Canada and some from the United States. These sold at 5.9 to 11 cents a pound. Common apples from Australia, packed in barrels, sold at 9.2 cents per pound. Peaches from South Africa brought 16 to 20 cents each. Domestic apples of fine quality, known as Calville apples, are packed in cotton and retail as high as 30 cents each.

There is a market here for carefully packed American fruit of the finer grades. The sale of evaporated fruit from the United States is increasing. One dealer last year sold over 30 carloads of California fruit. On account of the high duty on canned fruit—7.83 cents per pound—only a limited quantity is sold. The local canned fruit is inferior to the American product.

At the Prague municipal slaughterhouse 40,217 head of cattle, 5,908 calves, 26,829 sheep, 492,938 hogs, and 3,480 horses were slaughtered during 1911, the total of 569,372 being an increase of

108,352 over that for 1910. The largest number of cattle were slaughtered in May, and the largest number of hogs in November. The largest number of cattle killed in one day was 388. The average price paid for cattle on the hoof, per 220 pounds, was \$18.76 for domestic animals and \$17.89 for cattle from Galicia and other parts of Austria. The average price of meat per 220 pounds was: Mutton, \$62.92; veal, \$33.02; domestic pork, \$28.15; Galician pork, \$31.91; Servian pork, \$34.50; lamb, \$26.85; beef, \$26.75 and \$29.35. Kids sold at \$1.11 each. The slaughterhouses are owned and operated by the city and are clean and well conducted.

Besides the animals slaughtered here meat carcasses were shipped in as follows: 3,829 sheep, 34,105 calves, 1,830 hogs, 4,098 lambs, 5,045 kids, and 4,905,212 pounds of beef and pork.

#### Exports to the United States.

The exports to the United States direct from Prague were \$151,150 less in 1911 than in 1910. The heaviest decreases were shown by beans, ladies' lambskin gloves, and human hair and hair goods. The shipment of human hair into Austria was prohibited for a time on account of the plague in China. Much of this hair is treated and reshipped to the United States. The following table shows the principal items exported to the United States as invoiced at this consulate in 1910 and 1911:

Articles.	1910	1911	Articles.	1910	1911
Beans.....	\$126,223	\$29,512	Oil, sod.....	\$13,478	\$13,290
Beer.....	864,533	873,499	Paper and paper goods.....	30,062	25,416
Books.....	124,894	152,069	Paraffin.....	60,430	37,524
Buttons.....	35,486	16,885	Porcelain and pottery.....	5,808	3,169
Capsules, metal.....	40,613	45,081	Rice, granulated.....		37,232
Chemicals:			Seeds:		
Barium chlorid.....	23,943	23,587	Clover.....	129,112	250,829
Carbonate of potash.....	7,564	36,905	Sugar-beet.....	32,949	40,329
Oxid of zinc.....	15,244	12,273	Siphon bottles.....	101,431	89,215
Potassium permanganate.....	7,295	13,565	Smokers' articles.....	4,873	6,577
Dress goods.....	21,298	7,853	Steel, tool.....	63,233	52,862
Furniture.....	23,546	29,619	Talc.....	5,768	930
Glassware.....	105,626	109,025	Tinware.....	18,713	26,995
Gloves, ladies'.....	265,571	155,412	Wool, carpet.....	63,262	6,274
Glue and glue stock.....	20,937	8,084	All other articles.....	65,266	79,074
Hair, human, and manufac- tures of.....	394,184	146,575	Total.....	3,147,517	2,906,367
Hops.....	486,285	666,397			

American goods valued at \$617 were returned during 1911. The exports from Prague to the Philippines in 1911 amounted to \$2,000, and to Porto Rico \$2,808.

#### REICHENBERG.

[By Consul William J. Pike.]

The Reichenberg consular district has 2,000,000 of the 7,000,000 inhabitants of Bohemia, and its industrial importance is indicated by the fact that 106,000 of the 198,000 manufacturing firms in Bohemia are located in this district. Its factories employ 500,000 of the 700,000 workmen employed in Bohemia, and it pays over 48 per cent of the taxes. The principal industries of the district, in the order of the number of employees, are the manufacture of textiles, jewelry, glassware, porcelain, paper, artificial flowers, clothing, and millinery articles.

The abnormal dryness of 1911 reduced the crop production of this region to fully 50 per cent below that of 1910 and also seriously

affected the industrial branches by causing a cessation of water transportation and necessitating the heavy importation of food products. The shipments of coal, forest products, etc., were lessened by the loss of the cheap water freight rates. The saving feature for the agriculturist was the general advance in the price of his products.

Reports from the various industries show a material increase over the preceding year in the value of products, with steady prices, and seem to indicate that 1911 may on the whole be considered as satisfactory to industrial northern Bohemia. Of the 20 important factories built in this region during the year, 7 were branches of large German firms. One of the most important undertakings was the erection of a 12,000-spindle spinning mill. The number of new factories in other lines were: Cloth, 5; glass, 4; ironware, chemicals, agricultural machinery, 2 each; electrical supplies, medical supplies, and proprietary medicines, 1 each. Among the causes that lessened the sales of certain lines of goods were the loss of large markets in the East on account of wars there and the general unsettled conditions.

#### **Poor Year for the Textile Trade.**

The most important industry of this region is the manufacture of textiles, in which the United States is concerned, as at least 150,000 bales of American cotton annually find a market here when the mills are working at full capacity. It is said that there are fully 1,250,000 cotton spindles in northern Bohemia, which is nearly one-third of the entire number in Austria-Hungary.

The year 1911 did not start auspiciously for the textile trade, but the season was far worse than had been expected, and especially productive of strikes, lockouts, and the voluntary closing of factories. With the ruling high price of cotton, these made the year unremunerative for weavers, spinners, and printers. The organized groups of spinners curtailed production 25 per cent, but their action did not bring yarn prices up to the proper ratio to the cost of raw material.

In consequence of the accumulation of heavy stocks of yarns, held in expectation of better prices, additional taxation, the loss of cheap freight rates because of closed water routes by reason of drought, and the forced selling at any price obtainable, it is generally believed that not a single spinning concern realized more than 4 per cent upon capital invested, unless by fortunate speculation in the market.

The cotton weavers and printers found work scarce and the prices obtainable for goods out of all proportion to the cost of production, notwithstanding a great reduction in output. Not until the latter part of 1911 was there an improvement noticeable, when, because of prevailing and threatening strikes, wages had to be advanced, which further added to the already excessive cost of production.

While the strikes induced buyers to increase their purchases and assisted the mills in disposing of large accumulations of stock, it would be wrong to assume that weaving establishments bettered their condition. The increased demand caused the spinners to advance prices in yarns, which left the manufacturer with no better margin.

The business in colored goods, in keeping with the entire cotton industry for 1911, was poor, and manufacturers of zephyrs especially suffered because of the sudden change in fashion and the lack of demand for these goods, which normally constitute one of the chief lines of the colored-goods trade.

Competition in printed cotton goods became acute during 1911, principally on account of the withdrawal from the Cotton Printers' Association of an important firm, owning a controlling percentage of the printing machines in Austria. Exports showed a slight increase, but this was solely due to the cutting in prices to meet competition abroad and in some cases brought the price below the cost of production.

The principal foreign markets enjoyed by the textile trade in order of importance are as follows: Germany, France, England, Balkan States, Turkey, Greece, Italy, Egypt, India, United States, and South America.

#### **Bohemian Linens and Glassware.**

The manufacture of Bohemian linens has reached a perfection in this district which makes it world known, and its product finds a ready market in every civilized country. About 35,000 people are employed in this trade. An inferior quality of Russian and domestic flax, a scarcity of skilled labor, and a hitherto unknown lack of water all contributed to make 1911 an unsatisfactory year. Attempts were made to advance prices to meet the unfavorable conditions and the increased costs of material and production, but without much success. Values were also weakened by the favorable prospects for the new flax crop in the autumn, which influenced buyers to hold back orders. Home consumption was below normal. Germany bought only moderately, England and Italy were scarcely in the market at all, as compared with other years, and these factors, added to the wars in the East and the reserve of American buyers, made the trade unsatisfactory.

The quality and quantity of home-grown flax were fairly satisfactory in 1911, although not up to what had been expected from the increased acreage put in cultivation. The drought was detrimental to both the growth and the process of steeping.

The manufacturers of Bohemian glassware and of porcelain experienced a fairly prosperous year during 1911, although there was a smaller demand for some articles toward the close of the year. These two trades give employment to 52,500 workmen and have a total output of \$23,000,000. A number of new factories have recently been erected, and it is interesting to note that American machinery has been installed that has proved highly satisfactory, both in saving labor and in the character of the product. Hollow and pressed glass and cut-glass articles, especially those for settings of silver and German silver, were in good demand for both the home and export trade. North and South America, England, the Netherlands, Belgium, and the Balkan States form the best foreign markets.

#### **Jewelry Making at Gablonz—Banking Facilities.**

It is doubtful if any other community in the world engaged in the manufacture of the cheaper grades of jewelry produces more artistic and delicate articles than the workmen of the Gablonz district. This industry dates back into the Middle Ages, and, through long experience and the aid of special technical schools, the workers have developed a wonderful degree of skill. This district is the chief market of the world for imitation precious stones and supplies most of the manufacturers of the cheaper grades of jewelry in every country. Only a small percentage of the stones are made by machine, the machinery being of recent invention. The greater portion of

the enormous output is hand cut. For this trade in general, 1911 was much better than 1910, especially in the market for fancy buttons, decorative glass ornaments for chandeliers, etc., and the production is estimated at \$20,000,000. Exports increased to all countries except the United States.

In the small city of Reichenberg alone, with a population of 37,000, 10 new and important banking institutions have been established within the past decade, and conditions were so favorable that a number of new concerns were organized in this district in 1911. Five were started in two cities. The larger banking houses pay 4 per cent interest on checking accounts, and the rate rarely falls below 3½ per cent, while 4½ and 5 per cent is frequently paid in the smaller savings banks and associations, which are considered perfectly safe. In Reichenberg alone, the deposits in three savings banks amounted to \$14,210,000.

#### Opportunities in Bohemia for American Trade.

It is a matter of serious doubt if this district offers great opportunities for the direct importation of American products, as there are no large or populous centers, nor are there concerns doing an import business. Prague is the largest city, with 37,000 population, and there are 13 other cities having 10,000 or over. The purchasing power of these communities is not comparable to like municipalities in the United States. While a fair amount of American goods are to be seen in this district, such as typewriters, sewing machines, cash registers, adding machines, office furniture, toilet articles, dried fruits, canned goods, etc., investigation shows that in every instance they were bought through large importing firms in Hamburg, Bremen, Berlin, or Vienna, and generally sold in the local market by traveling representatives of the importers.

While the purchasing power of the people is fully up to the average of European countries, the market can best be reached by the establishment of branches in large seaport towns, or by business connections with foreign importing houses which canvass the territory. Illustrated catalogues printed in English, in most cases, only serve to give ideas to the ever-watchful competitor.

#### Exports to the United States.

The exports from this consular district to the United States, as shown by the invoices declared at this consulate, were as follows during 1910 and 1911:

Articles.	1910	1911	Articles.	1910	1911
Beads.....	\$114,521	\$248,705	Metal ware.....	\$13,700	\$11,727
Buttons, glass, ivory, etc.....	97,715	104,183	Needles.....	14,897	19,837
Carpets and rugs.....	80,166	77,100	Porcelain and pottery.....	18,085	12,566
Cotton goods.....	95,225	67,897	Stones:		
Cutlery.....	39,669	33,035	Precious.....	12,162	7,612
Flowers, artificial.....	104,691	61,764	Imitation.....	762,223	538,511
Glassware.....	248,090	264,200	Sparterie.....	35,315	25,229
Hair, human.....	15,961	741	Woolen manufactures:		
Hops and lupulin.....	82,005	42,640	Blankets.....	8,304	11,453
Hides.....		12,078	Other.....	128,549	65,219
Jewelry, etc.....	679,461	421,056	All other articles.....	64,814	41,082
Lamps, etc.....	121,965	123,585			
Linens.....	438,120	431,232	Total.....	3,184,008	2,621,430

The exports from Reichenberg to the Philippines amounted to \$15,190 in 1910 and to \$14,403 in 1911. Enamel ware was the

principal item in both years, being valued at \$12,072 in 1911. To Porto Rico were sent goods valued at \$1,131 in 1910 and at \$1,475 in 1911. The exports from Reichenberg to Hawaii totaled \$691 in 1910 and \$775 in 1911.

### **FURTHER COMPLAINT OF SHORT-PAID POSTAGE.**

[From Vice Consul Wm. H. Orrett, Kingston, Jamaica.]

Letters from the United States insufficiently stamped continue arriving in Jamaica. Of course, in the case of such short-paid letters being received here the postage has to be paid with a penalty charge, but several merchants have informed me that they invariably refuse to receive them, especially when the letters are from new firms. No doubt the mistake arises from the fact that many American firms are under the impression that the 2-cent rate now in vogue between Great Britain and America also applies to the British colonies. American postmasters might perhaps be able to remedy the trouble by causing a notice to be placed in the respective post offices.

#### **Simple Plan Suggested.**

The manager of the foreign department of one American company describes to the Bureau of Manufactures his method for insuring full postage on foreign letters:

It seems to me a very simple rule, instead of leaving the determination of the amount of postage to a mailing clerk, who in the average office is a more or less irresponsible office boy, to have the stenographer who addresses the envelope for a foreign letter mark the amount of postage prominently in the upper right-hand corner, where it can not be overlooked in stamping. This easily becomes a matter of routine for the stenographer in the habit of writing foreign letters and the result is well worth the small amount of time involved.

I might suggest, further, that the manager of the department, who is the one to really have the matter at heart, after signing a foreign letter, glance at the envelope to see that the stenographer indicated the amount of postage. This would serve as a double check on the system. In cases where I have doubt as to whether a foreign letter may be overweight, I place a "?" after the amount as a hint to the mailing clerk to weigh it before stamping.

### **FRUIT GROWERS TO IMPROVE PACKING.**

The Grand Junction Fruit Growers' Association of Grand Valley, Colo., has decided to improve its apple packing by the adoption of the following measures:

Use of the uniform layer pack.

Registration of packers.

Establishment of schools for instruction of packers.

Growers of the section say:

Fruit growers of the Northwest have used the layer pack two years. It necessitates grading of all apples, but makes a beautiful looking box and one which sells more readily than the jumble pack used here. Registration of packers and schools for instruction of packers are new moves. Registration will insure an honest pack. The schools will be conducted in every section by experts paid by the association.

The Chicago daily package-car service is described and illustrated in the May 31 issue of the Chicago Commerce, published by Chicago Association of Commerce. Maps show the break-bulk points. J. F. Morton, superintendent of the package-car service also announces that the sixth edition of the freight traffic committee's handbook, entitled "How to ship," is now ready.

**SULPHUR, PYRITE, AND SULPHURIC ACID.**

[From advance chapters from Mineral Resources of the United States, issued by the Geological Survey; see also Daily Consular and Trade Reports for May 3, 1912.]

The production of sulphur in the United States in 1911 amounted to 265,664 long tons, valued at \$4,787,049, as compared with 255,534 tons, valued at \$4,605,112, in 1910. In determining the value of most of the sulphur produced in 1911 the current market prices in New York were taken, from which the value at the mine was then computed. It is estimated that the production for the year 1911 is very close to the present rate of consumption.

Prices remained fairly constant throughout the year at approximately \$22 per long ton at New York for prime Louisiana sulphur, and at \$22.50 at Boston, Philadelphia, and Baltimore. Quotations on roll sulphur were from \$1.85 to \$2.15 per 100 pounds; for flowers of sulphur the range was from \$2 to \$2.40 per 100 pounds; and for sublimed sulphur it was from \$2.20 to \$2.60 per 100 pounds. Sicilian sulphur was held at the same figure.

In 1911 there were imported for consumption into the United States 29,144 long tons of sulphur, including crude, refined, flowers of sulphur, and other kinds. This sulphur was valued at \$552,836. In 1910 the imports amounted to 30,833 long tons valued at \$558,611. The great bulk of the sulphur imported comes from Japan.

In 1909 the United States exported 37,142 long tons of sulphur, valued at \$736,928; in 1910 the exportation amounted to 30,742 tons, valued at \$552,941; in 1911 the exports totaled 28,103 tons, worth \$545,420.

**Production of Pyrite—Sulphuric-Acid Industry.**

The production of pyrite in the United States in 1911 amounted to 299,904 long tons, valued at \$1,162,261. This was an increase in quantity of 58,292 long tons and in value of \$184,283, as compared with the production of 1910. The figures are also the maximum ever recorded by the survey for the pyrite industry. Though low-grade sulphide ores of copper containing considerable quantities of pyrite and pyrrhotite and zinc sulphide concentrates have been used in recent years in the manufacture of sulphuric acid, this condition of affairs does not seem to have curtailed the output of pyrite, as it was feared it might. As a matter of fact, the output of pyrite has shown a great increase during the last five years, notwithstanding this was a period of rapid development of the by-product sulphuric-acid industry. It is estimated that the quantity of sulphides other than straight pyrite used in the manufacture of sulphuric acid in 1911 was equivalent to 200,000 long tons of pyrite, which would bring the tonnage of this mineral theoretically produced in 1911 up to nearly 500,000 long tons. This does not include copper-bearing Spanish pyrite used in making sulphuric acid.

The importation of pyrite still greatly exceeds the domestic supply, as appears from the following statement of imports for consumption for the last three years: 1909, 688,843 long tons, value \$2,428,580; 1910, 803,551 tons, value \$2,748,647; 1911, 1,006,310 tons, value \$3,788,803.

For the first time in the history of the volume Mineral Resources, published by the Geological Survey, a brief statistical statement is made of the sulphuric-acid industry. One of the reasons for adding

the subject of sulphuric acid is that, owing to the fact that so large a percentage of the output of sulphur and pyrite is converted into acid for use in the industries, the acid production becomes in a way a check on the statistics of sulphur and pyrite, especially of pyrite, which is practically all used in the acid industry. Another reason for collecting the statistics of sulphuric acid is because it is a commodity so extensively used in the manufacture of other chemicals that it has come to be regarded as a criterion or gauge of the activity of the country in chemical manufactures in general. Sulphuric acid is probably used for a greater variety of purposes in the chemical arts than any other substance.

#### **Varied Uses of Sulphuric Acid—Production.**

According to Lunge, the principal applications of sulphuric acid are the following:

1. *In a more or less dilute state (say from 144° Twad. downward).*—For making sulphate of soda (salt cake) and hydrochloric acid, and therefore ultimately for soda ash, bleaching powder, soap, glass, and innumerable other products. Further, for superphosphates and other artificial manures. These two applications probably consume nine-tenths of all the sulphuric acid produced. Further applications are for preparing sulphurous, nitric, phosphoric, hydrofluoric, boric, carbonic, chromic, oxalic, tartaric, citric, acetic, and stearic acids; in preparing phosphorus, iodine, bromine, the sulphates of potassium, ammonium, barium (blanc fixe), calcium (pearl-hardening); especially also for precipitating baryta or lime as sulphates for chemical processes; sulphates of magnesium, aluminum, iron, zinc, copper, mercury (as intermediate stage for calomel and corrosive sublimate); in the metallurgy of copper, cobalt, nickel, platinum, silver; for cleaning (pickling) sheet iron to be tinned or galvanized; for cleaning copper, silver, etc.; for manufacturing potassium bichromate; for working galvanic cells, such as are used in telegraphy, in electroplating, etc.; for manufacturing ordinary ether and the composite ethers; for making or purifying many organic coloring matters, especially in the oxidizing mixture of potassium bichromate and sulphuric acid; for parchment paper; for purifying many mineral oils, and sometimes coal gas; for manufacturing starch, sirup, and sugar; for the saccharification of corn; for neutralizing the alkaline reaction of fermenting liquors, such as molasses; for effervescent drinks; for preparing tallow previous to melting it; for recovering the fatty acids from soapsuds; for destroying vegetable fibers in mixed fabrics; generally, in dyeing, calico printing, tanning, as a chemical reagent in innumerable cases; in medicine against lead poisoning, and in many other cases.

2. *In a concentrated state.*—For manufacturing the fatty acids by distillation; purifying colza oil; for purifying benzine, petroleum, paraffin oil, and other mineral oils; for drying air, especially for laboratory purposes, but also for drying gases for manufacturing processes (for this, weaker acid also can be used); for the production of ice by the rapid evaporation of water in a vacuum; for refining gold and silver, desilvering copper, etc.; for making organosulphonic acids; manufacturing indigo; preparing many nitro compounds and nitric ethers, especially in manufacturing nitroglycerin, pyroxylin, nitrobenzene, picric acid, etc.

3. *As Nordhausen fuming oil of vitriol (anhydride).*—For manufacturing certain organosulphonic acids (in the manufacture of alizarin, eosin, indigo, etc.); for purifying ozokerite; for making shoe blacking; for bringing ordinary concentrated acid up to the highest strength as required in the manufacture of pyroxylin; and for other purposes.

The 1911 production of sulphuric acid in the United States aggregated 2,210,330 short tons, valued at \$17,369,872, as follows: 50° Baumé, 1,026,896 tons, value \$5,447,958; 60° Baumé, 421,165 tons, value \$2,624,042; 66° Baumé, 751,541 tons, value \$9,176,297; other grades, 10,728 tons, value \$121,575.

Consul Thomas E. Heenan reports that the total population of Warsaw, Poland, on January 1, 1912, was 821,369, an increase of 24,276 in 12 months.

**GERMAN IMPERIAL UNEARNED-INCREMENT TAX.**

[From Consul General A. M. Thackara, Berlin.]

The unearned-increment tax was first assessed on German territory in Kiaochow, China, in 1898. In Germany proper the tax was first levied in 1904 in the city of Frankfort on the Main, and from that date its use so increased that by the 1st of April, 1910, it existed in 457 communities and 13 counties, a large part of which were in Prussia. In April, 1910, a bill was introduced in the Reichstag to enact an unearned-increment-tax law covering the whole Empire. On February 1, 1911, this bill passed with 199 yeas and 93 nays, 20 members not voting.

The new law, which went into effect April 1, 1911, superseded all existing statutes bearing on the taxation of the unearned increment. However, those communities where an unearned-increment tax existed on April 1, 1909, will continue to receive until April 1, 1916, an amount equal to what they have been receiving, on the average, in the preceding years. After that date the cities will receive a small proportion of the imperial tax.

According to the provisions of the law, the tax is at present calculated on the basis of the value of the real estate on January 1, 1885, without reference to prices paid or received prior to that date, unless the owner can prove that he or his predecessor had previously paid a higher price. In taxing the unearned increment after April 1, 1925, unless there has been a transaction which determines the value within the past 40 years, the value of the real estate 40 years before date will be taken as the value on which the tax is to be computed, unless the owner can show that either he or his predecessor has paid a higher price for the real estate at some time more than 40 years previously.

**Rate of Taxation.**

The rate of taxation varies from 10 to 30 per cent. The highest rate is imposed when the value of the real estate has increased 290 per cent or more and the lowest rate when the increase is less than 10 per cent. The following table gives the rate of taxation:

Increase of value.	Tax on increase.	Increase of value.	Tax on increase.
	<i>Per cent.</i>		<i>Per cent.</i>
Up to 10 per cent.....	10	200 to 210 per cent.....	21
10 to 30 per cent.....	11	210 to 220 per cent.....	22
30 to 50 per cent.....	12	220 to 230 per cent.....	23
50 to 70 per cent.....	13	230 to 240 per cent.....	24
70 to 90 per cent.....	14	240 to 250 per cent.....	25
90 to 110 per cent.....	15	250 to 260 per cent.....	26
110 to 130 per cent.....	16	260 to 270 per cent.....	27
130 to 150 per cent.....	17	270 to 280 per cent.....	28
150 to 170 per cent.....	18	280 to 290 per cent.....	29
170 to 190 per cent.....	19	Over 290 per cent.....	30
190 to 200 per cent.....	20		

The high rates are rarely assessed, as large increases in value occur only after the real estate has been held by the same owner for a long period, whereby, according to paragraph 16 of the law, there is a great reduction on account of long tenure. For every year that comes into consideration in levying the tax  $2\frac{1}{2}$  per cent is added to the value of real estate valued up to 100 marks per are (2.21 cents per square foot). When the value is more than 100 marks per are,

2½ per cent is added to that part up to 100 marks, and to the part above this sum 2 per cent is added if the land is not improved and 1½ per cent if improved. As a result of this allowance any real estate whose value is increasing gradually and whose ownership remains unchanged is, in the event of a sale, in part or wholly relieved from paying this tax.

#### Provision for Reduction of Tax.

In addition to the foregoing far-reaching provision for length of ownership, paragraph 28 of the law provides that the tax be lessened by 1 per cent for every entire year considered in assessing the tax. If the property was acquired before January 1, 1900, the reduction is 1½ per cent a year for the whole period up to January 1, 1911. Commenting upon the law, Dr. W. Boldt, of the city council of Dortmund, says:

By this twofold reduction the extremely large gains which are realized in the large cities as the result of original possession or of acquisition many years ago through speculation are favored entirely too much. While this allowance for an increase of value without taxation, provided for in paragraph 16 of the law, is thoroughly approved of in principle, it seems urgently to be desired that the reduction of the tax provided for in paragraph 28 of the law should be done away with or considerably lessened in the event of the revision of the law. This reduction of the tax, besides favoring the increased values provided for in paragraph 16, benefits particularly the large property holders and real estate which was acquired through speculation many years ago, as well as encouraging the retention of real estate in the large cities for speculative purposes.

Certain transactions are exempted in levying the tax, of which the following are the principal: (1) Inheritances, so far as this would cause double taxation owing to the inheritance-tax law; (2) changes in the tenure of real estate on account of marriage or in certain other family transactions; (3) the exchange of real estate to improve the shape of adjoining property.

In this rapid survey of the law it has not been possible to mention some of the important details involved. "Das Reichszuwachststeuergesetz," by Dr. W. Boldt, contains the law in full, together with commentaries on each paragraph by the author. The cost of the book is 3 marks (75 cents).

### UNDEVELOPED BORNEO.

[From Consul Orlando H. Baker, Sandakan, British North Borneo.]

North Borneo is a wild and uncultivated country, without even roads for wagons. A few strips of short roads for carts are found about the seaports, but none to justify the importation of a motor car. Travel about the towns is by jinrikishas, by sedan chairs, or pony carts. Travel into the interior is by rivers; footpaths only connect settlements between rivers. After two or three years, when the rubber estates are developed, there may be roads built and a call for automobiles.

Dutch Borneo obtains supplies from Batavia, Java; Sarawak from Singapore; and North Borneo from Singapore, Hongkong, and Manila. Retail business in Sandakan is carried on mostly by Chinese. Of the two importing firms one is German, the other English.

Those wishing to secure a full account of the resources and business of this island should secure a copy of "Wild Men of Borneo and the Land They Live In," published by Harper & Bros., New York.

**FRENCH CONGRESS FOR FOSTERING FOREIGN TRADE.**

[From Commercial Agent Archibald J. Wolfe.]

From June 24 to 28 there will be held in Paris a National Congress of the French Domestic, Foreign, and Colonial Chambers of Commerce to consider ways and means for promoting French export trade, removing the handicaps under which it is suffering, and principally for considering the question of organizing facilities for financing foreign business. Official bodies will have the right to send 10 delegates each to the congress.

The French trade has long felt that its share of foreign business is practically limited to products in which there is no foreign competition—that is, products essentially French in character, style, and workmanship—and that in lines in which foreign competition is encountered the French are handicapped, mainly by reason of having no machinery for financing foreign business.

The congress will discuss the following subjects: Improvement in the organization of the foreign commerce of France, long-term credit in foreign trade; development of maritime relations with South America, the Far East, Algeria, Tunis and Morocco, and the west coast of Africa; improvement in ways of communication between Marseille, Bordeaux, Lyon, and Geneva; customs relations between the colonies and the motherland; professional instruction for maintaining the superiority of French products and for training French representatives for foreign commerce; and military service of Frenchmen located abroad.

**Preliminary Report—French Discount Bank.**

The secretary of the committee on long-term credit has submitted a preliminary report which makes interesting reading for Americans in view of the fact that there are certain features in common between the difficulties of American and French manufacturers in financing foreign shipments. This preliminary report recites the handicaps of the French manufacturer as compared with his British and German competitors in satisfying the demand of the foreign customer for long-term credit. It describes the present insufficient means of the French exporter in drawing on customers abroad and disposing of the bills thus created.

The Bank of France in dealing with foreign bills is limited by its statutes to handling bills drawn for not more than 90 days and provided with three signatures. Being a monetary institution, it is bound to exercise the greatest prudence and will not discount bills excepting for customers whose financial standing is of the very highest. It requires securities which an ordinary exporting manufacturer finds irksome to provide in negotiating foreign bills. The report states that there is danger in negotiating bills through the Paris branches of foreign banks, as this makes possible a leakage of information.

Various attempts have been made to establish a bank for the discount of foreign bills, whose functions would include the encouragement of the French foreign trade by all possible means, the mobilization of long-term credits, the organization of a commercial information service, and the creation of a network of correspondents in foreign countries preparatory to establishing branches abroad. The

death in 1909 of Mr. Siegfried, who was the moving spirit of the enterprise, brought it to a temporary end, but the project was taken up anew in 1910, and a number of independent committees, private and Government aided, worked out plans for such a bank, as well as a draft of a bill to enable the Bank of France to deal with the foreign acceptance business.

#### Roubaix Textile Trade Bank.

For some time there has been in existence in the city of Roubaix an establishment furnishing the following facilities exclusively for the textile export trade: It discounts 9 months' bills drawn by manufacturers on foreign customers in favor of French manufacturers; it conducts a del credere business, being a guaranty of commercial risks abroad; it finances and facilitates selling expeditions in foreign markets by groups of noncompeting manufacturers; it procures reliable permanent representatives abroad. The name of this enterprise is Comptoir Français d'Exportation. In organizing a bank for this business the difficulty was encountered of adapting an enterprise with a capital supply at short call to finance operations with long datings.

### INCREASED TRADE OF CHINESE PORT.

[From Consul A. A. Williamson, Antung.]

Contrary to expectation, the trade of Antung for the first quarter of the current calendar year was in excess of that for 1911, but it is not yet possible to tell whether this is a real increase or simply a stocking-up movement after the close winter season. The principal articles imported from foreign countries and Chinese ports as shown by the Antung customs records for the first three months of 1911 and 1912 were:

Articles.	1911	1912	Articles.	1911	1912
<b>Breadstuffs:</b>			<b>Cotton goods—Continued:</b>		
Flour.....piculs <sup>1</sup> .....	11,792	16,799	Yarn, Japanese.....piculs.....		125
Malt.....do.....	140	7,066	Woven, colored.....yards.....		9,422
Rice.....do.....	15,982	5,368	Fish, dried and salt.....piculs.....	535	2,653
Charcoal.....do.....	4,129	1,322	Hides, cow.....do.....	798	3,277
Cigarettes.....mille.....	21,620	6,463	Iron and mild steel.....do.....	181	214
<b>Cotton goods:</b>			Matches.....gross.....		10,200
Blankets, Japanese.....pieces.....		3,842	Milk, condensed.....dozen.....		427
Cloth, Japanese.....yards.....	19,439	108,703	Needles.....mille.....		2,545

Thread on spools.....gross.....		153	Timber, planks.....sq. ft.....	56,018	
Towels.....dozen.....	2,315	6,212	Umbrellas, cotton.....pieces.....		2,310

<sup>1</sup> Picul=133½ pounds avoirdupois.

Among the chief articles of Chinese produce exported to foreign countries and Chinese ports during the same period of 1912 were: Bean cake, 164 piculs; beans, 1,403 piculs (39 piculs in 1911); samshu, 1,275 piculs (725 piculs in 1911); raw wild silk, 631 piculs (228 piculs in 1911); wild cocoons, 12,568 piculs (4 piculs in 1911); cocoon refuse, 16 piculs; softwood beams, 17,499 pieces (423 in 1911); softwood poles, 2,959 pieces (297 in 1911).

**CONSTRUCTION WORK ABROAD.****ITALY.**

[From Consul Chapman Coleman, Rome.]

**New Federal Government Buildings.**

In addition to largely augmented traffic and other facilities afforded during the past year, generous provision for a greatly augmented embellishment of Rome and the more convenient dispatch of public business has been made by legislative appropriations of large sums for constructing a series of new Government buildings, for the Ministry of the Interior, in the Via Panisperna; for the Ministry of Public Instruction, in the Viale del Re, at the foot of the Janiculum; for the Ministry of Justice, in Via Arenula, near the Garibaldi Bridge; for the Ministry of Marine, on the Lungotevere Arnaldo da Brescia, close to the Margherita Bridge; and for the Corte dei Conti (Court of Accounts), on the site now occupied by the Villa Pallavicini, outside Porta Salaria.

While only the architectural designs of these constructions are yet under consideration, attention is being given by the consulate to this matter, with a view to furthering at the proper time the interests of American trade by calling attention to possible opportunities for participation in furnishing materials and office equipment required in the new constructions.

---

**SERVIA.**

[From Consul Maddin Summers, Belgrade.]

**General Building Activity.**

Belgrade is a modern city of nearly 100,000 inhabitants. Its situation on the Danube is most favorable for American trade, as shipments from any port in the United States can be sent cheaply by all-water route. It is also the distributing center of all products imported for other parts of the Kingdom.

In the last few years the city has made great progress. The financial situation of the country could not be better, and financial obligations are met with scrupulous promptness. On every side handsome, modern, and costly buildings are being erected, some by the Government, some by private individuals. The National Parliament Building is now being completed. Plans are on foot for the erection of other national and municipal buildings, while the number of modern houses being built to meet the exigencies of a prosperous people is very large. The city is now being thoroughly overhauled, and in each street an excellent drainage system is being placed. Large improvements in the construction of harbors and ports is also contemplated, the principal one being the building of the Bratovo Port, connecting the Danube therewith by railroad with the Adriatic.

**Iron Girders and Building Construction Material.**

For all this construction work one of the principal articles, namely, iron girders, come principally from Austria and Germany. The importations are rapidly increasing, amounting in 1911 to 3,000 tons. These girders are sold in Servia according to the rules of the Deutscher Verband (German Steel Trust). They are of normal profiles and in length from 12 to 15 meters; extra widths according to the fixed

extra prices; extra wide girders, system Grey, length 15 meters, width, 10 to 40 centimeters.

The prices at which dealers here closed some time ago ranged from 160 to 165 francs (\$30.88 to \$31.74) per ton c. i. f. Belgrade by water transport from Austrian works. Servian merchants are making purchases of 200 to 600 tons, paying against documents.

The goods could be shipped from the United States via Saloniki, Turkey. It is not advisable to ship them via Fiume or Trieste, as the railway rates from those ports to Belgrade are rather high and would consume the profit.

---

### AUSTRIA.

[From Consul General Charles Denby, Vienna; see also Daily Consular and Trade Reports for Sept. 10, 1909, Oct. 3, 1910, and Feb. 23, 1912.]

#### Waterway Construction in Austria.

The Austrian Government, according to a decision of the Ministers made public on May 29, contemplates increasing the sum to be devoted to waterway construction by applying the further sum of \$7,000,000 to the \$70,000,000 provided in the bill brought before Parliament in December last. The exact disposition of this fund is not yet determined, but it is in general decided to employ it in Bohemia, Lower Austria, and the Alpine sections of the country. In Bohemia there is a demand for new dams and for regulation of the Elbe. There is a conflict of views as to the work to be done in Lower Austria. In the Alpine sections it is proposed to construct aqueducts and drinking-water conduits and to pay for some work already done.

The Austrian Government contemplates spending \$78,155,000 in various ways for canalization, water supply, etc., during the period 1913-1927. It is impossible, however, at this time to state exactly when and where the work will be done or to indicate to American manufacturers how they may offer machinery therefor. It might be advisable for American engineers and contractors to watch the development of the Government's plans through the public press or through local representatives. It is probable that large contracts when given will provide for preference for local contractors, though the specification of foreign machinery will probably be allowed.

---

### ARGENTINA.

[From Vice Consul General Albert G. Ebert, Buenos Aires; monetary statements in United States gold.]

#### New Construction Regulation—Three New Steamers.

Hereafter all contractors will be obliged to put up notices in front of an edifice which is being constructed or repaired, giving the name of the contractor and his address. Failure to do this will be punishable by a fine.

The Argentine Board of Hydraulic Works has been authorized to call for public tenders for providing three steamers, one for passengers and two for cargo, for the navigation of the Rio Bermejo; the cost of the three vessels is estimated at \$70,000 gold.

#### New Bridges.

The Argentine Minister of Public Works has approved the plan and the estimated cost of \$133,288 of the Board of Bridges and Roads for a bridge for vehicles over the River Guachipas in the road from

La Vina station to Guachipas. The technical office in Europe is to invite tenders for providing the metal part of the bridge, and the board is to prepare the conditions of tenders for the works on the ground.

La Dirección General de Puentes y Caminos (Office of Bridges and Roads), Buenos Aires, has been authorized to draw plans for a draw-bridge to cross the Rio Bermejo on the road from Chaco to Formosa, for which work \$29,722 has been allotted.

**Electric-Light Installation.—New Freezing Plants.**

The Departamento General de Arquitectura, Buenos Aires, has been authorized to call for tenders for electric-light installation at the Instituto Nacional de Bacteriología. The cost is estimated at \$1±7,121.

At Rio Santiago, near La Plata, erection has been begun on a new freezing establishment. Another big business of the same nature is projected and building operations are about to be initiated.

**New Business Structures.**

Gath & Chaves (Ltd.), a large department store in Buenos Aires, announce another issue of preference shares to the extent of £1,000,000 (\$4,866,500) in London. With this new capital the firm will extend its business throughout the continent. A new place of business is soon to be erected in this city.

The Bolsa de Comercio will erect a new building on a site covering 4,000 square varas (about 32,000 square feet).

[From the London Times.]

**Bridges for Argentina.**

Among the orders for South American railways recently obtained by an English firm (of Thornaby-on-Tees) is one for a bridge of six-deck spans of 20 meters clear to carry the Caneete branch of the Buenos Aires & Pacific Railway over the River San Juan, and four-deck spans of 20 meters clear for single-span bridges over other rivers. The firm recently shipped for the same railway company a four steel-skew span bridge to replace the existing single-track bridge over the Calle San Martin at Mendoza. This bridge is arranged for a double track, and the trough flooring rests on cross girders bearing on three-plate girders at 15 feet 7½ inches centers. The girders rest on built-up steel columns 16 feet high, and the total width of the bridge inside of hand railing is 32 feet 9 inches. For crossing the Calle Coronel Plaza, Mendoza, the same firm recently shipped a bridge consisting of four square spans, the center one being 22 feet 11½ inches center to center of columns, and the end ones 9 feet 10½ inches from center of columns to faces of abutments.

---

**COLOMBIA.**

[From Consul Isaac A. Manning, Barranquilla.]

**Proposed Public Works and Enterprises at Cali.**

At Cali, in western Colombia, a number of public improvements are in contemplation. A company has been formed, at the instigation of the Central Board of Ornamentation, for constructing a theater. The municipal council has also contracted with the electric light company to double the number of public lights supplied, and Cali will, it is said, be the best lighted city of the Republic. This will call for an extension of the electric plant.

The municipal council has also entered into a contract with the railroad company (Ferrocarril del Pacifico) for the preparation of plans for a metal aqueduct, with all reservoirs, etc., for a water service for the city, and also for paving the streets. In case this

work is carried out there will be an opportunity for American manufacturers to supply tubing, cement, grading tools, and perhaps rock crushers and steam rollers.

### PANAMA.

[From Consul General Alban G. Snyder, Panama City.]

#### Construction of New Tramway.

The following notes concerning the building of the new Panama electric line are from the Panama Journal:

The system will consist practically of three lines—one on Central Avenue, one to Balboa, and one on North Avenue to the Sabanas Road and along that road as far as the zone police station, making a total of about 12 miles of track. The Panama Tramways Co. (capital stock, \$750,000) has for its head Minor C. Keith, with C. G. Young, of New York, as consulting engineer. The contractors are R. W. Hebard & Co., and the work must be completed within 14 months from January 23, 1912. Grading work is proceeding and track material is arriving.

### MEXICO.

[From Consul Samuel E. Magill, Guadalajara.]

#### Short Railroad Line from Torreon to Guadalajara.

There is a movement to build a railroad from Torreon to Guadalajara which will shorten the distance between the two cities several hundred kilometers (kilometer=0.62 mile). A glance at the railroad map of Mexico will show the need for it, and that the building of an independent line not only shorter than, but competing with, the National Railways of Mexico—now the only railroad into Guadalajara—will aid greatly in developing the commerce of this the granary of Mexico.

The interests back of this movement do not appear, so it is uncertain whether they are independent of or acting in behalf of the National Railways of Mexico. It may be that the concessions are being sought to be sold to the highest bidder. At any rate Guadalajara needs the competing railroad and hopes to get it.

### THE PHILIPPINES.

[From the Manila Free Press.]

#### Hotel Building—Cog Railway.

Work on the new Iloilo hotel is progressing satisfactorily and it will probably be ready for use in January. The hotel corporation has \$100,000 capital.

It has been determined that an 8-mile cog system will take trains into Baguio on the railroad now being constructed from Aringay. The railroad from Manila to Baguio will be 175 miles long, or 56 miles more than the distance between Manila and Dagupan.

#### Irrigation Preliminaries.

The Irrigation Council, provided for by an act of the legislature, held its first meeting in May. Besides an agriculturist to be appointed by the governor general, the members are as follows: The Secretary of Commerce and Police, ex officio chairman; the chairman of the committee on agriculture, Philippine Assembly; the Director of Public Works; and the chairman of the committee on public works, Philippine Assembly.

#### University Buildings—Water Reservoir.

Bids have been opened for the construction of University Hall, the first of the new university buildings at Manila. The lowest bid is that of the Manila Construction

Co., \$102,500, in 300 working days. The building will be erected on Calle Padre Faura, opposite the old exposition buildings.

Superintendent Gideon, of Manila city water department, has recommended that a reservoir of 2,000,000,000 gallons' capacity be constructed on the Montalban watershed higher up than the reservoir now in use and that another reservoir of smaller capacity be built on the Manila side of the Mariquina River to safeguard the city with an adequate supply of water against the longest possible dry season.

### CHINA.

[From Consul C. L. L. Williams, Swatow.]

#### Proposed Railway from Chaochowfu to Hweichowfu.

The consulate in its annual trade review in Daily Consular and Trade Reports for December 22, 1911, reported that a railway line from Chaochowfu, a prefectural city about 25 miles northwest of Swatow and connected with it by rail to Hweichowfu, another prefectural city, about 60 miles northwest of Kowloon (Hongkong), was under discussion. The recent revolutionary activity throughout the Province caused this, together with many other projects, to be temporarily abandoned, but, according to the Canton press (vernacular), the matter is being taken up again. It is reported that at a meeting of Hweichow and Chaochow merchants the following preliminary regulations for the proposed company were accepted:

1. That the name of the company should be the Merchants Hwei-Chao Railway Co. (Ltd.).
2. The length of the line shall be 246 miles (English), which will be divided into four sections as follows: First section, Chichshih Bay to Hweichow; second section, Hweichow to Haifung; third section, Haifung to Puning; fourth section, Puning to Chaochow.
3. The capital shall be \$20,000,000, Mexican (about \$9,100,000), to be divided into 4,000,000 shares.
4. The shares will be of three classes, namely, (a) 30,000 founders' shares, (b) 500,000 preferred shares, (c) balance ordinary shares.

Should this line materialize, it is reasonable to suppose that an extension will be made from Hweichowfu to connect with the railroad line into Canton. The prospects for raising so large a sum as \$9,100,000 locally are not bright at present. So far as I can learn no survey of the route has been made, but there are few, if any, geographical difficulties. Chichshih Bay is on the coast about midway between Swatow and Hongkong. It is not open to trade, but is reported to be a good harbor. There was some talk of fortifying it as a naval base last year.

### GERMAN SOUTHWEST AFRICA.

[From Consul W. J. Yerby, Sierra Leone.]

#### Linking up the Railway Lines.

The African World of April 6, 1912, says:

The north and south of German Southwest Africa have now been connected by the railway from Windhuk to Keetmanshoop. The company laid the last of the sleepers and rails of the north section on February 17, when the south section was also completed. The new line, the first of the Dernburg railway scheme, is regarded as the first great railway in German Southwest Africa built on the Cape gauge. Together with the section Karibib to Windhuk, which has been rebuilt into the Cape gauge, and the Luderitzbucht-Keetmanshoop railway, it forms a complete uninterrupted railway in Cape gauge of some 650 miles.

**ENGLISH TRADING IN NEAT-CATTLE HIDES.**

[From Consul Benjamin F. Chase, Leeds, England.]

A beginning in the shipment of hides of neat cattle from this consular district to the United States has aroused an interest in the method of procedure in handling hides in this section.

Five concerns sell hides by auction in Leeds, procuring them from the local butchers, classifying and auctioning them once a week. They deduct their commissions and pay the balance to the butchers. The hides are gathered from local butchers and abattoirs by wagons belonging to the sellers or dealers. From outlying districts they are brought in by the individual butchers.

The hides are assorted and classified according to weight and quality. Lists are issued in advance of the auction by the dealers or auctioneers to agents, tanners, and others interested. These lists show the number of hides of each classification and the price prevailing the week previous; they also have columns for the selling price and for the purchaser's name. In event of two or more bidders making the same bid the lot is cast to see who takes them.

The classification of the hides has various ranges: For heifer and ox hides there are six ranges—49 pounds and under, then, by 10-pound limits to 90 pounds and upward; cowhides, four ranges—49 pounds and under by same limits to 70 pounds and over; bull hides—first and second classes. A separate and similar classification is made for cut and damaged hides. Calfskins have six ranges—kips, first class, and second class; cut, under 9 pounds, 9 pounds to 16 pounds, 17 pounds and over.

The rules and regulations are the same for all sellers:

(1) The highest bidder to be the purchaser and in case of dispute the lot to be put up again or auctioneer to decide.

(2) The hides to be taken by the purchaser as classed and at weights marked upon them, and to be moved on the day of sale if required.

(3) Payment to be made in cash (before delivery if required), in default of which the goods to be resold, the loss, if any, to be made good by the defaulter. All payments to be made within seven days and no second lot to be delivered until the previous purchase is paid for.

(4) Not to advance less than one-fourth of a cent per pound on hides and calfskins.

The sale of April 26 amounted to 2,427 hides. The price per pound averaged 13 cents for cow, ox, and heifer hides, 9 to 10 cents for bull hides, 16 to 19 cents for calfskins, kips 12 cents. About 10 agents and tanners attend the sales regularly.

**ELECTROCUTTING ANIMALS IN EUROPE.**

[From Consul Louis Goldschmidt, Nantes, France.]

Inquiry is made in regard to the experiments made at the abattoir here in electrocution of animals for slaughter for food. Dr. S. Leduc, who made the experiments, furnishes the following statement:

I have killed by means of electricity a great number of animals—oxen, bulls, cows, and horses, also hogs, calves, sheep, and dogs. The current was of 110 volts, and the intensity of 40 to 80 milliamperes. The current was interrupted 100 times per second, passing each time during one one-thousandth of a second. See on this subject the pamphlet *Le Sommeil électrique*, Masson, editor, 120 Boulevard St. Germain, Paris.

I experimented solely with a view to study of the subject, and that is why I did not continue. The director of the abattoir at Regensburg (Ratisbonne) came to Nantes to study the question, which is followed up, I believe, in Germany.

**VENEZUELAN BUSINESS NOTES.**

[From Consul Thomas W. Voetter, La Guaira.]

**Market Prices of Foreign Goods.**

Local prices of various imported commodities now are as follows: Bagging, 13½ cents per yard; drills, 12, 16, 22, 24, and 26 cents per yard, according to quality, 27 inches wide, 40 to 45 yards in the piece; gray shirting, 9, 11, 12, 14, and 16 cents per yard, 25 and 26 inches wide, 40 yards to the piece; checks and plaids, same prices and sizes as the gray shirting; white shirting, 5, 6, 7, 8, 9, 12, 16, and 30 cents per yard, 25 and 26 inches wide, 40 yards and also 75 to 80 yards long; prints, same range of prices as the white shirting, 25 to 27 inches wide, 40 yards to the piece.

One criticism of American goods offered here at times is that they are too heavy in weight. This increases the customs duties, all of which are based on gross weight of packages as imported, and as a consequence the selling price must be raised. Wide goods also will not sell, as the price per running yard must be greater than in the narrower goods and the retail customers will not pay for this extra width. Undershirts, now mostly imported from Spain, sell at \$2 to \$4.50 each.

Prices of chinaware are according to quality. For an ordinary set of plain earthenware dishes the price is \$13.

Coal, Cardiff patent briquets, has been selling at \$12 per ton, but this price will probably be raised in the future. A good quality lump coal might interest purchasers.

Canned butter, not pure, "Delicioso" brand, sells at \$32.50 per 100 pounds. Canned fruits sell at \$10 per dozen cans. Rope sells at \$12 per 100 pounds. Men's straw hats sell at from \$16 to \$30 per dozen. Wire nails sell at \$9.20, galvanized nails at \$12, and barbed wire at \$3.60 per 100 pounds.

Native oak-tanned sole leather can be obtained for less than 30 cents per pound, so that American sole leather can not profitably be imported. Cabritilla (kid) is imported, much of it from the United States, and sells here at 13 cents per square foot for poor to 40 cents for good. Glacé kid is imported from France and sells at 35 to 40 cents per square foot.

Rice is now imported from the Far East via Hamburg or Amsterdam. It is probable that if there were direct steamship communication between New Orleans and this port American rice would find a market here.

Perfumery is much used and all classes are imported.

**Paper Trade—American Disadvantages—Steamer Lines.**

American wrapping paper is often considered to be too heavy, and a very thin but strong paper is imported from Norway for wrapping purposes. Italian paper is used for ordinary correspondence on account of its light weight and because it has the ruling desired by the customers. Typewriter papers are frequently American. American or Canadian news paper is imported.

One disadvantage American trade is subject to is that neither in this port nor in the largest city, Caracas, are there any American firms engaged in importing dry goods, etc. The largest firms are composed of men from Germany, France, etc., who have close con-

nections in their native lands and consequently buy most of their goods there. They are also engaged in buying and shipping the coffee, cocoa, etc., produced in this country, and by this means are in close touch with the merchants in the smaller towns.

There are two lines of steamers from New York. The Red D Line has weekly sailings and reaches Venezuelan ports in eight or nine days. The Dutch West India Mail is less frequent and slower, but the smaller cities along the coast east of La Guaira can be reached by it.

#### **American Exchange.**

Merchants in La Guaira would welcome any improvement in banking arrangements between Venezuela and the United States. Frequently they desire to purchase drafts payable in the United States and at times are not able to do so and are obliged to take drafts on Hamburg instead. At other times, however, the amount of American exchange is sufficient for the necessities of business.

#### **Gasoline Scarce and High Priced.**

At present gasoline is selling at about 65 cents per gallon, and it is not always obtainable even at that price, on account of the fact that the passenger steamers running to this port will not carry it. The supply is dependent on the arrival of sailing vessels, which come with other cargo, and it is often many months between the arrival of these schooners. Owing to the uncertainty in the gasoline supply, acetylene seems to be quite popular.

### **SICK INSURANCE IN NORWAY.**

[From Consul B. M. Rasmussen, Bergen.]

The sick-insurance law of Norway was enacted September 18, 1909, and amended April 1, 1911, but did not go into effect until July 1, 1911.

The law embraces all wage earners and public servants over 15 years of age whose yearly earnings do not exceed \$322 if in the rural districts, or \$375 in the cities. The law also provides that the employer shall pay a certain percentage (one-sixth) of the premium, while he is held responsible for the whole, but may deduct from the wages of the insured, at the end of term for which premium is paid, the amount thus advanced. Theoretically it is self-insurance on the contributive plan, while actually it amounts to an extra tax upon the employer, as most employees stipulate when engaging their services that the insurance premium shall be paid in addition to the wages.

The first semiannual report of the committee on invalid insurance for the city of Bergen, just issued, is interesting but not satisfactory, and failed to meet the expectations of the advocates of the law. Instead of an expected surplus, as budgeted, the first six months' operation of the law created a deficit of \$2,270. The committee points out as the main causes for such deficit (1) that the insured seek medical aid for most trivial cases and more frequently than the uninsured, and (2) that applications for sick benefits have increased to an alarming extent.

[An article dealing with the Norwegian system of old-age pensions was published in Daily Consular and Trade Reports on Nov. 25, 1911.]

**HAND EMBROIDERY IN GERMANY.**

[From Consul General Frank B. Dillingham, Coburg.]

Between six and seven thousand women and girls are engaged in Upper Franconia in making hand embroidery, mostly in those towns where home spinning is carried on. In many cases it is the wives and children of the weavers who do the embroidering. The amount earned is a very important addition to the main source of income, especially when business is bad in the hand-spinning industry.

As a rule, embroidering is pursued only as an occupation subsidiary to the main employment, although 2,000 women and girls earn their living entirely thereby. In many cases those engaged in this industry are, first, women of the so-called better class in the smaller towns, who are enabled to earn a little additional pocket money; second, women who can not work in a factory because of their household duties; third, girls who are not set to work in a factory by their parents.

White and colored "plattstich," or plain embroidery stitch, and "ajour" embroidery, as well as "wickelajour" embroidery on table linen, underclothing, etc., are made in the finest qualities.

Large quantities of the finest work are exported to foreign countries, little remaining in Germany because the home market prefers many of the cheap articles made in Teneriffe, which can be placed on the German market exceptionally cheap owing to the low rate of duty on these articles and the small wages paid in Teneriffe. A good embroidery worker in Upper Franconia is able to earn 50 to 75 cents or even more a day.

Much larger sales of embroidery could be made if the embroidery makers were taught new "stickarten," or embroidery stitches, which are now either unknown or little used here. Endeavors are being made to induce the Government to pay the women a small weekly wage out of the State treasury during the time they are learning the new stitches.

---

**ITALIAN TRADE IN GUT STRINGS.**

[From Consul General James A. Smith, Genoa.]

Gut strings are manufactured in Italy, some of cheap quality; those of good quality are made at Rome and Naples in southern Italy, and at Verona and Treviso in northern Italy. Although gut strings are imported into this country, the exports far exceed the imports. In 1911 Italy exported 3,874 pounds of gut strings for musical instruments, at a total value of \$40,692, while 977 pounds, valued at \$5,130, were imported.

Several firms in Genoa make gut strings on a small scale, mostly for surgical use, the work being carried on in private houses. The quality of these is said to be inferior to that used for musical instruments. One large manufacturer of gut strings, of Verona, who exports, sells to dealers in Italy at \$0.58 to \$2.90 for each bundle of 30 strings. The length of gut strings in the market here is about 5 feet, or about two lengths of a violin.

The centers of manufacture of musical instruments in Italy are Bologna, Catania, Cremona, Florence, Milan, Modena, Naples, and Rome.

There is but one tennis club in Genoa, and the use of gut for tennis rackets in this city is very limited.

## FAR EASTERN NOTES.

(From London and China Telegraph.)

*Motor cars* are very popular in Sumatra, and on the east coast it is estimated that taking the European population, there is a car to every nine persons.

*Japanese coal.*—The recent coal miners' strike in the United Kingdom helped Japanese coal to extend its market from Singapore to Colombo. Once Fushun coal has obtained a foothold in the new field, it is unlikely that it will be ousted therefrom completely.

*Light railway.*—A correspondent informs the Siam Observer that the Siam Forest Co. is building a new light railway at its headquarters upcountry. The line will run some 25 miles from the river bank to the forest, and it is expected to prove of great value in getting logs away rapidly.

*Shipbuilding in Japan.*—The Kawasaki Dockyard Co. is pressed with more orders than can be executed, and has under consideration the increasing of its capital from \$5,000,000 to \$10,000,000. The company proposes to establish a shipbuilding yard on the seacoast between Naruo and Imazu with the increased capital.

*Tramway construction.*—Arrangements have been completed in Shanghai for through tramways between the International Settlement and the French Concession. The French and International systems are to be linked at the Bund and South Chekiang Road Bridges, the council having consented to the arrangement. At the latter bridge the necessary alterations will be put in hand at once, and the junction at the Bund Bridge will be made as soon as the new structure is completed.

*Shipbuilding in Hongkong.*—The Asiatic Petroleum Co. has placed with Hongkong shipbuilders an order for a twin-screw steel motor house boat for service at Haiphong. The new vessel will be 61 feet over all by 21 feet 6 inches beam. There have just been shipped from Hongkong to Vancouver, per *Bellerophon*, two motor boats of 28 feet each, two of 25 feet, and one of 40 feet in length, and the same builders have nearing completion two vessels of 60 feet, one of 50 feet, and one of 45 feet in length, all nine vessels being to the order of James B. Wood, of Vancouver.

*Chinese students* are beginning to return to Japan for educational purposes. There were at one time as many as 8,000 of these students in Tokyo, but a few years ago a question connected with their supervision created so much dissatisfaction that a large number of them left Japan altogether. Thereafter this exodus was still further increased by a proclamation of the authorities in Peking to the effect that to proceed to Japan for purposes of elementary education was superfluous, as such education could be obtained very well in China, and finishing education alone should be sought in Japan. Now that order has been restored, Chinese youths are beginning to make their appearance again in the Japanese capital.

*The tea trade* season has commenced, and the Chugai Shogyo has an article by its correspondent at Shizuoka. The total export of tea from Japan is about 42,000,000 pounds per year, and the greater part of the trade, 77 per cent, is in the hands of foreign merchants. There are only two Japanese firms of any importance engaged in the business. Unless the principal one, the Fuji Goshia Kaisha, is able to extend its operations, no other interest will remain to the Japanese houses except the refining of the leaf. The most important factory is that of Messrs. Hellyer, whose new building is reported to be the largest and most perfectly equipped in the Orient. The most noticeable feature of the Japanese tea trade has been the gradual concentration of the trade in Shizuoka, to the detriment of Kobe and Yokkaichi, while the only native Yokohama company has given up business altogether. Although the Japanese engaged in the direct trade with America have been men with plenty of funds and of high spirit they have been quite unable to make the business pay. It was their ambition, remarks the article, to swallow up the American tea trade, but the only result has been the collapse of one firm after another.

## Cotton Crop of Guerrero.

Consul Clement S. Edwards, of Acapulco, writes that the cotton crop of the Mexican State of Guerrero during 1911 was 3,300,000 kilos, or the approximate equivalent of 3,630 short tons. From this there were secured 2,220 metric tons of cotton seed and 1,100 metric tons of cotton, the latter equaling approximately 4,840 standard American bales.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 9064. Novelties of various kinds.**—An American consul in Mexico reports that a business firm in his district wants advertising matter, price lists, etc., of novelties of all kinds made in the United States. Articles are desired that would be suitable for sale by mail order, the weight limit of any article being 11½ pounds.
- No. 9065. Store and sample room for American goods.**—A business man is fitting up a store and sample room in the center of a European city which he will use exclusively to exhibit American products, thus enabling jobbers and dealers to more fully investigate the merits of American goods and serve as an intermediary between the manufacturers in the United States and the local buyers. The business will be managed by this man personally, and he states that he has room for every class of merchandise and would be pleased to communicate with any manufacturer wishing to do business in the country in question. An American consul writes that this is an opportunity that should appeal to any firms already doing business or that would like to establish connections in that country, as this merchant lived for many years in the United States and is thoroughly familiar with conditions in both countries. There will also be a special room for catalogues, price lists, plans, and specifications.
- No. 9066. Shirts, overalls, and ready-made clothing.**—An American consul in a prosperous British colony reports an opening for the sale of a full line of shirts (especially negligee), overalls, children's ready-made clothing, etc. Correspondence giving full details should be in English, and should be sent direct to a firm named in the report.
- No. 9067. Hardware specialties.**—A business man called upon an American consular officer in Canada and requested that he be put in touch with American manufacturers of hardware specialties, metal devices, etc., who desire representation in a certain foreign country. He believes there is a good market for these articles and that he can handle them satisfactorily. He furnishes references and states he would be glad to hear from American firms as soon as possible.
- No. 9068. Five and ten cent goods for variety stores.**—An American consul in the West Indies has been consulted by a member of a new firm about to begin business in a flourishing town with regard to goods for a variety store, with a special department for the usual line of articles sold in 5 and 10 cent stores in the United States. Correspondence in English is solicited.
- No. 9069. Forms for Egyptian Government tenders.**—The American consulate at Alexandria, Egypt, has forwarded an article outlining the manner to be followed by contractors desiring to submit tenders for Egyptian Government work of all kinds and for all administrations. Blank sheets of official Government paper upon which such tenders must be made were also forwarded. Any American firms desiring to submit bids for supplies or works of any kind can secure these blank forms from the Bureau of Manufactures.
- No. 9060. Construction work.**—A company recently organized in a foreign country has taken a contract to build 18 stations, including passenger stations, freight sheds, tool houses, ice houses, and sleeping apartments for employees of a railway company; the stations are to be built with concrete cellars and foundations and wooden superstructures. The amount of the contract is estimated at \$150,000. Three coal trestles will also probably be built by this firm. Letters offering material should be sent direct to the company.
- No. 9061. Railway construction.**—An American consul in Canada reports that a local man has been awarded a contract for the construction of 35 miles of railroad to connect certain coal mines. Work will commence at once and will cost approximately \$35,000 per mile. Another 14-mile railroad, subsidized to the amount of \$25,000 per mile, will be built at once. Offers to supply machinery, material, or supplies should be sent to persons named in the report.
- No. 9062. Fire float.**—Tenders will be opened on July 7 at the offices of the "Junta de Obras del Puerto de Huelva, Calle Vazquez Lopez 14," Huelva, Spain, for a floating fire extinguisher. Tenders must be accompanied by a 5 per cent deposit, and local representation is necessary.

## FOREIGN MARKETS FOR CHILDREN'S PLAY CLOTHES.

[From Consul Augustus E. Ingram, Bradford, England.]

### English Measurements Should be Followed.

In any attempt by American exporters to enter foreign markets through the medium of American consular offices, sending a sample whenever practicable is an excellent plan and in certain cases is likely to be much more advantageous than mere descriptive catalogues and price lists, as the trade can see and examine the article under consideration.

A sample American romper was exhibited to a number of the leading retail establishments in Bradford, and general satisfaction was expressed in regard to the quality and finish of the article. The price was also stated to compare favorably with similar English-made goods. It was suggested that it would be of advantage if the garments were cut to English measurements, as the leg portion of the romper was shorter than is customary here. Some 2½ or 3 inches added to the length would be more acceptable to the buying public and improve the prospects of sale. I mention this point as it was stated in conversation with a retailer that another European nation a few years ago, after having worked up a fair trade in other lines, was pressed to adopt English measurements. It failed, however, to appreciate the necessity for this, with the result that the demand for the articles gradually dwindled away. In this connection I was also informed that American woolen "pantalets" for children have been found too short in the waist to suit entirely the trade in this country.

A further advantage would accrue to American exporters if they gave quotations in English currency and delivered at some port in this country. The nearest for the Bradford district is Liverpool. This would prove an inducement to firms to consider such goods when they would not do so if they had to ascertain the freight, etc., reduce the currency, and make the calculations themselves, as the facilities for having their requirements met in a much easier way in this country are very numerous.

[From Consul James E. Denning, Havre, France.]

**No Present Trade, but a Possible Future Opening.**

An American sample romper was submitted to the Havre customs authorities, who state that, although it is quite impossible to fix the exact rate of duty to be paid, this varying according to the weight of the material used, the rate could not in any case be less than 412 francs (\$79.52), nor greater than 668 francs (\$128.92) per 100 kilos (220.46 pounds). I may add that the customs authorities inform the consulate that no garments of this kind are imported into France, the extremely high duty being an insurmountable obstacle.

In any event no large trade could be expected in France, even with a favorable tariff, without a relatively large expenditure for advertising and exploitation. French children do not dress as do American children, even at the seashore. Their attire is fully as formal as that of adults, and there is practically no knowledge of juvenile utility garments. It is, however, a common habit in France for every family of any position whatever to go into the country or to the seashore, and I have observed in the last year or two a decided tendency to change and simplify children's costumes under the influence of the large numbers of English children who are annually brought to France and other countries of the Continent. I consider the tendency well started, and believe that within two or three years there will be a considerable demand for such goods as American play suits.

The American exporter would encounter competition from French manufacturers, who, while they do not make rompers, are already turning out such aprons, waterproof waders, and other similar goods as are called for by French style, and could probably supply any domestic demand which foreign efforts might create. All such articles, and practically every other article sold in France, must be placed with the trade through traveling men operating from Paris, which is the commercial center of the country and from which every part of the Republic can be reached overnight.

[From Consul P. Emerson Taylor, Stavanger, Norway.]

**Material Must be Suited to the Climate.**

The market in the Stavanger district is chiefly for children's play clothes of part cotton, costing 55 to 80 cents, although in the winter season there is also quite a demand for all-wool suits costing about \$1.90. In men's clothing, both tailored and ready to wear, nothing is sold but all-wool goods, but in small children's play clothes a large quantity of the cotton and part cotton goods finds a ready market.

Owing to the great amount of rain in Norway, there is a heavy demand here throughout the year for children's rubber coats and all-rubber suits. Practically all the school children of all ages wear rubber coats, and in cloth garments for children there is a decided preference for those best adapted to stand much rain. This applies to both play clothes and school clothes, for here, especially among the poorer classes, the same clothes answer for both purposes. This is true also because the children, even of 2 years of age and upward, play much more out of doors than in the United States. The rains are light, though constant, and the climate in winter mild; and the streets and playgrounds throughout practically the whole year are filled with playing children. They are, of course, dressed with warm, heavy, woolen underwear, for woolen underwear is worn universally here winter and summer because of the damp, chilly climate.

[From Consul B. M. Rasmussen, Bergen, Norway.]

**Most Play Clothes Made at Home.**

About a year ago a local concern was persuaded to give a trial order to an American house for men's jackets and overalls, and now the Bergen firm informs me that it has succeeded in establishing a good trade in this line. For overalls especially there is quite a demand, mostly from fishermen, sailors, street laborers, and in fact from all classes performing rough labor.

With children's play clothes it is somewhat different, as these are generally made at home, the better classes employing sewing women by the day or week, while with the poorer classes this work is generally performed by some member of the family. It is not at all improbable that such goods might find a ready market here, but it is absolutely essential that they be cheap, serviceable, and suited to damp weather, as the great majority of customers will most likely be limited to the middle and poorer classes.

[From Consul Robert Frazer, Jr., Valencia, Spain.]

**Outlook Not Promising at Valencia.**

I do not feel very optimistic as to the opening for ready-made children's play clothes in the Valencia district. In the first place is the tariff, which to protect the textile industry of Catalonia is very high on even plain piece goods, while made-up clothing of any sort is subject to the duty on the material of which composed plus a surcharge of 150 per cent. This, with freight, etc., would almost certainly result, it seems to me, in making American products expensive in comparison with similar garments now customarily made in every home here from cheap native Catalan materials. In a country where, for example, factory wages paid women for an 11-hour day range from 14 to 27 cents, a difference of even a very few cents in the cost of a child's garment is not an unimportant consideration and is one in which 95 per cent of Spanish mothers would take a good deal of personal trouble to economize.

Local dealers state that the garments universally used here corresponding to American play clothes are full-length blouses, or smock frocks, generally made from serviceable Mayorquin cloth, costing at retail 10 to 25 cents per meter (meter = 1.09 yards). Such blouses are generally fashioned at home, but are also on sale ready-made at 18 to 30 cents each.

As to marketing American products in Spain, most exporters have found it to their advantage to give a general agency to some large distributing house in Barcelona or Madrid and allow it to deal with subagencies and retailers in other cities. This system has the advantages of greater financial security from bad debts and of meeting competitors with their own methods. That is to say, the small Spanish merchant is accustomed to being approached personally, and Spain is full of traveling salesmen representing Belgian, German, French, and English firms, as well as Spanish importers at Barcelona, which is the commercial center of this country. Therefore the next best plan, in my opinion, to sending out salesmen from the United States is to give a general agency as outlined above, and profit by the already established channels organized by the Barcelona distributing houses referred to. There is very little direct importing of manufactured American products at Valencia, and practically no wholesaling or jobbing in any line of business.

[From Consul José de Olivares, Madras, India.]

#### American Prices Too High for the Indian Consumer.

Some of the leading importers and dealers in ready-made apparel at Madras have expressed the opinion that, while there is a demand hereabouts for children's play clothes, American prices are not sufficiently low to render the introduction of these goods practicable. The dealers inform me that rompers of like style and quality could be made in England to sell at wholesale at not to exceed \$3 per dozen, and here in India they could be copied at even a lower price. The fact is that in southern India the labor and materials that would be employed in such apparel are so cheap that the prospects for marketing foreign goods would seem to be unfavorable.

[From Consul Henry D. Baker, Hobart, Tasmania.]

#### American Styles Not the Same as Tasmanian.

American-made rompers are reported as unsuitable for the Tasmanian trade on account of the style being different from what is worn here, all girls' garments being made with skirt and blouse, none of the pajama effects being in vogue. For boys from 2 to 6 years the most popular styles are in knitted suits with vest and pajamas in one, and this is sometimes adopted for girls, the skirt taking the place of the pajamas. Girls' garments are generally made fairly high in the neck, with three-quarter sleeves for summer wear and full length for winter, materials of various weights being used.

[From Consul B. S. Rairden, Batavia, Java.]

#### Light Cotton Materials for Java.

Play clothes for children in Java are made from the cheapest cotton cloths, and it is very doubtful if a suit of such clothes (generally made for little children in combination style) costs more than 50 cents. Further, such garments for children in this tropical country must be made of very light stuff.

There are no dealers in the Batavia district who handle this line of apparel, such clothes being made either at home or by charitable institutions. The poor schools under religious societies turn out such clothes at very low prices.

[From Consul Thomas W. Voetter, La Guaira, Venezuela.]

#### Customs Duties Prohibitory.

Owing to the high customs duties on made clothing it appears that American firms can not export such articles satisfactorily to Venezuela. The duties alone on such articles would amount to either \$137.05 or \$274.10 United States currency per 100 pounds, the weight of the case being included. It has been estimated that children's play suits can be made here for 60 cents each. Counting in freight and duties, the imported garments would cost more than they could be produced here for and leave no profit for the importer.

Vice Consul James Fisher, of Hull, England, has furnished an abstract of the plan submitted by the Humber Conservancy Board for the improvement of the Humber River. It involves the expenditure of \$1,593,292, most of which is for half-tide training walls.

**INCREASED HOP ACREAGE IN THE UNITED STATES.**

Following the great world scarcity of hops as a result of the unusually small foreign crop in 1911, the hop growers of the Pacific coast have shown a tendency to greatly increase the acreage devoted to hop production. Whether this actually has resulted in increased planting is as yet uncertain, the estimates placing the additional area devoted to hop growing in Washington, Oregon, and California at anywhere from 5,300 to 18,000 acres. The latter figure is likely too large. Two correspondents of the Department of Agriculture place the increase at about the former figure, while press reports give the higher figure. It is said that a large number of people on the Pacific coast who planned to plant hops this year did not do so on account of the high cost of roots and the difficulty of obtaining wire, poles, and other supplies.

According to the United States Census, the area planted to hops in New York State was 27,532 acres in 1899 and 12,023 acres in 1909. In Washington the figures for the same years were 5,296 and 2,433, respectively. In Oregon the acreage increased from 15,433 in 1899 to 21,770 in 1909, and in California from 6,890 to 8,391 in the same period. In Austria-Hungary the area devoted to hop raising has fallen from 65,502 acres in 1908 to 51,919 acres in 1911; in Germany it dropped from 88,585 acres to 65,845 acres in the same time, and in England from 38,921 acres to 33,056 acres. The yield per acre has also declined in those countries.

American growers of hops are finding an increasing foreign demand, the exports for the past three calendar years having been as follows:

Year.	Pounds.	Value	Average per pound.
1909.....	8,955,553	\$1,421,000	\$0.16
1910.....	12,748,017	2,306,795	.18
1911.....	14,104,404	4,258,431	.30

True, back in 1907 the exports were 16,090,959 pounds, but they realized only \$2,862,845, or 17 cents per pound, and exports in 1908 were 21,423,869 pounds, valued at \$2,455,410, or 11 cents per pound. The American Brewers' Review of June 1, 1912, gives the following recent quotations at Chicago: New York hops, 30 to 48 cents; Oregon, 40 to 45 cents; California, 38 to 41 cents; Bohemian, 80 to 90 cents. The American hop quotations in cents, given in the New York Journal of Commerce for June 13, 1912, were as follows: States, 1911, 30 to 45; Pacific, 1911, 40 to 44.

**LOWER CABLE RATES FROM PERU.**

[From Consul General W. Henry Robertson, Callao.]

The Central & South American Telegraph Co. and the West Coast of America Telegraph Co. (Ltd.), the only two companies in Peru having foreign cable services, have made material reductions in some of their rates, in effect from May 1, 1912. The cost per word to the United States, Canada, Germany, Belgium, France, Great Britain, and Holland is reduced from 1.80 soles (\$0.87) to 1.40 soles (\$0.68), and to Italy from 1.90 soles (\$0.92) to 1.50 soles (\$0.72).

## USE OF FOUNDRY OIL.

[From Consul General Frank H. Mason, Paris, France.]

**The Several French Casting Formulas.**

An expert metallurgical engineer has furnished this consulate with the following information concerning the use of foundry oil:

*For casting aluminum.*—In principle, founders avoid the use of glutinous substances in order to preserve the utmost porosity of the sand molds, for which they use a suitable mixture of siliceous and argillaceous sands. But for the cores of complicated molds they use for each 100 kilos (kilo=2.2 pounds) of sand any one of the following substances: From 1 to 3 kilos of dextrine, whale oil, or resinous gum.

*For cast steel, malleable.*—There is employed for molds a clean "poor" sand, with which is mixed 5 to 10 per cent "glutin" or vegetable glue (gliadine). For making malleable steel castings there is also employed clean highly siliceous sea sand, mixed with 2 to 5 per cent glucose.

*For cast iron.*—With a sand maigre (green sand) there is mixed for making cores 2 to 5 per cent of a mixture of equal quantities of linseed oil and dextrine, or linseed oil and molasses.

*For casting bronze.*—For this there are various methods, but the mixture employed for molds by the leading bronze founders of Paris is 60 per cent new sand, 40 per cent old sand, 8 ounces of linseed oil. Some founders use the same combination of old and new sand, but instead of linseed oil they add 2 to 5 per cent of a special product known in France as "agglutinoïl," the exact composition of which I am unable to give, but it contains principally glutin or gliadine.

As to quantities used, it is only possible to ascertain that a foundry of average capacity in this country would use from 1 to 1½ tons of core oil, or the substances above given, the average proportion used being 3½ pounds of fixative to 100 pounds of sand.

[From Consul General Frank D. Hill, Frankfort on the Main, Germany.]

**Large German Consumption of Linseed Oil in Foundries.**

Foundries here use ordinary oils in conjunction with sand in making cores for coarser castings. For fine work, however, best linseed oil is used. It is impossible to give any figures relative to amount of oil consumed by foundries, although this office is advised that consumption of linseed oil is very large.

Linseed oil used here by foundries comes largely from Holland and is bought by foundries from local importers. According to official customs statistics, Germany imported, in 1911, 2,865 tons of linseed oil, valued at \$456,000, of which 2,420 tons came from Holland and the balance chiefly from Great Britain.

[From Consul George Eugene Eager, Barmer, Germany.]

**Compound Used by Large German Concern.**

Nearly all of the largest iron and steel works of Germany are located in this consular district. In answer to an inquiry as to what proportion of core oil was used at its foundry, one of the largest firms states:

For each ton of sand 10 liters (liter = 1.05 quarts), of celin and one-half kilo (1.1 pounds) of leinol are used.

Dusseldorf and Dortmund, in Westphalia, are the centers for supplies in the mining and steel industries of this section, and there would probably be a good market for American foundry oils providing they are better in quality, cheaper, or have any special improvement over other oils for the same purpose.

[Lists of these iron and steel works as well as importers of foundry oil in Germany and other countries may be had from the Bureau of Manufactures at Washington.]

[From Consul Alfred W. Donegan, Magdeburg, Germany.]

Regarding foundry or core oil, no special brand of prepared oil is apparently used by the foundries in this part of Germany in conjunction with sand in the manufacture of cores. Mixtures are generally made by each foundry to suit its individual purposes.

One local German concern, employing about 1,200 men and making hollow castings for use in its regular product, uses a mixture containing, among other ingredients, beet sugar, molasses, linseed oil, and soya-bean oil. The mixture is made at the works, at a cost of about 50 cents per gallon. An average of about 60 gallons per day is consumed.

### COTTON PRODUCTION IN EAST AFRICA.

[Compiled from press report by Consul Alexander W. Weddell, Zanzibar.]

The production of cotton in both German and British East Africa is increasing rapidly, and the outlook for the future continues to be decidedly encouraging. In the British colony the value of the cotton exported during the calendar year 1911 amounted to \$1,335,708, as compared with \$927,348 the previous year. The figures of production in German East Africa are even more encouraging. The table below follows a review of cotton production recently given out by the local representative of the Colonial Agricultural Committee.

District.	Year ending Sept. 30, 1910.	Year ending Sept. 30, 1911.	District.	Year ending Sept. 30, 1910.	Year ending Sept. 30, 1911.
	<i>Pounds.</i>	<i>Pounds.</i>		<i>Pounds.</i>	<i>Pounds.</i>
Tanga.....	154,427	234,150	Mikindani.....	431	11,719
Sudani.....	161,255	248,120	Moschi.....	39,006	80,411
Bagamoyo.....	308	302	Muansa.....	89,542	224,678
Bar-es-Salaam.....	283,069	537,697	Bukoba.....	1,021	1,235
Kilwa.....	209,013	491,536			
Lindi.....	128,960	144,103	Total.....	1,064,022	1,973,966

The figures for 1911, it will be seen, represent an increase of 909,944 pounds, or 84.5 per cent. It is estimated that the crop for this season will be 5,000 to 5,500 bales of 500 pounds each.

### ANOTHER PERUVIAN VESSEL.

[From Consul General W. Henry Robertson, Callao.]

Referring to previous reports on the arrivals here of the new steamships *Mantaro*, *Urubamba*, and *Pachitea*, of the Compañía Peruana de Vapores y Dique del Callao, the recent arrival at Callao of the company's new steamship *Huallaga* is noted. It was constructed at Rouen, France, and is destined for fast-mail, passenger, and cargo service between Peruvian ports and Panama. It has a gross displacement of 2,495 registered tons, its speed is 16 knots an hour, and it possesses all of the characteristics and appearance of its sister steamships.

### AMERICAN LINE TO THE LEVANT.

[Constantinople dispatch in New York Times.]

The American Levant Line has been organized here to carry on a direct passenger and freight service between America, Egypt, and the Black Sea. It will have a fleet of four steamers, the first of which will sail in July.

### THE JERKED-BEEF INDUSTRY IN URUGUAY.

[From Consul Frederic W. Gading, Montevideo, supplementing reports published June 27, 1911, and Mar. 16, 1912.]

The tasajo exported from Montevideo to Cuba during the past four years aggregated in United States gold \$1,499,953 in 1908, \$1,588,175 in 1909, \$860,864 in 1910, and \$1,939,370 in 1911. The exports during the first quarter of 1912 exceeded by 1,634 tons and by \$478,609 those for the corresponding period of 1911, the prices in January being \$99.53 per ton and in December, 1911, \$169.42 per ton. This shows not only a distinct increase in the quantity of tasajo shipped from Montevideo to Cuba, but a considerable advance in values as well, the data being supplied by the Cuban consul in Montevideo.

While an improvement in the tasajo business with Cuba is evident, with Brazil the reverse obtains, due principally to the large increase in customs duty imposed by Brazil on that product in 1905. This has caused a general exodus of the saladeros; in 1897 there were 25 operating in Argentina, there are now 2; until three years ago there were 28 in operation in Uruguay, now there are 5, while to-day Rio Grande, Brazil, has 42. The cost of production of tasajo in Brazil is \$108.10 per ton, in Uruguay it is \$72.75 per ton. It seems strange that while Uruguayan tasajo has formed 70 per cent of the Brazilians' food, it is not used in Uruguay.

#### Importance of Local Meat Industries.

Of the cattle killed in this region during the last five years 42.73 per cent was utilized in the local industries, of which 82.91 per cent was made into tasajo and 17.09 per cent conserved, as shown in the following table:

Years.	Total number killed.	Uruguay.	
		Tasajo.	Conserved.
1906-7.....	1,609,800	742,000	182,500
1907-8.....	1,426,800	661,800	28,200
1908-9.....	1,664,000	480,200	106,800
1909-10.....	1,881,000	584,000	176,200
1910-11.....	1,651,200	491,000	107,000

A serious feature now threatening the industry is the increase in the number of cows slaughtered, greatly diminishing the breeding capacity of the herds.

#### Suggested Remedial Measures.

One thoroughly familiar with the industry in all its branches recommends the following as a means of preserving it:

1. Organize a saladero union in Uruguay on a proper basis.
2. Abolish the consigning of products.
3. Improve the quality of the meat.
4. Permanent deposits should be established in foreign markets.
5. Such deposits to be in charge of active, responsible men.
6. Make no direct sales to intermediate markets.
7. The main deposit in Brazil should be located in Rio Janeiro, under which all other deposits should be operated, subdeposits to supply markets near at hand.

Various influences are operating to destroy this industry in Uruguay, some of which have been indicated. Another is the indirect manner of selling, one manufacturer stating he had been in the business more than 25 years, yet had never known anything of his consignees

other than their signatures. Uruguay supplies the raw materials which are elaborated on the frontier and sent inland by rail, as it is cheaper than by sea, escaping the duties which would double the prices if shipped via Montevideo.

### SUBSTITUTES FOR COAL IN UNITED KINGDOM.

[From Consul General John L. Griffiths, London.]

Since the British coal strike in the early part of this year many of the large users of coal, including the railways, steamship companies, and municipal corporations have been considering more seriously than ever before the adoption of a substitute fuel. There has been an unprecedented demand for oil engines to replace or supplement steam engines. It is stated that the British towns of Barking, Reigate, Leatherhead, Fareham, Bude, Letchworth, Aldershot, Cosham, Chichester, Aberystwyth, Birmingham, Bath, Swadlincote, St. Albans, Leek, Hindhead, Rothesay, Oxford, Wakefield, Saltburn, Sheerness, Guildford, Bangor, Bridgewater, and Liverpool will soon be partially or wholly independent of coal for their electrical supply.

Many municipal waterworks are also being made independent of coal and steam power. It is claimed by motor makers that many English firms are, as a result of the late strike, seriously considering the advantages of motor transport. Commercial travelers are using motor cycles in increasing numbers when calling upon their customers, as they can travel, it is stated, a hundred miles upon a gallon of petrol (gasoline) and carry their samples, unless they are of great bulk, be entirely independent of the railways, and be able to call upon a greater number of people than they possibly could if restricted to steam travel.

### SODA, LIME, AND SULPHUR OF MEXICO.

[From Vice Consul General Claude E. Guyant, Mexico City.]

Information is sought concerning the lime, sulphate of soda, and sulphur deposits in Mexico. I have been able to get information of but one deposit of sulphate of soda, which is in Salinas de El Lucero, district of Bravos, State of Chihuahua.

The mountain chain running along the eastern part of Mexico is, to a greater or less extent, composed of limestone rock, but the purest deposits are in the State of Hidalgo. There are lime works at Apasco, at Tula, and at Toltéca, all in the State of Hidalgo.

The sulphur mines of Mexico were described in Daily Consular and Trade Reports for January 23, 1912. A list of the sulphur deposits in the Republic has been secured from the Geological Institute of Mexico [copy of which may be secured from the Bureau of Manufactures at Washington].

### CANADIAN STEEL-MAKING ENTERPRISE.

[Press dispatch from Toronto.]

In order to overcome losses incidental to the termination of the Government bounties, the Dominion Steel Co. has expended a large amount in equipping wire-nail, bolt, and nut mills, which will transform the output from the wire-rod mill into products which enjoy protection under the tariff. This substitution of protected products for unprotected wire rods promises greatly to increase the company's profits henceforth.

**VENEZUELAN INDUSTRIAL NOTES.**

[From Consul Thomas W. Voetter, La Guaira.]

**Concessions for Sugar Central, Gypsum Factory, and Electric Plant.**

Various Venezuelan concessions for establishing sugar centrals have been transferred, with Government approval, to Pedro José Rojas, of Maracaibo. It is planned to manufacture refined sugar, and the concessions provide for exemption from customs duty on all machinery, etc., for equipment.

A contract has been signed between Eusebio Chellini, of Caracas, and the Minister of Fomento, for establishing a factory for making calcined gypsum or plaster of Paris. Señor Chellini is to have exclusive right to operate a factory in the Federal District for 5 years, with 3 years' extension; to import free of duty the machinery, viz, ovens, triturating mill, grinding mill, wire-screen cloth, a bolter with its pulleys and belts, and iron for roof. Señor Chellini agrees to use only native rock and to sell plaster to the Government at 12 per cent reduction. The contract is to be in force after approval by the National Congress, and the factory should be in operation within a year thereafter.

The Government has conceded to the *Compañía Anónima Generadora de Fuerza y Luz Eléctrica*, the corporation interested in the hydroelectric plant at Mamo, now being installed under the direction of J. G. White & Co. (Ltd.), exemption from customs duties on machinery, piping, tools, and other materials necessary for completing the plant and installing the service in Caracas, La Guaira, Macuto, and Maiquetia.

**Automobile and Railway Enterprise.**

A 30-year exclusive contract has been signed between the Government and Norberto Borges which provides, upon congressional approval, for automobile service over an extensive territory—from Valencia, passing through Tocuyito, Tinaquillo, Tinaco, San Carlos, Acarigua, Ospino, and Guanare, to Barinas, with a branch from Acarigua to Barquisimeto. The enterprise may establish auxiliary services in States of Cojedes, Portuguesa, and Zamora, after securing Government consent. The concessionaire also will have preference for five years, over others, terms being equal, to any concession which may be granted for constructing a railroad over same territory. Exemption from customs duties is granted on all materials, tools, etc., needed for installing and operating the service and for its conservation, during the life of the contract. The first section, Valencia to San Carlos, must be in operation within 1 year after commencing work, the second section, San Carlos to Acarigua and Barquisimeto, within 2 years, and the third, Acarigua to Barinas, within 3 years. No taxes are to be imposed, except the instruction stamps. Persons familiar with the country state that the section to be covered by this automobile service is rich and productive, that enough traffic can be found to make a railroad profitable, and that its construction would not be exceptionally expensive.

**Navigation Decree—Sailings Resumed.**

A Venezuelan decree provides that the regulations for prevention of collisions at sea to be observed by Venezuelan vessels shall be those agreed upon at the International Maritime Conference of Washington,

of October 16, 1889, with latest modification of certain international rules, initiated by Great Britain.

The Royal Mail Steam Packet has resumed biweekly service between La Guaira and Port of Spain, Trinidad, suspended upon the recent development of some few cases of bubonic plague in Trinidad. The new vessels *Balantia* and *Berbice* are assigned to this service, and stops are made at Pampatar and Carupano, between La Guaira and Port of Spain, at which latter port connection is made with the company's steamers between New York and Southampton, via Colon.

**Thornless Cactus—Chicle-Gum Enterprise.**

The Ministry of Fomento has ordered some thornless cactus plants from Los Angeles, Cal., to ascertain if their cultivation will be successful in arid regions of Venezuela.

The Minister of Fomento gives to José Patrocinio Cuéllar, of Caracas, the exclusive 10-year privilege to establish one or more plants for extracting chicle, an industry not now exploited in the country. He is under the obligation to do all in his power to extend the planting and cultivation of the trees which produce this gum. If for one year he ceases to operate actively under this concession it lapses to the Government and he will be obliged to make public the processes he employs to manufacture chicle. The contract will be in force from the time it is approved by the National Congress. American manufacturers of chewing gum who desire to secure chicle from Venezuela should correspond with Señor Cuéllar.

**Plans for Improvement and Development.**

The President of Venezuela announces to Congress that during the present year the foreign debts covered by the protocols of Washington of 1903 will be completely paid. He suggests that the 30 per cent surcharge on the customs duties collected at Puerto Cabello and La Guaira, which has been used to pay the indebtedness mentioned, be still continued and the product of this surcharge be applied to public objects, among which he mentions ways of communication, methodical propaganda of immigration, colonization, establishment of a Federal School of Agriculture, sanitation, and compliance with the obligations coming from the contract with the railroad from Valencia to Puerto Cabello.

The President of Venezuela has directed that an investigation be made of the present state of the national colonies "Independencia" and "Bolívar" in respect to their present population, nationality, sex, age, etc.; areas cultivated, nature of operations, and agronomic conditions; climatic conditions, rainfall, and health; ways of communication and methods of transportation; extent of uncultivated land, uses to which it can be put, and whatever other conditions that can be ascertained. This information will be used to develop these colonies, as a basis for studying the methods which will best conduce to colonization of unoccupied areas of the country. A new colonization law is now before Congress.

---

*The British Empire Trade Commission*, at its first meeting in London in mid-June decided to devote the next six months to inquiry into trade conditions in the United Kingdom with relation to the rest of the Empire, and will leave for Australia in January, 1913.

**NOTES FROM INDIA.**

[From Consul Stuart K. Lupton, Karachi.]

**Figs—Port Loan—Barley.**

Cuttings of Smyrna and English hothouse figs have recently been received at Karachi for use in experimental cultivation.

The Karachi Port Trust has applied to the Government for sanction to raise a loan in India during 1912 of 3,000,000 rupees (\$973,000).

Consignments of Indian barley to the English markets last year were found excellent and were taken up and used in a number of breweries. Subsequent supplies are, however, said to have been not so good, but British brewers are of opinion that with proper care Indian barley should command a good price.

**Indo-Persian Railway—Foreign Trade.**

The survey which is being conducted on the Mekran section of the projected Indo-Persian Railway has resulted in the discovery of a practicable route from Karachi to Gwadar. No gradient is steeper than 1 in 90, while as a rule a gradient of 1 in 250 can be had. The road runs inland at times, but not to any marked extent. The distance from Karachi to Gwadar as thus aligned is about 450 miles. Alternative routes have been carefully located and their respective merits marked.

A report of the Indian Customs Department gives the following comparison of the commerce of India for the last three fiscal years ending March 31: Total imports—1910, \$519,606,858; 1911, \$562,766,909; 1912, \$640,973,106; and the total exports \$630,527,286, \$704,851,546, and \$772,602,688 for the same years, respectively. The dues collected advanced from \$3,394,421 in 1910, to \$4,245,583 in 1911 and \$4,418,395 in 1912. The trade of Sind for the same three years was: Imports—\$35,036,641, \$41,017,225, and \$46,130,144; exports—\$72,673,182, \$73,008,971, and \$80,620,778.

[From Consul Edwin S. Cunningham, Bombay.]

**Bombay Cotton Statistics.**

The cotton season is supposed to begin in Bombay on October 1, and on that date in 1911 there was estimated to be 300,000 bales of cotton of 400 pounds each in Bombay. Since then 2,188,000 bales were received up to May 16, 1912.

The feature of the exports of cotton from Bombay during the year has been the greatly increased trade with Japan and China. Already there has been a demand in Japan alone for 736,339 bales, or 292,810 bales in excess of the requirements for last year on the same date.

The stock in the hands of mills, dealers, and exporters on May 16 was estimated to be 700,000 bales.

**Engine Imports.**

The demand for small engines for irrigation purposes, and for working in sawmills, printing establishments, corn mills, sugar-cane crushing mills, rice mills, small foundries, and other small factories, is on the increase, and for agricultural purposes a growing interest is being aroused. The engine which is most desirable seems to be the oil engine from 3 horsepower up.

The imports of various kinds of engines into Bombay during the fiscal year 1910-11 were: Steam engines and parts, excluding loco-

motives for railways, \$1,040,760; electrical engines, \$364,500; textile engines (not steam), \$2,482,778; other engines (not steam), \$1,811,038; total, \$5,699,076.

#### **Manufacturing Plants.**

From the Annual Factory Report for the Presidency of Bombay it is seen that the establishments coming under the control of the factory act increased from 555 in 1909 to 577 in 1910. The additional 22 were distributed over a great variety of lines. The number of working factories was 545 as against 520 the previous year, 269 being perennial and 276 seasonal; 421 of the total were connected with cotton manufacture, and those not working were almost entirely connected with this industry. The total number of persons employed in the manufacturing plants of the Presidency was 230,957. Of these, 184,051 were engaged in the cotton industry alone.

The employment of women and children in factories is of considerable importance; 43,401 women and 10,816 children were so engaged in 1910. An analysis of the statistics shows that during the last five years the number of women employed in the city of Bombay has gradually decreased, being 25,093 in 1906 and 22,288 in 1910, while in the country districts there has been a gradual increase—19,617 in 1906 against 21,113 in 1910. On the other hand the employment of children in the city of Bombay has been growing from 2,741 in 1906 to 3,942 in 1910. In the country in the former year 5,918 children were employed, and in the latter 6,874.

(From Consul José de Olivares, Madras.)

#### **January Trade Record—Rubber Output.**

January, 1912, was a banner month in the commercial annals of the Madras Presidency. The aggregate oversea trade for that brief period, as shown by the customs returns, amounted to \$10,216,663, as compared with \$7,828,309 in the month of December, 1911. Of the total January commerce \$6,320,095 represented exports and \$3,896,568 imports.

The annual reports of three South Indian concerns—the Travancore, Orkaden River, and Paloor rubber companies, which are all under the same management—show that these interests had the following acreages planted with Para rubber: Travancore, 1,038.78; Orkaden River, 734.3; Paloor, 399. The Travancore Rubber Co. harvested 29,600 pounds of rubber last year; the Orkaden River Co., 4,465 pounds; and the Paloor, nil. The estimates for this year are: Travancore, 67,000 pounds; Orkaden River, 10,000 pounds; Paloor, 6,000 to 7,000 pounds. Particulars of the crops of the Stagbrook Rubber & Tea Estates, which have 1,022 acres in rubber and 825 acres in tea, give the following rubber output: In 1910, 10,501 pounds; 1911, 30,000 pounds; 1912 (estimated), 62,000 pounds.

The Rani Rubber Co. (Ltd.) harvested 193,750 pounds of rubber last year as compared with 41,983 pounds in 1910; the estimate for the current year is 325,000 pounds of rubber. The company harvested 14,728 pounds in April as compared with 4,475 pounds in April, 1911; and the total for the first four months of this year is 25,110 pounds in contrast to 4,629 pounds in the same period in 1911. This organization has 3,054 acres planted with Para rubber.

## FOREIGN TRADE OPPORTUNITIES.

(Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.)

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 9063. Machinery and material for oil company.**—An American consul reports that a company was recently incorporated in his district, with a capital of \$5,000,000 to develop the shales. Operations will begin at once, and a reduction plant will be constructed at an estimated cost of \$2,000,000. The shales of the region in question are said to be very rich in petroleum and sulphate or ammonia. The charter of the company gives it the right to construct and operate railroads, acquire property, and many other powers. Manufacturers of machinery and material that would be used in such a plant might do well to get in touch with this company at the earliest moment.
- No. 9064. Railway materials for Siamese State railways.**—The Siamese Legation has furnished copy of specifications, plans, forms of tender, etc., of permanent way material for the Northern Line of State Railways for distribution among such American firms as may care to bid on these supplies. Tenders will be received until July 15, 1912.
- No. 9065. Cast-iron pipe with connections, etc.**—An American consular officer in a European country reports that certain railways in his district are in the market for 2,200 yards of cast-iron pipe with connections, etc. Specifications can be obtained by writing in English to a person named in the report.
- No. 9066. Street sprinklers and street-cleaning devices.**—A contract is about to be signed between a foreign municipality and a company for paving the principal streets of the city. The company also undertakes to keep the streets along which its lines run in good condition. An American consular officer writes that manufacturers of car sprinklers and street-cleaning devices should get in touch with this firm.
- No. 9067. Cotton gins.**—A business man in a Latin-American country informs an American consular officer that he desires prices and catalogues upon a small roller gin for sea-island cotton. He says that his experiments tend to prove that such cotton can be successfully produced in the country in question, and there would probably be a demand for more gins at an early date.
- No. 9068. Can-lacquering machines.**—A report from an American consular officer in the United Kingdom states that a firm in his district has expressed a desire to hear from American manufacturers of can-lacquering machines. Correspondence should be addressed direct to the firm.
- No. 9069. Castile soap.**—An exporter of castile soap in Greece desires to enter into direct communication with importers of this article in cities along the Atlantic seacoast.
- No. 9070. Maize crushers.**—According to information received by an American consular officer, there is at present a great demand in a certain foreign country for maize (corn) crushers. There is at present only one manufacturer of maize crushers in the country in question. A list of firms interested in the sale of this machinery accompanied the report and can be obtained from the Bureau of Manufactures.
- No. 9071. Mineral propositions and timber.**—An American consular officer in Russia has forwarded a communication received from a resident of that country containing a description of a number of mineral propositions which are offered to American investors. Iron works, coal mines, and timber are also offered for sale. Copy of the complete report can be obtained by interested persons from the Bureau of Manufactures.
- No. 9072. Funds for public improvements.**—The mayor of a foreign city has written to an American consular officer that he would like to be placed in communication with American capitalists who might be likely to be interested in financing the city to the extent of \$250,000 for public improvements. Copy of the communication, containing further details, will be sent to interested firms upon application. It is proposed to establish a number of municipal enterprises, and it is thought this proposition might interest contractors or manufacturers of municipal supplies.

## PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

- No. 704. Post-office construction.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until July 15, 1912, for the construction (including plumbing, gas piping, heating apparatus, electric conduits and wiring, and interior lighting fixtures) of the United States post office at Fairmont, W. Va. The building is to be one-story and basement, approximately 7,920 square feet ground area, brick faced with stone trimming, and tin roof. Copies of the drawings and specification may be obtained from the office of the custodian of the site at Fairmont or of the Supervising Architect.
- No. 705. Panama Canal supplies.**—Sealed proposals, in triplicate, will be received at the office of the General Purchasing Officer of the Isthmian Canal Commission, Washington, D. C., until July 8, 1912, for furnishing auxiliary electrical equipment for the Gatun hydroelectric station, being switchboards, switching group, transformers, battery, air compressor, and crane equipment. (Circular No. 715.)
- No. 706. Commandant's and officers' quarters.**—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until August 3, 1912, for commandant's quarters and five officers' quarters at the naval station, Pearl Harbor, Hawaii. Plans and specifications can be obtained upon application to the bureau, or to the Commandant of the Naval Station, Honolulu, or to the Commandant of the Navy Yard, Mare Island, Cal.
- No. 707. Levee construction.**—Sealed proposals for constructing about 1,000,000 cubic yards of levee in the White River levee district will be received at the Mississippi River Commission, First and Second Districts, United States Engineer Office, Customhouse, Memphis, Tenn., until July 1, 1912. Information upon application to Clarke S. Smith, Major, Engineers.
- No. 708. Machines for facing and stacking mail.**—Sealed proposals for furnishing approximately 20 machines for facing and automatically stacking mail during the fiscal year ending June 30, 1913, will be received at the office of the purchasing agent, Post Office Department, Washington, D. C., until July 11, 1912. Prices should be quoted f. o. b. cars at the factory. Copy of the specifications can be obtained by addressing the Purchasing Agent, Post Office Department.
- No. 709. Building operations.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until July 16, 1912, for the extension, remodeling, etc. (including plumbing, gas piping, heating apparatus, electric conduits, wiring system, and lighting fixtures) of the United States appraiser's stores, Galveston, Tex. The work comprises a one-story extension of about 2,130 square feet area, a three-story extension of about 2,160 square feet area, and a third story on the present building which has an area of about 6,850 square feet. The extension to be brick faced, with sheet-metal cornices, composition roof, nonfireproof construction. Drawings and specifications may be obtained from the custodian at Galveston, Tex., or at the office of the Supervising Architect.
- No. 710. Replacing roof of storehouse and magazine.**—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until July 13, 1912, for replacing roofing of storehouse and magazine No. 7 at the naval magazine, Fort Mifflin, Pa. Plans and specifications can be obtained on application to the bureau or to the Commandant of the Navy Yard, Philadelphia, Pa.
- No. 711. Steel oil-storage tanks.**—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until July 13, 1912, for two steel oil-storage tanks at the naval station, Pearl Harbor, Hawaii. Plans and specifications can be obtained on application to the bureau or to the Commandant of the Naval Station, Honolulu, Hawaii.

Consul Charles K. Moser, of Colombo, states that there are now 1,000 automobile owners in Ceylon. The Automobile Club, Harold North, secretary, care Queen's Hotel, Kandy, is a large and wealthy organization.

Google

**EXHIBITION OF PACKING MATERIAL.**

[From Consul Louis Goldschmidt, Nantes, France.]

Taking advantage of the four central agricultural meetings which are to be held in 1912 at Bourges, Limoges, Libourne, and Poitiers, the Paris-Orleans Railway Co. has decided to arrange a large exhibition of packing material. Manufacturers of such products are invited to submit their articles for packing poultry, meat, fruit, vegetables, butter, and eggs for transportation.

All exhibited articles must conspicuously show the name and address of the manufacturer, which will thus advertise them. Suggestions are invited with a view to finding the most suitable method of packing provisions for transportation. Such packing devices must be secure, practical, cheap, and procurable in large quantities so as to permit their popular use. Especially desired are packages which assure the security of contents. Prizes will be given to the best models exhibited.

All particulars will be furnished by Monsieur Touzet, Inspecteur Principal des Services Commerciaux, Gare de Cahors, Cahors (Lot). The railway company offers to transport free of charge all articles for exhibition on condition that they will become the property of the company if found valuable and practical, in order to make them known.

It appears that this would be an excellent opportunity for the exhibition and introduction of American goods of this class, particularly receptacles for fruits, berries, vegetables, etc. Some of the methods used in the United States for packing fruits and berries are practically unknown here, particularly such as are used for berries and grapes. Berries are not transported here to any great distance, particularly, I suppose, owing to their being retailed in very shallow flat baskets, which expose the contents to crushing. Grapes are shipped from the south in small boxes containing about 5 to 10 pounds.

If American manufacturers of devices for making wood baskets, crates, etc., exhibited their machines, a market therefor might be found here. It would require intelligent display and a certain outlay for expenses.

---

**International Decorative Exposition Postponed.**

Ambassador Myron T. Herrick, of Paris, has been officially informed that the commission in charge of the International Exposition of Modern Decorative Art, which was to have been held in Paris during 1915, has decided to postpone this exposition for a year in order to avoid its coinciding with the Panama-Pacific Exposition at San Francisco.

---

**Form of Sports in Southern Arabia.**

Consul Walter H. Schulz reports no motor boats at Aden, Arabia, due principally to the small number of Europeans. A few go in for boating. Rich Parsee merchants may eventually take up this form of sport, but that they will not do so for many years to come seems certain. They seem content with games of cricket and tennis for the present.

## MARKET FOR AMERICAN GLASSWARE.

[From Vice Consul Charles F. Baker, Valparaiso, Chile.]

There is a growing demand for American glassware in Chile, in spite of the large per cent of breakage due to improper packing and rough handling. In fact, it seems as if the United States would soon be able to control the Chilean market in this line, if only the goods can be delivered in better condition, the slightly higher freight rates from Europe notwithstanding.

Hundreds of barrels of American glassware have been examined during the past two or three years by this consulate, and I am persuaded that with greater care and a small additional expense the trouble can, in a large measure, be overcome. The barrels, the average size of which is about 28 by 36 inches, now in use by many American exporters, are considered very convenient cases. They are about the right shape and size for handling and the weight is apparently reduced to a minimum.

### Suggested Changes in Packing.

But the cases must be made stronger without adding materially to the weight. This end can be attained by placing, as do some of the German and the Chinese shippers, a center head or partition in the middle of the barrel. This partition should be thoroughly secured on both sides to prevent shifting in case the barrel is packed more heavily in one end than the other. There should then be two extra wooden hoops placed nearer toward the center of the barrel, one on each side of the bulge, and especially when the barrel is more than 30 inches high. The extra hoops should be of wood, because the iron and heavy wire seem to work loose, thus adding weight to the case without serving any purpose. In this way we strengthen the bulge where much of the strain comes.

The selection of the fibers for the inside packing is a matter of prime importance. Generally these materials should be very tough and free from chaff, which has a tendency to trickle down to the sides

and ends of the case; leaving the pieces in contact. Very good results have been obtained by the use of prairie hay, swamp grass, excelsior, and well-selected oat straw. The material should be slightly dampened before use to secure compactness. Every case should be tightly packed so as to avoid any possibility of shifting. It often happens that cases arrive so loosely packed that by simply shaking them one can hear the glass rattle.

In packing this class of goods for export to this coast each piece should have special attention. It is well understood that American manufacturers are always rushed and that their establishments are very extensive and detail is a matter that is difficult to govern, but it is useless to attempt to compete in these lines unless more attention is given to these seemingly minor points that mean so much to the trade here. Tumblers must not be placed one in the other with simply a thin paper between, but they must be wrapped with sufficiently heavy material to prevent contact. Cake stands, glass platters, large flower vases, etc., should be carefully and heavily wrapped separately and in such a manner that if one should break the pieces would be retained in its own cover and not be allowed to shake about, causing damage to other pieces that might otherwise arrive in good condition.

**Importer Willing to Pay Extra Expense.**

American manufacturers will find that in most cases the importers along the west coast of South America will gladly meet any extraordinary expense incurred in these extra precautions. In fact, they often write the manufacturer to that effect.

It must be remembered that the two markets are a long way apart and that orders can not be duplicated in a few days nor even a few weeks. It is a question of six months practically. And any mis-carriage means loss and disappointment to the importer as well as to the exporter, and business with the United States is discouraged to that extent.

---

**GROWING AMERICAN EXPORTS OF GLASSWARE.**

The glassware export statistics of the United States are divided into three classifications, "cylinder, crown, and common window glass," "plate glass," and "all other." The aggregate shipments abroad of the first two classifications up to the year 1911 had remained at such low, almost stationary, amounts that the Bureau of Statistics decided to no longer continue this separate grouping. Beginning with 1911, however, American manufacturers of glassware vigorously sought foreign trade, with the consequence that exports increased in the fiscal year 1911 by nearly half a million dollars over 1910. The Bureau of Statistics, therefore, which had consolidated the classifications of glassware exports for the first half of the fiscal year 1911, found it necessary to renew the separate exhibits; hence the two first-named tables comprise—in the 1911 column—only exports for the six months, January to June, inclusive. As will be seen, the sales of these American glassware goods for that half year were almost double those for the entire 12 months of the fiscal year 1910. Export statistics for glassware to the countries in the Western Hemisphere and total to all countries during the past five fiscal years ended June 30 have been as follows:

<sup>1</sup> The 1911 column includes the exports for the six months July 1 to Dec. 30, 1910, of "cylinder, crown, and common window glass," and of "plate glass."

During the past several years Daily Consular and Trade Reports have contained frequent foreign trade opportunity inquiries for American glassware, likewise many reviews of the glassware trade abroad. These have elicited much interest from glass makers in the United States, and the Bureau of Manufactures has received letters from them indicating an intention of taking advantage of the openings.

## HAWAIIAN PLANTATIONS PAY MORE FOR GOVERNMENT LEASES.

[From Honolulu Bulletin.]

Government land held under lease by plantations is showing a rapid increase in value, and members of the land board believe that thousands of dollars extra will be turned in to the Government in the form of rentals from now on.

What is likely to prove an important precedent in establishing the price to be paid for Government leases is the figure agreed upon recently by the land board and Honolulu Plantation for land at Eiea. Some 200 acres were leased at \$15 an acre. This is in marked contrast to the \$3 and \$4 and \$5 an acre at which lands have been held in many instances.

Of direct bearing on the future rentals that the land board will feel justified in asking was a statement made before the board that Y. Ahin, a Chinese farmer, pays \$40 a year per acre for the Palama cane fields that were formerly rice patches, and that he is clearing \$60 an acre each year. It was stated and noted by the board that in two years this Chinese has cleared \$19,000.

**GRAPHITE INDUSTRY AND TRADE.**

[From Consul General Robert P. Skinner, Hamburg, Germany.]

The total importation of crude, ground, and scoured graphite into Germany amounts to upward of 32,000 tons per annum, practically all of the business from over-sea countries being concentrated at Hamburg. While the imports from the United States are rather limited in quantity, there is no reason why much more business should not be done if American exporters are able to meet German terms and requirements.

It is exceedingly difficult to submit any satisfactory information in regard to prices, as the variations are considerable in the value of the different qualities. Hamburg firms consulted are all willing to receive American samples, and would then be in position to submit definite propositions. On March 16 powdered amorphous graphite was worth \$2.38 to \$7.14 per 220.46 pounds, and graphite in flakes; both crystals and powdered crystals, \$7.14 to \$28.56. Exporters of graphite to the United States quote good marketable qualities at 1½ to 2½ cents per English pound c. i. f. Baltimore, shipment in bags. When graphite is packed in casks, the weight per cask is 440 pounds. The highest grade of graphite handled in Hamburg is received from Ceylon.

**Imports and Exports.**

The most recent statistics for Germany relating to the foreign trade in crude, ground, and scoured graphite are as follows:

Imports and exports.	1910	1911
	<i>Metric tons.</i>	<i>Metric tons.</i>
Total imports.....	30,733.0	32,912.0
Whereof from—		
Italy.....	3,323.4	3,247.8
Austria-Hungary.....	16,003.3	17,627.8
Ceylon.....	8,502.5	9,542.5
Japan.....	580.9	673.4
United States.....	497.5	709.7
Total exports.....	2,441.6	3,821.8
Whereof to—		
Great Britain.....	681.3	1,328.6
Austria-Hungary.....	705.0	630.7

According to the statistics of the State of Hamburg, which vary somewhat from those of the Imperial Government, there were 532.2 tons of American graphite imported at Hamburg in 1910, the average price per ton being \$135.66. Figures for 1911 are not yet available. [The addresses of four Hamburg importers of graphite may be secured from the Bureau of Manufactures.]

[From Consul Robert Frazer, jr., Valencia, Spain.]

**Valencia's Purchases Made Through Traveling Salesmen.**

Graphite crucibles and pulverized plumbago are used by the several small bronze and steel foundries in operation in the Valencia district, but only on a retail scale. Purchases are effected almost exclusively through traveling representatives of English or German exporters who pay periodic visits and call personally on all consumers to book orders, which, although individually small, in the aggregate appear to be of sufficient importance to warrant the expense of traveling salesmen. These travelers, however, do not offer graphite

products alone, but generally carry also belting, greases, and miscellaneous supplies and machinery. Their headquarters are usually at Barcelona, but some come direct from England and Germany.

The plumbago imported in barrels by steel and other metal foundries has of late usually come from Germany and appears to be relatively cheap, as it is sold wholesale at the equivalent of 3½ cents per pound. There are no local wholesale dealers or jobbers handling graphite products.

**Tariff--No Native Supply.**

In the absence of a special traveling representative to look after their interests in this country and an adequate stock of specialties always on hand here or at Barcelona, American graphite manufacturers would probably meet with more success in introducing their products by interesting one of the important distributing agencies and commission houses established at Barcelona handling general machinery and machinery and workshop supplies, belting, lubricants, etc., which have traveling salesmen visiting all Spain.

The Spanish tariff on plumbago is only about 4 cents per 100 kilos (220.46 pounds). There is no native source of graphite in operation in this country at present and all consumed here is imported. [A list of Valencia users of graphite, plumbago, and graphite crucibles is obtainable from the Bureau of Manufactures.]

[From Geological Survey announcement; see also Daily Consular and Trade Reports for Dec. 9, 1910, and Aug. 23, 1911.]

**Production in the United States.**

The production of natural graphite in the United States is sporadic, because the milling of disseminated flake graphite is still in the experimental stage and the product is of uneven grade. Because of this unreliability of the domestic supply most of the large consumers prefer to depend on imported material.

In 1911 the quantity of graphite imported into the United States for consumption was 20,702 short tons, valued at \$1,495,729. In contrast to this the total domestic production was 3,618 short tons of natural graphite, valued at \$288,465, and 5,072 short tons of manufactured graphite, valued at \$664,000.

The cause of the unsatisfactory condition of the domestic industry is found in (1) the superiority of much of the Ceylon graphite to any that is mined in this country; (2) the low cost of labor in Ceylon, which permits cheap mining, careful sorting, rubbing up, and blending of the product; (3) the facts that the largest domestic deposits are schists which carry small flakes of graphite disseminated through them, and that the separation of the graphite from the accompanying minerals, especially mica, in such rocks is a problem of unusual difficulty. The one American concern which can be said to have become firmly established in the treatment of such graphite rocks possesses important advantage over other companies in that it manufactures much of its product into graphite paints, graphite grease, etc.

The largest part of the foreign graphite that comes into this country is brought in by American firms which either control or own the foreign mines or have purchasing agents abroad and are therefore in position to take immediate advantage of any change in the markets at home or abroad.

**Ceylon's Graphite Deposits.**

The graphite deposits of Ceylon are of especial interest to Americans, because most of the graphite used in this country comes from that island and because the United States has for years been the largest consumer of the Ceylon material. Much has been printed in regard to these deposits, but it is widely scattered through publications which are not readily accessible to the American public. The writer has, therefore, summarized the more important facts which are on record.

Although their existence was long known and mentioned in print as early as 1681, the graphite deposits of Ceylon were not exploited until some time between 1820 and 1830. Joseph Dixon is said to have imported a small quantity into the United States in 1829, but it was not until 1834 that the industry assumed any commercial importance. From that time to this, as a result of the growth of metallurgical industries and

the resulting demand for refractory materials, the industry has developed rapidly, until at present graphite is subordinate in value only to tea and the products of the coconut palm among the exports from Ceylon.

Up to 1901 Great Britain consumed more Ceylon graphite than any other country. Since 1901 the United States has assumed first place, with Great Britain second until 1909, when Germany took second place. [Plumbago invoiced at the Colombo consulate for shipment to the United States had a declared value in 1910 of \$1,789,035, and in 1911 of \$1,034,331.—B. of M.] It is interesting to note that an American firm is one of the principal exporters of Ceylon graphite. With the exception of the operations of this firm and of a limited amount of graphite mining done on tea estates, the industry is in the hands of native Cingalese. It has been estimated that the various processes of mining, sorting, "curing," packing, and shipping graphite, as well as making the barrels in which it is exported, provide employment for about 50,000 men, women, and children.

#### **Location of Deposits—Mining Methods.**

The deepest and best graphite mines are near Kurunegala; others are located near Kegalla, about 15 miles to the south, and near Ratnapura, both in the Province of Sabaragamuwa. The graphite is mined either from open pits or through vertical shafts connecting with underground workings. Most of the mines are not deeper than 100 feet, though a few go as deep as 400 or 500 feet. On account of the heavy rainfall water is one of the chief obstacles to deep mining. In a few mines steam pumps and hoists are employed, but as a rule the mining methods are still crude, the acme of mechanical ingenuity being reached in a windlass operated by five or six men for hoisting the graphite in a sort of tub. The workmen usually ascend and descend by means of rough wooden ladders, tied with jungle ropes and rendered exceedingly slippery by the graphite dust and water.

The mineral as it comes from the pits may contain as much as 50 per cent of impurities, mostly in the form of quartz and wall rock. It is conveyed in bags to a dressing shed, where it is picked over and the impurities reduced to 5 or 10 per cent. It is then packed in barrels for transportation to Colombo or Galle. At these ports it is unpacked and submitted to further treatment known as "curing." The graphite merchants have fenced yards or "compounds" for the final preparation of the graphite for the market. In the methods of "curing" there is some diversity, but the first step is usually to set aside the large lumps and to pass the remainder through stationary screens of several different sizes of mesh. The large lumps and the screened pieces are then broken with small hatchets by Cingalese women to remove the coarser impurities, such as quartz, and are then rubbed up by hand on a piece of wet burlap and finally on a piece of screening to give them a polish. Finally, various grades coming from several mines or differing in size or texture are blended to meet the requirements of purchasers, a process requiring skill and long experience.

The poorer material is usually beaten to a powder with wooden mauls or with beaters shaped like a rolling pin, and is then sorted into different grades. In some establishments the impure grades are washed in a tub or pit. In this process the mineral is placed in saucer-shaped baskets and by a circular "panning" motion of the immersed baskets the graphite particles are thrown off into the pit, while the heavier impurities, especially pyrite, remain behind. To separate the very fine material, the powdered graphite is placed in a basket shaped somewhat like a large dustpan. The contents of the basket are thrown into the air, and the heavier particles fall back into the basket, while the finer material is blown forward and falls on the floor.

#### **Korean Graphite Mines.**

The following information in regard to the graphite deposits of Chosen (Korea) is taken from a private report prepared in 1909 and placed at the writer's disposal through the courtesy of Mr. Charles Pettinos:

The existence of large deposits of graphite in Chosen has long been known, but no attempt was made to develop them until within the last few years, the first mention of graphite in the Chosen customs returns being in 1903, although sample shipments had been made before that time. Graphite is known to occur in all the Provinces, but appears to be most abundant in the Province of Kyeng-Sang, which is nearest to Japan, in Chung-Cheng, one of the western Provinces, and in the northern Province of Pyeng-an. Up to June, 1909, 65 mining rights had been granted under the Chosen laws for the mining of graphite and over 40 more were pending.

In 1909 there were five producing mines in Chosen, all operated by Japanese firms. The first of these mines is situated in the northern part of Chung-Cheng Province, not far from Whang-gan station on the Seoul Fu-San Railway, over which the product is shipped to Fu-San. The second mine is not far from the first in the northern part of

the Province of Kyong-Sang. The graphite from this mine is transported by river to another station on the Seoul Fu-San Railway. Both of these mines are controlled by the same company, which employs in them 30 Japanese and 100 Koreans. The other three productive mines are located in close proximity to one another in the northern customs district of Gen-San and employ about 345 Koreans and 32 Japanese. Transport is costly, being effected partly by oxcarts, partly by river boats, and partly by junks to the port of Gen-San. All the deposits mentioned are amorphous graphite. Some of them are said to be of large size and easily mined. The percentage of carbon in the material which has been shipped is stated to vary from 60 to 85. Crystalline graphite is also known to occur in Chosen, and one property in Pyeng-an Province is being investigated.

Most of the Chosen graphite which has gone to Europe or America has been shipped from Japanese ports. It can be laid down at these ports at a cost of \$10 to \$13 per long ton. Considerable quantities of Chosen graphite are now being utilized in the United States, where it comes into competition with the amorphous graphite imported from Mexico. The quantity of Chosen graphite imported into the United States in 1911 was probably in the neighborhood of 2,000 long tons.

### UNIFIED SYSTEM OF GERMAN STENOGRAPHY.

[From Consul Talbot J. Albert, Brunswick.]

The so-called committee of 23 which is to prepare a plan for a unified system of German shorthand writing held a session on April 29 and 30 at the Ministry for Public Instruction in Berlin. The following representatives of the different systems of stenography belong to the committee: Six of the Gabelsberger school, 5 of the Stolze-Schrey, 3 of the school Stolze, 3 of the National Stenography school, 2 of the Stenotachygraphy, and 1 representative each of the Arends, Roller, Brauns, and Faulmann schools.

The consideration of the questions submitted by the Government to the committee resulted in adopting the following resolutions: The representatives of the different systems are prepared under all circumstances to create a unified system of German stenography, even if such system contains little or nothing of the method of the particular system represented. The unified system shall have a fixed regulated character, and by its capacity for abbreviation as a method of expression shall meet all possible shorthand purposes. (Proposition of the Gabelsberger and Stenotachygraphy schools.) The rules of the commercial hand shall be simple, fixed, and burdened with few exceptions, otherwise the establishment of the system would be doubtful. The choice of signs and rules shall guarantee an easy and sure legibility and also a quick and rapid writing. (The last two propositions were unanimously adopted.)

Finally it was unanimously resolved to appoint a subcommittee of nine, one from each school, which should sift the proofs at hand of each method and report to the chief committee for a second conference the questions which should serve for the attainment of correct lines upon which a unified system of stenography can be based. [Earlier steps looking toward a unification of German shorthand systems were described in Daily Consular and Trade Reports on Aug. 19, 1907]

### AMERICAN DRILLERS IN BURMA.

[From London Financial Times.]

Two expert American drillers have just sailed from London en route from the United States to the Burma oil fields, where they are to erect and operate the first Parker rotary drilling installation in that field. This has been shipped to the order of the Burma Petroleum Co., on whose territories it will be used.

## SESAMUM CROP IN INDIA.

[From Vice Consul General Charles B. Perry, Calcutta.]

A supplementary memorandum on the sesamum crop of the 1911-12 season in India, issued by the Director General of Commercial Intelligence, shows that the total area under cultivation was 3,726,200 acres, as compared with 4,306,000 in 1910-11, and the estimated yield 371,400 tons, against 511,800 in the preceding season. The following table shows the area and yield, by Provinces, for the two years:

Provinces.	1910-11		1911-12	
	Area.	Yield.	Area.	Estimated yield.
	<i>Acres.</i>	<i>Tons.</i>	<i>Acres.</i>	<i>Tons.</i>
United Provinces.....	1,338,900	125,400	1,175,000	99,000
Central Provinces and Berar.....	895,300	76,400	916,900	74,900
Madras.....	573,200	48,300	628,300	52,600
Bombay.....	994,800	109,400	513,400	29,200
Eastern Bengal and Assam.....	251,600	39,700	231,300	38,200
Bengal.....	237,600	39,700	247,200	37,700
Punjab.....	148,700	14,900	92,200	9,900
Sind.....	53,300	12,000	68,000	4,500
Hyderabad.....	677,700	34,400	663,900	25,400
Total.....	5,206,000	511,800	4,526,200	371,400

† Including Native States.

Of the yield in the United Provinces in 1911-12, 301,400 tons was pure and 70,000 tons mixed, as compared with 421,800 and 90,000 tons respectively in 1910-11.

## LEVANTINE BUSINESS NOTES.

[From the Near East.]

**Big contracts.**—The Industrial Building Co. of Alexandria has obtained the contract for the building of the workshops and stores of the Suez Canal Co. at Port Said, the price being \$160,000. It is expected that the Société du Creusot will obtain the contract for the construction of the new breakwater for \$460,000.

**Pipe lines and refinery.**—The *Bourse Egyptienne* states that the Anglo-Egyptian Petroleum Co. has purchased in Suez 107 acres on which to erect a refinery. The company is, moreover, contemplating construction of a pipe line from Gensah to Suez. Another attempt is being made to build a Russian pipe line from Grosny to either Novorossiisk or Touapae.

**Public sewage works.**—Lord Kitchener refers in his report to the newly constructed mixed municipality at Port Said, and says that it has proved successful. Its revenue for 1912 is estimated at \$116,000, of which \$61,500 represent the Government contribution to the town expenses. The arrangements for the drainage scheme are being pushed rapidly, and it is hoped that the actual work will be commenced this year.

**American coal.**—The Consolidation Coal Co. has dispatched two steamers from Baltimore with 5,000 tons coal each for the Egyptian State Railways. This is the second contract for coal from that source. This contract calls for 50,000 tons, the first having been for 40,000 tons. [The Bureau of Manufactures has issued various trade opportunity notices and circulars in the past two years calling attention to the coal trade of Egypt and the Mediterranean.]

**Mariout Railway.**—Since the occupation of Tripoli and Cyrenaica the Khedive's railway line from Alexandria to Mariout has assumed considerable importance from a strategical, as well as a commercial, point of view. It is now announced that the Egyptian Government is about to acquire this line, which it has the intention of extending to Solloum. The Khedive will receive in exchange the large estates of Korachieh and Santa, which are among the finest lands in Egypt.

**BRITISH INDUSTRIAL NOTES.**

[From Consul Albert Halstead, Birmingham.]

**Profits of Municipal Undertakings.**

Birmingham owns and operates its water, gas, and electric supply and the street railways serving the city. From the accounts of these four undertakings for the municipal year ended March 31, 1912, it appears that the first three had a total profit, after making the usual allowances for sinking fund, depreciation, etc., of \$740,910, but that the water department had a deficit of \$355,731, a reduction of \$9,655 from the previous year. However, the water department charged only \$316,323 of this deficit to taxation, the balance being applied one-half to capital account and the other being carried forward.

The gas department, after expenditure for maintaining the plant at the highest degree of efficiency, allowance to public lighting account, sinking fund, etc., had a profit of \$392,634, an increase of \$24,526 over the previous year and the greatest amount on record. In addition, there was \$15,977 interest on the reserve fund, which, with the profit, was applied for the relief of taxation. The net average price of gas was reduced from 46 cents to 43 cents. The profits of the electric supply department applicable for the relief of taxation were \$113,083, an increase of \$23,301 over 1911. This surplus remained after the ordinary allowances for sinking fund, payment of interest on money borrowed, and carrying forward \$121,663 to the renewal fund. The Birmingham street railways, after meeting interest and sinking-fund charges and providing for the interest on the purchase money of a private line, placed \$243,325 to the reserve fund and had \$219,216 applicable for the relief of taxation.

**Steel Balls for Polishing Castings—Electric Vehicles.**

A prominent technical publication is authority for the statement that by introducing into a rumbling barrel steel balls one-sixteenth to one-fourth inch in diameter it is possible to polish castings and actually to burnish them to a very high degree. It appears to be customary to use enough balls to make up approximately twice the volume of the pieces to be rumbled.

The Engineer reports that a new organization is being formed in London to introduce all kinds of electrical pleasure and commercial vehicles propelled by Edison nickel-iron batteries. It is said that the Edison people in London contemplate establishing a large depot for the display of these vehicles, and that the central station authorities are prepared to furnish the necessary charging facilities.

**Bicycle, Motor Cycle, and Automobile Trade.**

British trade in ordinary bicycles for the current year will probably show results above the average, while the makers of motor cycles in the Birmingham district are exceeding previous records in output. Manufacturers' sales are said to be limited only by their productive capacity. In the automobile industry there was delay due to a shortage of certain materials, particularly special Sheffield steel, but now manufacturers are very busy.

During the first four months of the current year bicycles worth \$1,101,941 were exported from the United Kingdom, and shipments of bicycle parts aggregated \$2,690,892. Motor cycles valued at \$663,007 and parts amounting to \$232,663 were also exported. The

total value of automobiles, chassis, and parts exported for the first four months of 1912 was \$5,530,057. It is interesting to note that the aggregate value of automobiles and parts imported during this same period was \$11,774,725.

#### **Results of Formation of Metal-Bedstead Trust.**

As a result of the formation of the federation of metal-bedstead manufacturers [noted in Daily Consular and Trade Reports on Mar. 4, 1912], which organization includes 98 per cent of the entire industry, steps were taken to bring selling prices into closer relationship with the cost of production. This led to advances which varied in amount up to 10 per cent. Later, after the settlement of the coal strike, there was a sharp advance in prices of tubes, angles, and other materials, so that at the beginning of May the federation advanced its selling prices by 11½ per cent.

The total value of metal bedsteads and parts exported from the United Kingdom during the four months ending April 30, 1912, was \$1,159,818; in the similar period of 1911 the value was \$1,108,428 and in 1910, \$851,579. It is interesting to note as showing the increases in prices following the formation of the federation that though the value of the exports for the first four months of this year was \$51,390 more than in 1911, the weight of the material shipped was 223 long tons less, the total weight for the first four months of 1912 being 7,559 long tons.

---

### **CANADIAN FRUIT AND TOBACCO OUTLOOK.**

[From Consul Felix S. S. Johnson, Kingston, Ontario.]

The first fruit-crop report of the season issued by the Canadian Department of Agriculture indicates a splendid fruit year for the Dominion; the yield will, of course, depend on the weather to come. Prospects for a good apple crop are excellent; pears share in the good conditions shown by apples. The extremely low temperature of January and February seriously injured the peach blooms, but fruit growers of the Niagara district report that there are still more than sufficient left for a medium crop if no further casualties occur. Plums, grapes, cherries, strawberries, currants, and gooseberries wintered well. The raspberry canes were injured slightly. In some cases blackberries were hurt, but not seriously enough to affect the crop.

In the Province of Ontario a smaller acreage will be under tobacco this year than in 1911, but as this will probably result in more attention being given to the crop, a better quality is expected. The tobacco crop of 1911 was the largest on record (more than double the yield of any previous year), and is estimated to have amounted to 15,000,000 pounds, for which the farmers received \$1,700,000. Some cultivators received 12½ cents a pound, which figure the farmers say means a profit. Tobacco culture in Canada is confined almost wholly to the Province of Ontario, but in parts of the Province of Quebec the plant is grown, mostly for home use. In the fiscal year ended March 31, 1912, the Dominion exported 58,809 pounds of Canadian-grown leaf tobacco, valued at \$25,944. These shipments were divided; 8,761 pounds to Great Britain, 40,856 pounds to the United States, and 9,192 pounds to other countries, with respective values of \$1,320, \$22,521, and \$2,103.

**NEW PACKING MATERIAL FOR CALIFORNIA GRAPES.**

By a series of experiments extending over the past six years, the Department of Agriculture has found that California grapes packed with a filler of redwood sawdust keep better and longer in cold storage than when packed in ground cork. This opens a new field for the sale of Red Emperor grapes in the Eastern markets at a time when the problem of disposing of a large part of this crop is attracting attention from the growers. These grapes ripen at the end of the season and have hitherto been stored in open crates with only fair success. By picking the grapes at the proper time and packing them in redwood sawdust they can now be kept in excellent condition until about January 10, thereby enabling the growers to take advantage of the Christmas demand.

The extent to which a market for these grapes can be developed is as yet unknown, as only small experimental shipments have as yet been made. The two carloads shipped to the East during 1911 were favorably received by the trade and brought prices that yielded the growers a good profit. A number of growers are planning to pack their fruit in this manner this year, so that the shipments to the East may amount to 50 carloads or more. Small shipments of high quality Tokay grapes packed in this manner were sent from California to England and met with ready acceptance.

**Specially Prepared Sawdust Required.**

Redwood sawdust has been found to be peculiarly adapted to use in fruit packing, as it is more nearly neutral in odor and flavor than even ground cork and therefore does not impart its taste or odor to the fruit, as would the sawdust from other kinds of wood. The sawdust coming from the band saws used in the redwood mills is carefully dried and then sifted to eliminate the fine dust and the slivers, leaving about 50 per cent of the original sawdust suitable for use in packing. The preparation of the sawdust is done by some of the sawmills, one company having installed special machinery for the work, and the Department of Agriculture has an agent in the field to assist the growers in selecting the proper fruit for packing and in obtaining properly prepared sawdust.

**Careless Shipping a Danger.**

Possible sources of danger to this new industry are careless selection or packing of grapes by some growers, resulting in injuring the reputation of the storage grapes before they have gained a firm position on the market, and the possible overstocking of an undeveloped market. Only the finest grade of grapes should be used and they should be packed in properly prepared pure redwood sawdust.

The careless method of handling fruits in vogue at some transshipment points is particularly mentioned by the experts of the Department of Agriculture as a factor which tends to injure the fruit trade of the United States, especially in the foreign markets. The fruit growers of the United States have learned how to pack fruit so that it can reach its destination in good condition if properly handled, but their best efforts are often set at naught by the improper handling of the packages in transshipment.

**THE SHEA BUTTER OF AFRICA.**

[From Consul W. J. Yerby, Freetown, Sierra Leone.]

The commodity, next to tin, regarded as of the greatest importance in Northern Nigeria, is shea, in the form of the shea nut or shea butter. The shea tree, which is not found in the palm belt or near the coast, abounds over practically the whole of Nigeria between the latitudes of Lokoja and Kano, and the area of its cultivation is therefore served by rail and river transport, states a recent report to the Colonial Office at London by one of the Government officials in Northern Nigeria.

Shea has been exported for some years from districts adjoining the navigable waterways. The total exports of nuts increased from about 2,000 tons in 1906 to 9,000 tons in 1909, but owing to two bad seasons along the river and possibly to the large amount of labor taken for railway work the quantity exported decreased to about 4,500 tons in 1910. From 100 to 150 tons of shea butter appear to have been exported in 1909 and 1910. The Baro-Kano Railway opens up an entirely new field for this product. The basin of the Benue has hardly been touched for shea, and it is estimated that possible exports from Muri Provinces alone would be limited only by the capacity of the river steamers available.

Shea butter is used by the natives in Northern Nigeria and other parts of West Africa as an illuminating oil, for cooking, and as a medicine in the form of an unguent for rheumatism and other ailments of the body. For this latter use the natives prize it very highly. In appearance it is between that of beef tallow and mutton suet.

This product is shipped by the exporters of native products located at Lagos, Southern Nigeria, a list of whom is on file in the Bureau of Manufactures, Washington, D. C.

---

**UTILIZATION OF ATMOSPHERIC NITROGEN.**

The Bureau of Manufactures has just published a monograph by Consul Thomas H. Norton, of Chemnitz, Germany, entitled "Utilization of Atmospheric Nitrogen." The consul has been on special detail for the Department of Commerce and Labor.

For many years the world has been dependent on the nitrate beds of Chile for supplies of combined nitrogen, and as these beds are not particularly extensive and as the demand for combined nitrogen by the manufacturing and agricultural interests is rapidly increasing, serious efforts have been made to discover new deposits, and many prominent chemists have endeavored to perfect processes for utilizing atmospheric nitrogen. The monograph describes in detail the results obtained by the foremost European chemists, and the commercial as well as the technical aspects of the new industry are dealt with at length.

The subjects handled are the present supply of nitrogen, the synthetic production of ammonia, the synthesis of nitric acid, hydrocyanic acid, cyanides, nitrides, and calcium cyanamide from atmospheric nitrogen, and coal waste and peat as sources of ammonia. The monograph may be obtained upon application to the Bureau of Manufactures.

**STREET RAILWAY PRACTICES IN GERMANY.**

[From Vice Consul General De Witt C. Poole, jr., Berlin.]

I am reliably informed that no assessment of the cost of street railway extensions on the property supposed to be benefited thereby is made in Berlin. Real estate development interests not infrequently approach the local street railway companies on the subject of extensions into the locality which it is desired to develop. In these cases the street railway companies usually demand a guaranty of earnings for a limited period, contracting sometimes for compensation in accordance with transportation facilities offered. Thirty-five pfennigs ( $8\frac{1}{2}$  cents) per car-kilometer (kilometer = 0.62 mile) is a rate of compensation frequently agreed upon. These are, however, purely voluntary arrangements.

It is usual in Germany for street railway companies to pay a certain portion of their gross earnings to the municipality within the jurisdiction of which they operate. In Berlin the portion is at present 8 per cent. The franchise is in the nature of a contract, and the city stipulates for an option to take over the entire street railway property at a prearranged price on the expiration of the franchise.

---

**BRADFORD SHIPMENTS TO UNITED STATES.**

[From Consul Augustus E. Ingram, Bradford, England.]

Declared exports to the United States from the Bradford consular district for May, 1912, amounted to \$1,357,597, an increase of \$598,654 over May, 1911—more than accounted for in raw wool, which amounted to \$726,132 (British wool, \$147,905; colonial and foreign wool, \$578,227), the figures in May, 1911, being \$31,613 (British wool, \$42,947; colonial and foreign wool, \$38,666). In mohair, pickled sheepskins, leather, and a few other items there were slight increases, but in stuff dress goods, cotton linings, and other finished goods, as also yarns of all kinds, there were marked decreases.

---

**Apple Industry and Exports.**

The Bureau of the Census reports that on April 15, 1910, there were 151,323,000 apple trees of bearing age, and 65,792,000 trees of nonbearing age, in the United States; the production of apples in 1909 was 147,522,000 bushels, valued at \$83,231,000. According to the Census of 1900, there were 201,794,000 trees reported June 1, 1900, and the production of apples in 1899 was 175,397,000 bushels. Only about 10 per cent of the apples produced in this country are exported. They represent the very highest qualities in fresh fruit—about \$5,300,000 worth on an average for the past two years—and 45,000,000 pounds of dried apple exports last year, worth \$3,850,000.

---

*Chicory*, which is mixed extensively with coffee in Russia, is scarcely imported, as the home-grown chicory from the central parts of the Empire furnishes ample supply. Consul General Snodgrass states that the 17 chicory factories are principally in Poland and the Baltic Provinces, where the people use coffee to a greater extent than Russians in general, who are tea drinkers.

**TELEPHONE OPERATIONS IN DENMARK.**

[From Consul General E. D. Winslow, Copenhagen, Denmark.]

The annual report of the telephone company of Copenhagen for 1911 indicates prosperity. Receipts from rentals were \$1,050,000, from public phones \$191,000, for removals and entrance fees of new clients \$54,000.

Wages paid amounted to \$325,000; \$290,000 was expended in repairs and betterments; interest charges were \$145,000; the income tax took \$8,000. There was \$270,000 written off for wear and tear. The stockholders received \$225,000, or 6 per cent on the par value of their stock; \$27,000 was set aside for the pension fund, and the board of directors received \$5,000 for their year's labor. The amount written off for deterioration amounted to 3.3 per cent of the combined stock capital and bonded indebtedness. The Government will take over the company in 1918. The Copenhagen Telephone Co. operates not only in this city, but also over all the island of Zealand, which includes a territory of 2,000 square miles, with 1,100,000 people.

---

**NEW STATION AT PANAMA.**

[From Canal Zone Record.]

Plans for a modern passenger station to be built by the Panama Railroad Co. in connection with the proposed improvement of its Panama terminal, have been approved and preliminary work on the site has been begun. The main part of the new building, a front view of which is published herewith (issue of June 5), will be of the Italian Renaissance style of architecture, will have a frontage on Central Avenue of 170 feet, and will extend back from it 55 feet. The construction of the main part of the new station, outside of the foundations, will probably be done by contract, and bids for this work will be asked for within a short time. [Any call for bids for construction or for building supplies for the station will appear in "Proposals for Government Supplies," Daily Consular and Trade Reports.]

---

**SHORTAGE OF FLOUR IN LONDON.**

[From London Financial Times, June 6.]

At a meeting of the Master Bakers' Protection Society in London last evening it was decided to make inquiry of the leading bakery companies asking if they were prepared to at once raise the price of bread (in which event the society would so advise local associations) and to send a deputation to the Board of Trade to-morrow to point out the seriousness of the situation arising from shortage of supplies of flour owing to the strike.

---

**NEW CANADIAN STEAMSHIP SERVICES.**

[London Times' correspondence from Ottawa.]

The Government is inviting tenders for a steamship service from Canada to British Guiana, calling at intermediate ports, and for a line from Canada to Jamaica with a call at Bermuda. The Government of Jamaica gives a subsidy of \$100,000. These services are to be constituted in view of the new trade agreement which is expected to come into force at the end of the year.

---

**New English Cooperative Bacon Factory.**

The Herts and Beds Cooperative Bacon Factory's corner stone was laid at Hitchin on June 11. This \$100,000 undertaking is wholly British, and in that respect, says the London Times, is the first farmers' cooperative bacon factory in England. The counties of Hertford and Bedford contain over 50,000 pigs, and it is expected that this number will soon be much increased.

### PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the offices named.]

**No. 712. Navy Department supplies.**—The Bureau of Supplies and Accounts, Navy Department, Washington, D. C., will receive bids until July 2, 1912, for the following supplies. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 4649, bituminous coal; schedule 4650, cocoa, wheat flour in tins, evaporated milk. Bids are invited until July 9, 1912, for the following: Schedule 4651, tinned biscuits, green coffee, lemon and vanilla extracts; schedule 4638, mild rod steel. Tenders will be received until July 16, 1912, for the following supplies: Schedule 4653, enlisted men's revolver belts and holsters, officers' revolver belts and holsters, vitribestos pipe covering, rubber ponchos, electrical recording thermometer, leather hat washers; schedule 4657, boat chains, brass bull's-eye and signal lanterns, compressed air locomotive, lavatories, brass cross hooks and rings, Renshaw ratchets, panel and rip saws, machinists' hand taps; schedule 4660, billiard cloth, momie cloth, air hose, garden hose, mineral engine oil, whale oil, white cotton sheeting; schedule 4661, cutting compound, steam traps, phosphorus low pig iron; schedule 4663, printed forms; schedule 4655, compressed-air locomotive; schedule 4662, seamless copper and brass pipe, naval round rolled brass, naval rolled rod, brass, sheet brass, bar iron; schedule 4656, hydraulic blocking for powder presses; schedule 4652, steel rails and angle splice bars, creosoted railroad ties; schedule 4664, building red bricks, red lump fire clay, silica clay, crushed canister, broken limestone, silica crushed rock, molding Albany sand, blast sand, carborundum sand, white beach sand, green silica molding sand, Jersey coarse fire sand, molding Jersey sand, Lumberton sand, yellow molding sand; schedule 4659, naval rolled brass plates, hard-drawn rod brass, brass shapes and bars, bar iron, galvanized sheet steel; schedule 4654, manganese bronze in ingots, round naval bronze; schedule 4658, medium steel angles and I beams, special treatment steel plates.

**No. 713. Construction of public buildings.**—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., for the construction (including plumbing, gas piping, heating apparatus, electric conduits and wiring, and interior lighting fixtures) of the following buildings: (1) Until July 26 for the extension, remodeling, etc., of the United States post office at Oil City, Pa., the extension to be one story and basement of approximately 1,227 square feet ground area; stone faced; tin roof; fireproof construction. (2) Until July 29 for the extension, remodeling, etc., to the United States post office and customhouse at Bristol, R. I. The extension is to be one story and basement, of approximately 1,335 square feet ground area, brick faced, with stone trimming and tin roof. (3) Until August 6 for the United States post office at Carrollton, Ga. Building will be two stories and basement and will have a ground area of approximately 3,800 square feet, nonfireproof construction, stone, brick, and stucco facing, terra-cotta cornice, and tin roof. Drawings and specifications may be obtained of the custodians of the various sites or of the Supervising Architect.

### FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

**No. 9073. Machinery of various kinds.**—A member of an American manufacturing firm writes the Bureau of Manufactures that one of its customers desires a machine that will grind wood shavings into sawdust. A large demand exists for this class of machine; another foreign customer desires a machine that will chop up sugar cane into pieces suitable for horses and cattle, at the same time making a smaller product suitable for chickens.

**No. 9074. Honey.**—A business man in a city of 67,000 inhabitants, in a busy mining and manufacturing section, informs an American consulate that he desires to hear from American exporters of honey.

## COMMERCE AND INDUSTRIES OF NORWAY.

[By Vice Consul General Haakon E. Dahr, Jr., Christiania.]

According to the advance reports, the imports into Norway increased in value from \$107,760,951 in 1910 to \$118,487,678 in 1911, and the exports rose from \$73,186,566 to \$74,079,810. The figures for 1911 are subject to revision. The bulk of Norway's trade is with Great Britain and Germany, the latter country always holding the balance of trade strongly in its favor.

The trade with the United States is increasing and new articles are constantly being introduced, but the progress might be more rapid if American manufacturers would make greater effort to secure this trade. While salesmen from other countries are numerous in Norway, those of American firms seldom appear here. If salesmen with samples can not be sent, local agents or commission men should take their place. The total exports to the United States, as declared at the consulates in Norway, were valued at \$7,161,344 in 1910 and at \$8,711,662 in 1911.

### Decreased Output of Crops.

The crops in 1911 fell considerably below the general average, although fruits of all kinds gave unusually large returns, due to the long period of warm weather in the summer. The total valuation for the 1911 crops of all kinds, excepting fruits, vegetables, and seeds, is placed at \$49,400,000, against \$54,250,000 in 1910. The official returns for the past two years give the quantities as follows:

Crops.	1910	1911	Crops.	1910	1911
Barley.....barrels..	1,021,988	898,498	Potatoes.....barrels..	7,892,898	7,758,726
Hay.....tons.....	2,760,568	2,586,800	Rye.....do.....	315,734	334,180

The statistics of the expenditures of the Government and the counties for the promotion of all branches of agriculture in 1911 are

not yet available, but the total exceeded that of 1910, in which year it was \$341,880.

Tobacco is raised on a small scale on the west coast, in the district of Sogn. Experiments with sugar beets were made in 1911 by farmers living in the district of Jaderen, on the west coast, with satisfactory results.

#### Exports and Imports.

The values of the principal items of export and import in 1911, as given by the official preliminary report, are shown in the following table, compared with 1910 (only articles of Norwegian origin are included in the exports):

Articles.	1910	1911	Articles.	1910	1911
<b>EXPORTS.</b>			<b>IMPORTS.</b>		
Feed stuffs.....	\$407,300	\$942,420	Breadstuffs:		
Fishery products:			Barley.....	\$3,203,900	\$3,542,750
Cod—			Flour.....	2,634,170	3,269,330
Dried.....	3,962,380	4,907,400	Meal, rye.....	1,428,820	1,345,410
Salted.....	4,674,910	6,007,970	Rye.....	5,978,280	7,120,220
Guano.....	404,280	375,170	Coal and coke.....	8,250,510	9,213,520
Herring, salted.....	4,065,600	4,453,440	Coffee.....	3,237,520	4,410,480
Oil.....	2,063,570	2,931,140	Cotton.....	1,412,630	1,335,200
Roe.....	534,530	311,200	Hemp.....	583,570	253,520
Sardines, etc.....	2,840,570	4,252,360	Liquors.....	910,240	1,329,940

Pulp.....	11,977,380	10,990,380			

#### Shipping—Output of the Mines and Quarries.

Freight rates in foreign trade ruled high in 1911, the advance being particularly marked in the latter half of the year in outward freights. Bergen owns more and larger steamships than Christiania, but the latter port has more sailing vessels and its tonnage is the greatest in Norway.

The majority of the mines and quarries of Norway were either closed or only partly worked for two and one-half months in the summer of 1911, on account of labor troubles. The total production of pyrites and copper ore in 1911 was 350,000 metric tons (metric ton = 2,204.6 pounds), of which 316,254 tons was exported. The value of the pyrites mined is estimated at \$2,010,000, f. o. b. Norwegian port, and the copper is valued at \$469,000. The number of people employed in the copper and pyrite mines during the year was 4,000.

#### BERGEN.

[By Consul Bertil M. Rasmussen.]

Fish products continue to be the chief articles of export from Bergen, and constitute more than two-thirds of the entire exports to the United States. The sardine canning factories had an excellent season during 1911, as the supply of fish was plentiful during the

summer and fall. The market for Norwegian canned fish products is expanding, and the Fish Canners' Association is striving to keep up the quality and reputation of Norwegian sardines. They have endeavored to secure the enactment of laws prescribing the form of labels to be used and prohibiting the packing of winter catch.

Scarcity of rain at the proper time reduced the yield of agricultural products somewhat in this region during 1911. Of the three amts (counties) of this consular district, those of North and South Bergenhus showed shortages in the crops of barley, hay, oats, and potatoes, while in Romsdals Amt the hay crop was up to the average and the crops of potatoes and grain were above the normal amounts.

With the exception of a lockout in the shipbuilding trade in June, labor was well employed throughout 1911, and nearly all branches of industry had a fair year. There was great activity in house building, especially in the erection of 2-story houses accommodating two families. The "Typographical Quarter" deserves special mention. This consists of a number of small but modern houses in the Sandvigen district, built for the exclusive use of members of the typographical union. A new, modern school building, the completion of the new railroad station, and extensive harbor improvements made up the principal public improvements of the year at Bergen.

#### **Prosperous Year in the Shipping Trade.**

The stagnation of shipping rates that prevailed during recent years came to an end during 1911, causing a sharp advance in rates at the close of the year. The chief causes of the advance were the great increase in the world's commerce, the decrease in new tonnage, and the reluctance of shipping firms to renew expiring time charters. Early in 1911 the prevailing rates between the east coast of England and Bergen were \$0.97 to \$1.095 per ton and these later advanced to \$1.83 per ton. The advanced rates fell heaviest on coal and grain importers with unfilled contracts to carry out, based on freight rates of not over \$1.10. The Turko-Italian war caused little inconvenience at this port, but coal rates for Mediterranean points have been greatly advanced. Coastwise shipping as well as the over-sea trade between Bergen and Gottenborg, Stettin, Copenhagen, Hamburg, Rotterdam, Liverpool, Manchester, Swansea, Hull, and Newcastle had an exceptionally prosperous year, owing to large increases in both the passenger and freight traffic. At the close of 1911, the merchant fleet of Bergen consisted of 329 steamers of 257,564 net tons, and 76 sailing vessels, of 11,410 net tons. The number of vessels entered and cleared at Bergen during 1911 was 13,875, of 2,542,624 registered tons, of which 1,136 vessels, of 496,929 tons, were engaged in over-sea trade.

Results in the shipbuilding trade were better in 1911 than in the preceding year, notwithstanding the lockout during the summer that caused repair orders and several contracts for new tonnage to go to foreign firms. The recently organized Norwegian-American Line will undoubtedly fill a long-felt want by providing direct transportation between Bergen and New York. Two modern 12,000-ton vessels are now being built, and these will soon be followed by one or two more of the same type, enabling the line to maintain a weekly passen-

ger service between the two ports. One of the leading dailies of Christiania commented as follows concerning the new line:

Measures must first be adopted that will lead to a closer and firmer connection between commerce and industries on the one side and the shipping interests on the other, and arrangements made so that our imports and exports may be made direct, without having Denmark or Germany as middlemen. In order that the Norwegian-American line may be established securely and without delay, it must have a clear start. Arrangements must be made for fast trains to run alongside the first vessel that leaves Bergen for the United States, and the first passenger arriving here from New York must be enabled to step aboard a train that will speed him to any point in northern Europe without delay.

#### **Imports of American Goods.**

As the Norwegian customs statistics credit imports to the last direct shipping point, it is impossible to ascertain the actual volume of the imports of American goods into Norway, but the trade between the United States and this country shows a satisfactory increase from year to year. In the same manner, the export of fish products from this district is credited to the Netherlands, as the bulk of the fish products exported to the United States from here is transshipped at Rotterdam.

As usual, food products and feed stuffs constituted the bulk of the commerce between Norway and the United States during 1911, the imports of foodstuffs from the United States having been as follows, in pounds: Coffee, 27,336; flour, 8,210,429; lard, 473,878; meat, 77,585; oleomargarine, 1,375,325; pork, 179,319; sirups, 5,762,116; and sugar, 26,093.

Other American products imported in considerable quantities at this port were: Cash registers, cotton, cottonseed oil, fresh and dried fruits, farm machinery, iron and steel beams, leather, motors, paint, petroleum, mowing machines, typewriters, sewing machines, rubber goods, and wire, but no statement of the quantity or value of such imports is available.

Textiles and textile fabrics are supplied almost exclusively by English and German houses, which have the advantage of proximity. Their commercial representatives canvass the market regularly and thoroughly, studying the needs and conditions, enabling them to meet the requirements of every section.

#### **Consular Assistance for American Exporters.**

This consulate received more commercial inquiries in 1911 than any previous year, the great majority of them in quest of information concerning new markets. The articles receiving most attention and concerning which inquiries were most frequent, were: Apples, adding machines, automobiles, clothing (ready-made), furniture, hardware, marine motors, motor boats, musical instruments, safety razors, salt, shoes, spectacles, sirups, and tools.

The information communicated to the inquirers, by letter or through commercial reports, did not always lead to results, nor was it always possible to fully comply with requests made; but many of them have been acknowledged as having contained information of practical value, and in not a few instances direct results were obtained.

Considerable time and attention have been devoted in the past to investigating the prospects for a market in this district for American

automobiles, and the conclusion was reached that conditions were favorable providing American manufacturers would grant as liberal terms to agents as European houses do. Many attempts were made to induce some American firms to do this, but without success; they clung tenaciously to the old method of conducting their foreign business by giving a general agency for this or that country, and sometimes for the whole of Europe, to some syndicate at Hamburg, Copenhagen, Rotterdam, or elsewhere.

To illustrate the result that such arrangements often lead to, it is only necessary to relate a case that recently occurred in this district. A certain automobile company requested this consulate to "recommend some reliable dealer in your territory whom you consider competent to handle our product." A competent man was found and his name was sent to the company, and was accepted as the local agent. A short time thereafter the agent reported to the company that he had secured contracts for the sale of three cars. He then received a letter from the company stating that the general agency for Denmark, Norway and Sweden had in the meantime been given to a firm at a certain European port, and that henceforth he would be under the jurisdiction of these general agents. The matter was then taken up with the general agents, who instead of making the same price and terms, added their commission of about \$50 to the original price, at which price the sale could not be made and was consequently annulled.

#### General Imports and Exports—Exports to the United States.

The following table shows the values of the principal imports and exports at Bergen during 1909 and 1910, the latest years for which statistics have been made public:

Articles.	Imports.		Exports.	
	1909	1910	1909	1910
Dry goods.....	\$813,056	\$901,927	\$49,494	\$54,618
Dyestuffs.....	178,890	185,742	28,055	42,269
Food products, animal.....	280,194	261,622	5,248,672	5,750,181
Fruits and vegetables.....	282,338	297,534	10,076	28,247
Grain.....	5,605,434	5,714,912	403,742	234,205

Metals, and manufactures of.....	1,040,223	1,389,794	321,700	203,144
Minerals, and manufactures of.....	1,307,982	1,358,224	398,355	483,567
Paper.....	40,436	51,751	29,614	29,507
Ships, machinery, etc.....	1,397,428	1,243,038	51,965	192,183
Spirits.....	210,074	233,642	9,299	10,693
Tallow, oils, fats, and manufactures of.....	1,277,038	1,619,149	635,133	716,905
Textiles.....	964,960	1,062,379	34,036	29,989
Wooden articles.....	117,571	98,676	8,093	22,106
Yarn and thread.....	480,314	609,164	7,691	14,956
All other articles.....	213,376	210,246	21,384	31,439
Total.....	16,225,320	17,560,485	8,502,688	9,325,802

Of the imports from the United States during 1910 oleomargarine showed an increase of \$4,127 over the preceding year, cotton \$31,222, machinery \$55,476, and sirups \$117,089. The imports of American meat decreased \$12,094.

The total exports from this consular district to the United States during 1911 were valued at \$1,358,115, against \$1,341,479 in the preceding year. Large increases were shown in the shipments of

furs, cod liver oil, and hides and skins, while considerable decreases were noted in cheese, mackerel, aluminum, dried fish, and sardines.

The decreases in the shipments of dried fish and mackerel were due to the high prices which prevailed for these products, but the great falling off in the exportation of sardines is difficult to explain, in view of the fact that the shipments from other Norwegian ports to the United States show large increases. The following table gives the value of the principal exports to the United States during 1910 and 1911, according to the invoices declared at this consulate:

Articles.	1910	1911	Articles.	1910	1911
Aluminum.....	\$68,005	\$42,037	Flour, herring.....		\$14,878
Cheese.....	23,061	15,882	Furs.....	\$273	4,878
Fish:			Hides and skins.....	372,162	460,941
Anchovies.....	6,750	7,741	Oils:		
Canned.....	11,026	16,540	Cod-liver.....	141,276	195,407
Cod.....	7,698	5,217	Lubricating.....	1,132	1,840
Dried.....	250,458	206,825	Peanut.....		4,173
Herring—			Paint.....		2,100
Salted.....	148,614	174,675	Tow.....		1,468
Smoked.....	113	1,029	All other articles.....	5,775	2,338
Mackerel.....	105,544	86,688	Total.....	1,341,479	1,358,115
Sardines.....	197,894	114,458			

The exports from Bergen to the Philippines consisted entirely of codfish, of which 19 tons, valued at \$2,679, were shipped in 1910 and 12.5 tons, valued at \$2,008, in 1911. There were no shipments to the other insular possessions of the United States.

### CHRISTIANIA.

[By Vice Consul General Haakon E. Dahr, Jr.]

Owing to its favorable location, excellent communications with other parts of Norway and with the principal cities of foreign countries, and the enterprise of its citizens, Christiania maintains its place as the commercial center of Norway. The population of the city at the beginning of 1911 was 244,424.

The principal imports, and the amounts or values thereof from the United States, were as follows in 1911 (ton=2,240 pounds):

Articles.	Total.	From United States.	Articles.	Total.	From United States.
Automobiles and motors, value.....	\$200,020	\$67,704	Machines and machinery—Continued.		
Broadstuffs.....tons.	36,391	13,420	Sewing and knitting machines.....value..	\$162,863	\$21,520
Cotton.....do.	2,444	608	Dolls:		
Cottonseed meal, etc.....do.	24,522	7,359	Cottonseed.....tons.	2,622	2,477
Fruit.....do.	770	447	Petroleum.....do.	31,373	21,498
Iron tubing.....do.	6,149	1,021	Provisions.....do.	6,321	4,496
Machines and machinery:			Tobacco.....do.	1,254	605
Agricultural machinery, value.....	\$106,947	\$60,826	Tools.....value..	\$338,377	\$105,533
Typewriters, cash registers, and adding machines.....value..	\$112,005	\$65,085	Wire and wire rope.....tons..	6,102	763

The leading items of export from Christiania in 1911 were as follows, in tons: Hides, 1,559; matches, 4,394; paper, 19,567; wood flour, 3,231; wood pulp, 103,000.

**Shipping—Homes for Laborers—Industries.**

The merchant marine of Christiania consists of 328 steamships of 361,587 gross tons, 6 motor ships of 311 gross tons, and 59 sailing vessels of 65,237 gross tons. The arrivals in 1911 numbered 1,777 steamers of 1,400,178 tons, and 575 sailing ships of 85,655 tons.

During 1911, Christiania was visited by 1,771 foreign salesmen, representing the following countries: Germany, 883; Denmark, 350; Great Britain, 177; Sweden, 145; France, 78; Netherlands, 49; Austria, 43; all other countries, 46.

On account of the stringent building laws, tenements of 1 to 3 rooms and kitchen are hard to obtain. The city is now willing to guarantee mortgages amounting to 75 per cent of the construction costs to further the building of tenements for workmen, but even these arrangements have not provided sufficient lodgings and it has been necessary to build wooden barracks to meet the immediate needs.

The industries of Christiania are classified as follows:

Industry.	Plants.	Employees.	Industry.	Plants.	Employees.
Machine shops, including two shipyards.....	162	7,792	Wood manufactures.....	86	1,566
Chemicals, paints, and dye-stuffs.....	23	739	Food products.....	123	3,735
Electric apparatus, etc.....	19	80	Clothing.....	61	2,515
Textiles.....	23	2,554	Stone, monuments, etc.....	11	187
Paper, etc.....	31	1,052	All others.....	88	2,073
Leather and rubber.....	18	313	<b>Total.....</b>	<b>645</b>	<b>22,607</b>

**Exports to the United States.**

The values of the principal exports from this consular district to the United States during 1910 and 1911, as declared at the Christiania consulate and the consular agencies, are shown in the following table:

Articles.	1910	1911	Articles.	1910	1911
<b>CHRISTIANIA.</b>			<b>CHRISTIANSAND.</b>		
Acid, oxalic.....	\$24,660	\$55,338	Aluminum.....	\$147,546	\$21,454

All other articles.....	24,660	26,045			
<b>Total.....</b>	<b>3,201,993</b>	<b>4,816,586</b>			

The exports to the insular possessions of the United States from this consular district in both 1910 and 1911 consisted entirely of condensed milk, the values being as follows: To the Philippines,

\$44,209 in 1910 and \$85,737 in 1911; to Hawaii, \$184 in 1910 and \$819 in 1911; to Porto Rico, none in 1910 and \$127 in 1911.

#### Trade at Christiansand Agency.

Business at Christiansand was generally better in 1911 than in the preceding year, especially on account of the higher freights obtained by the shipping trade. Most of the fishing interests received good returns, with average yields and good prices. The crop returns for the year were less than the average, but the quality of most of the products was very good. The fruit crop was large and better than last year's in both quantity and quality.

The prices of sawn wood were about the same as in 1910, props and sleepers showing some increase. Low water in the rivers made it difficult to get the wood down to the coast, and the exports fell off somewhat. Wood-pulp prices were low at the beginning of the year, but rose during the latter half of the year to top prices, on account of low water in the rivers and the lockout in the trade. Paper prices were generally low. The number of emigrants leaving here for America during 1911 was 2,325, of whom 2,302 went to the United States.

The principal imports into and exports from Christiansand during 1911 are shown in the following table:

Articles.	Quantity.	Articles.	Quantity.
<b>IMPORTS.</b>		<b>EXPORTS.</b>	
Breadstuffs:	<i>Pounds.</i>	Aluminium.....	<i>Pounds.</i>
Barley.....	3,105,074	Canned goods.....	3,046,281

<sup>1</sup> Barrels.

<sup>2</sup> Number.

#### Commercial Review of Trondhjem.

The grain crop in the vicinity of Trondhjem in 1911 was somewhat below the average. The hay crop was much above normal and large quantities of hay were shipped to other places, especially to southern Norway. The cod and herring fisheries of the surrounding districts and of northern Norway were rich and very satisfactory to the fishermen, who now provide their boats with motors. The number of emigrants from this port dropped from 7,132 in 1910 to 4,768 in 1911. The principal articles of import during 1911 at Trondhjem, in pounds or value, were as follows: Bacon, 86,829; coffee, 34,544; flour (wheat), 7,815,408; fruit, 98,767; grits (oats), 255,427; lard, 78,595; machines and parts, \$8,650; margarin, 545,463; molasses, 4,140,489; motors, \$9,800; oils, 727,790; and pork, 15,26,079.

**STAVANGER.**

[By Consul P. Emerson Taylor.]

Commercially 1911 was a prosperous year for the Stavanger consular district, more for the shipping interests and the fishing industry, however, than for the agricultural and dairy interests. This consular district embraces Stavanger Amt (county), in southwest Norway, and has a population of 140,700, with seven cities of over 1,000 population. Aside from the small fertile plain of Jaederen, which is one of the best agricultural sections of Norway, the district is mostly mountainous, with many islands on the west coast and many fjords extending far up into the mountains and presenting some of the most picturesque scenery in Europe.

There is but little timber in the district and no coal, iron, or other mineral resources in workable quantities. There are no large manufacturing industries except the fish canneries, of which there are 45 in the district, 35 being at Stavanger and 6 at Haugesund. There are also canneries at Flekkefjord, Kopervik, Egersund, and Skudenaeshavn.

**Recent Development of Stavanger.**

Until a few years ago Stavanger was in many respects a city of the eighteenth century. Its streets are yet narrow and crooked, many of them wide enough for only the single driveway of cobblestones, without sidewalks; its shops and stores are generally small, and hand-made goods still constitute a large part of the stocks of many of them. The houses are generally of wood and almost all are old. The great growth of the city in commercial importance in the past 10 years, owing to the development of the fish-canning industry, has in many ways begun to modernize the city and is constantly opening new markets for American goods. The city now has a splendid municipal electric light and power plant, which lights the city and its homes at a low rate and sells its surplus power to the fish factories. A municipal gas plant, a slaughterhouse, employment bureaus, and public bathhouses are maintained by the city, and during 1911 the city council took the initial steps to widen and straighten some of the principal streets sufficiently to permit the installation of a street car system in the near future.

With the exception of a few of the finer homes recently built the houses of Stavanger are not equipped with baths or furnaces. Experiments are now being made with a view to installing a municipal electric-heating system for the entire city by enlarging and extending the municipal power plant. This plant has abundant power available from its waterfalls, but the economic phases of the long transmission of the power have not yet been sufficiently worked out to make the project a certainty.

With the remarkable industrial prosperity of Stavanger during the past three years building operations have been extensive. There were 202 new houses built in 1910 and 238 in 1911, and the assessed valuation of city property in 1911 showed an increase of 53 per cent over that of the preceding year. The progressive modern spirit is seen by the invasion of the automobile in spite of the narrow streets. While three years ago there were none in the city, in 1911 there were 15. The latter year first witnessed the display of electric signs in large numbers.

Many of the best homes erected during 1910 and 1911 are thoroughly modern, and the city's new post office, municipal, and public school buildings are all modern in construction and furnishings.

**American Goods Popular—Agricultural Conditions.**

One of the most noticeable evidences of this modern spirit is the remarkable increase in the sales and exhibits of American goods in the leading stores of the city. Two years ago this consulate endeavored to increase the interest in American goods by loaning to leading merchants American catalogues from the catalogue files, which were never visited by the merchants. The vice consul now delivers the catalogues and personally calls attention to goods attractively shown in the particular line, and the results attained have been most encouraging.

In these two years there has been a remarkable extension of the exhibits of American goods of nearly all kinds in the larger store windows. Quarter-page advertisements of American typewriters, sewing machines, motors, and farm machinery now frequently appear in the local papers, while hundreds of smaller American articles are on sale in all the leading stores.

The past year was less prosperous for the farmers than for any other class in the community, although the farming and dairying interests so overlap that the shortage of farm crops also affected the dairy interests to some extent. Owing to a dry and rather warm summer the yield of all farm crops for 1911 was below that for 1910. The fruit crop, however, especially apples and berries, was exceptionally good. The loss to the farmers on account of the falling off in the hay crop was especially heavy.

The hay and potato crops together constitute five-sixths of the total value of all farm crops in the district. The Government reports the yields and values of the farm crops of this district in 1910 and 1911 as follows:

Crop.		1910		1911	
		Quantity.	Value.	Quantity.	Value.
Wheat.....	buabels..	851	\$1,296	805	\$1,152
Rye.....	do.....	4,794	4,502	4,139	3,457
Barley.....	do.....	57,188	45,667	51,633	39,502
Oats.....	do.....	779,682	504,429	518,501	\$78,716
Other grain.....	do.....	3,104	2,463	2,667	2,519
Potatoes.....	do.....	1,673,256	778,701	1,563,046	601,632
Hay.....	tons.....	537,236	2,266,787	427,925	1,620,467
Total.....			3,628,787		2,942,477

**Dairies—Prosperous Year for Shipping.**

The 35 creameries in this consular district used 34,650,000 quarts of milk during 1911. Statistics as to their output are not obtainable. The farmers received 2.8 to 3 cents per quart for the milk, an advance of about one-fourth cent over 1910. A dairy school is conducted in the district by the Government. There are 6 margarin factories in the district, with an annual output of about 7,700,000 pounds.

Shipping rates were high and all the lines report good business throughout 1911. The new lines to Hamburg and to Liverpool and

Swansea, which were started in 1910, did good business and the latter line bought two new ships to care for its increased trade. In November, 1911, the Norwegian-Mexican Gulf Line announced that in December its ships would also call at New York and Philadelphia, as well as at Newport News and the Gulf ports, but later revoked this decision. Plans were made for direct communication with Bordeaux and other French ports after April 1, 1912. The opening of the new Norwegian-American line, giving this city direct communication with New York, will do much toward increasing trade with the United States. The only direct connection with United States ports at present is with New Orleans, Galveston, and Newport News. The ships entering Stavanger in 1911 numbered 1,904 steamers, of 986,053 tons, and 140 sailing vessels, of 20,562 tons, against 1,726 steam and 160 sailing ships in 1910. Stavanger owned vessels of over 50 tons numbered 115, of 64,016 tons, in 1911, against 111, of 52,678 tons, in 1910.

#### Fish-Canning Industries.

Fishing is the chief industry of this district, and more than 6,000 persons are employed in catching fish, while about the same number are employed in the fish canneries. It would be difficult to estimate the number indirectly dependent for a living upon the prosperity of this industry. The money supply comes from the heavy fish exports, and the banks, merchants, and business men generally are beneficiaries of the increasing exports.

All the fish-canning companies were prosperous during 1911, and several new factories were erected. The combined output of the 45 factories of the district is estimated at 95,000,000 to 100,000,000 cans, the largest plant having an annual output of over 20,000,000 cans. The sardine pack exceeds the output of all the other kinds of fish products combined, and the Norwegian sardines have invaded practically every market in the world. The United States takes the largest share of these exports, and the American shipments from Stavanger in 1911 showed an increase of \$200,000 over the preceding year, while the exports of a number of other fish products fell off. The quantities and values of the total catches of sprats and herring in 1910 and 1911 are shown in the following table:

Variety.	1910		1911	
	Quantity.	Value.	Quantity.	Value.
Sprats.....quarts.....	11,339,790	\$203,409	13,490,620	\$407,427
Herring.....do.....	2,041,990	19,895	4,835,168	41,702
Mixed.....do.....	188,540	2,619	308,330	3,923

The average prices received by the fishermen in 1911, per 22 quarts, were 68 cents for sprats, 18.7 cents for herring, and 30.5 cents for mixed sprats and herring. Of the 1911 catch of sprats, 11,987,910 quarts were smoked (sardines), and 1,010,460 quarts were spiced (anchovies, etc.). Of the herring, 3,677,410 quarts were smoked, 325,600 quarts spiced, 334,290 quarts marinated, and 339,570 quarts salted. The mixed fish were all smoked.

**General Industrial Conditions.**

The prosperity of the fish canneries extended to the allied industries. These include box making, can making, key making, and label printing plants, a nail factory, and a fish oil, meal, and guano factory. Prices were good for all fish products, but there was a considerable falling off in the mackerel trade. Good prices enabled the factories to keep their employees at steady work and at advancing wages. There were no strikes of any consequence. Bank deposits increased 11 per cent.

The shipbuilding yards built two new steamers and have orders for four more for construction during 1912. Other manufacturing plants of the district include a woolen and textile factory, a brickmaking plant, two dry-milk factories, a soap factory, a combined brewery and flour mill, an earthenware factory, and electric steel works. These plants, except the latter, which is not yet fully completed, all increased their outputs over those of 1910 and report a prosperous year. The following new plants have been built during the year: Six new fish-canning factories, a casein factory, a tin factory, and a shot factory. The two large woolen mills of the district have consolidated and erected one of the largest mills in Norway just outside the city.

**Increased Trade with the United States.**

As nearly all American goods imported into Stavanger, except those coming from the Gulf ports, are transhipped at foreign ports and are not credited to the United States in the customhouse statistics, no entirely accurate statement can be made of the imports from the United States, but there are many evidences of a large increase.

The leading merchants now keep regularly in stock American machines and American goods of many kinds that were formerly ordered only on demand. Since the middle of 1910 six leading shoe stores have begun carrying stocks of American shoes. American sewing machines, typewriters, safety razors, washing machines, toilet articles, and many other articles of general utility, as well as farm machinery of nearly all kinds, are now regularly on exhibition in the largest stores and are finding an increasing sale. The American automobile made its first appearance in 1911. Many American marine motors are sold.

The lack of direct steamship connection between this port and the chief Atlantic ports in the United States has been a great drawback. It necessitates the delay and additional expense incident to transshipment from another European port; and it often occasions the making of purchases through some Continental general agent. This prevents that direct business intercourse between buyer and seller, and the acquaintance with and understanding of each other that do much to promote and maintain permanent and satisfactory business relations.

The absence of American traveling salesmen in this territory, leaving the field to the large numbers of English and German salesmen who are here each week, also tends to turn the importer away from American firms. These two adverse phases of the situation are the chief causes of the third difficulty most American firms encounter in trying to enter this market, namely, almost total ignorance of the

requirements of the market, of credits, of the commercial standing of the importers, of the tastes and temperament of the buyers, and of the language and commercial customs of the market. These are subjects constantly studied by, and thoroughly familiar to, the English and German competitors of the American firms. Their salesmen cover the territory regularly and thoroughly, speak the language of the people, and know their buyers personally and are acquainted with the commercial usages of the market.

#### **Sales Limited by Character of the Market.**

Perhaps the chief drawback, however, to the more rapid introduction of American goods lies in the nature of the market itself. The wage scale and general standard of living are vastly different from the standard of wages and living in the United States, and do not admit of the purchase by the wage earner here of many of the articles regarded in the United States only as necessities, but here as distinct luxuries. This is true of nearly all the labor-saving kitchen devices, high-grade furniture for both office and home, all bathroom and other modern fixtures for the home, and many of the daintier American foods, especially breakfast foods. These are things regarded here as solely for the few who constitute the wealthy class. Americans who can not understand the high cost of living and the extremely low wage scale in many parts of Europe overlook the fact that here an entirely different standard of life exists for the wage earner, and luxuries have as yet had small place in the home and life of the Norwegian wage earner. Industry, frugality, and self-denial characterize the Norwegian laborer, and he is limited in his purchases to the cheapest goods, largely the handmade goods of his own and neighboring European countries.

While the thousands of returning Norwegian-Americans, with their more extravagant tastes and most of them with more money, tend to increase the demands of the community for better goods and more luxuries, yet the prices of nearly all commodities have advanced more rapidly than the wage scale, and this has tended to check increasing purchases of the luxuries. But even the slight advances in wages, the influx of machine-made goods, the increasing knowledge of labor-saving devices, and the increasing longing for moderate-priced luxuries are gradually fixing new standards of living and opening new markets for American goods, in spite of higher prices. Notwithstanding its adverse features, therefore, this market offers an inviting field to the American exporter. The rapid growth of the manufacturing industry, resulting in modernizing the city in many ways, has greatly stimulated the purchases of American electrical appliances, modern office and factory devices and machines, and the smaller types of modern farm machinery. For the American manufacturer who will take the trouble to investigate the needs of the market, and then meet its requirements, the outlook for the future in this district is distinctly encouraging. The growing conviction of the superiority in appearance and quality of American goods is slowly but surely giving them the lead.

#### **General Imports and Exports.**

The principal increases in the imports into Stavanger were in food-stuffs and tin plate, due to the underproduction of farm crops in the

district in 1911 and the growth in the canned sardine business. Decreases were shown by barrel hoops, cement, and potatoes. The falling off in the importation of cement was due to the purchase of nearly all the cement used here in 1911 from the new cement plant at Christiania, while in former years all the cement was imported. The following table shows a comparison of the principal imports and exports at Stavanger during 1910 and 1911.

Articles.	1910	1911	Articles.	1910	1911

#### Exports to the United States.

The exports to the United States in 1911 from Stavanger showed a slight increase over those of 1910. Large increases were made by sardines, herring in oil, and fertilizer, with declines in many of the other fish products. The fish exports go to many ports of the United States, on the Atlantic, Pacific, Gulf, and Great Lakes. The fertilizer is chiefly whale and fish guano and meal, and goes to the South Atlantic and Gulf ports. The values of the principal exports to the

United States during 1910 and 1911, according to the invoices declared at this consulate, are shown in the following table:

Articles.	1910	1911	Articles.	1910	1911
Fertilizer.....	\$46,001	\$105,407	Fish and fish products—Con.		
Fish and fish products:			Mackerel.....	\$307,890	\$180,164
Anchovies.....	47,340	38,796	Sardines, canned.....	934,657	1,048,531
Appetitsild.....	9,794	12,615	Sardelings.....	2,057	1,192
Canned.....	11,876	2,295	Provisions:		
Crab.....	2,408	2,982	Cheese.....	2,831	3,473
Fish balls.....	93,348	67,162	Game.....	1,996	1,116
Gaffelbiter.....	2,483	5,455	Meat.....	8,190	6,912
Herring—			All other articles.....	3,705	6,416
In oil, etc.....	160,320	226,051			
Salted and smoked	77,716	66,577	Total.....	1,712,702	1,775,144

The exports to Hawaii rose from \$140 in 1910 to \$1,850 in 1911, being made up entirely of canned fish in both years. Canned fish to the value of \$2 was shipped to the Philippines and \$295 to Porto Rico during 1911.

### WATERPROOF CLOTHING FOR ARGENTINE NAVY.

[From Lieut. Commander R. W. McNeely, Naval Attaché of the American Legation at Buenos Aires; transmitted by Consul General R. M. Bartleman, Buenos Aires.]

While the Minister of Marine of the Argentine Navy will be pleased to receive, at any time, information in regard to waterproof material, it is not customary for him to deal directly with manufacturers or agents when a contract is to be let. When supplies of this nature are needed for the Argentine Navy, the Minister of Marine sends specifications to the Chiefs of the Argentine Naval Commissions in the United States and in Europe, and directs them to purchase the amounts desired. It seems, therefore, that the most satisfactory method would be for American firms to confer with the Chief of the Argentine Naval Commission in the United States [whose address may be obtained from the Bureau of Manufactures].

The chief of staff has furnished the following specifications of waterproof clothing used by the enlisted personnel of the Argentine Navy, and a free-hand sketch [which latter will be loaned by the Bureau of Manufactures]:

*Coat.*—Black waxed, doubled, with stiff or straight collar 5 centimeters (1.9685 inches) high, lined with felt; fitted with two rows, each one with three black bone buttons, the left ones outside or visible, and the right-hand ones covered by the lapel; large enough to wear over an overcoat, and it must not go beyond the waistline over 20 centimeters (7.874 inches).

*Trousers.*—Black, waxed, wide, without buttons, and with a draw string in the waistband..

*Southwester.*—Waxed, black, lined with linen or canvas, the crown to be in the form of a spherical cap with circular brim, with felt-lined ear flaps fitted with chin bands.

*Phosphate-rock production.*—The Geological Survey reports a considerable increase in production of phosphate rock in the United States during 1911, when the total marketed output was 3,053,279 long tons, valued at \$11,900,693, as compared with 2,654,988 tons, valued at \$10,917,000, in 1910. During 1911 there were exported from the United States 1,246,577 long tons of phosphate rock, valued at \$9,235,388, in contrast to 1,083,037 tons, value \$8,234,276, in 1910.

**TASMANIAN APPLE TRADE EXPANDING.**

[From Consul Henry D. Baker, Hobart.]

Exports of fruit from Tasmania this season have exceeded any previous records, the total quantity of apples and pears up to the end of April, 1912, aggregating 945,104 bushel cases. The amount sent away during the previous season up to the end of April numbered 798,674 bushel cases. There will yet be a considerable number of apples shipped from here to the Sydney market, but for the English and Continental markets the season has closed. During the present season 21 special steamers have called and two vessels have taken fruit to South America. The quantity shipped to the United Kingdom to date (Apr. 30) is 638,340 bushel cases, which, compared with the figures for the corresponding period of 1911, is in excess by 106,839 cases.

The Tasmanian Mail, published at Hobart, gives some idea of the magnitude of the Tasmanian fruit business by mentioning that the number of bushels of apples and other fruit produced in Tasmania this season would, if placed in line, reach from Hobart almost to Sydney, a distance of 623 miles, and would form a 6-foot wall of 130 miles from Hobart to Launceston, while the weight of the case-making material must exceed 10,000 tons. The rapid growth of the fruit-shipping business is shown by the fact that during 1901 the number of bushel cases shipped was 218,546; in 1908 it had risen to 487,967, while this season it is up to nearly 1,000,000, with promise of a much larger increase next year. There are at present 20,412 acres devoted to orchards in Tasmania. The Tasmanian Mail states that it will not be long before there are 30,000 acres of apple orchards in this State, and if this area only averages a yield of 100 bushels to the acre the result will be 3,000,000 bushels annually.

**The Apple Districts—Excellent Profits.**

At present the southern part of Tasmania contains the leading fruit district, most of the apples being grown in the valleys of two parallel rivers, about 30 miles apart—the Derwent River, at the mouth of which is Hobart Harbor, and the Huon River. Both rivers are navigable about 30 miles from the sea, and so permit easy transportation of the fruit to Hobart, where ships up to 13,000 tons can berth at the wharves and load with this fruit for all parts of the world. A new apple district is fast developing in Tamar River Valley, northern Tasmania, and also some large and successful orchards have lately been established near the eastern coast. Apple growing in Tasmania flourishes most in country too poor and rough for general agriculture; the richest soils are said to be undesirable for apple growing, as they cause too much growth of wood instead of fruit. As apple growing even on a small acreage yields good returns, there is now active demand for land suitable for orchards. Not only is apple growing being taken up by new settlers in Tasmania, but also many retired naval and military men, doctors, lawyers, and business men have been planting orchards on the slopes above the three leading rivers. It is not uncommon to hear of net profits of \$100 to \$150 per acre from these orchards; in fact, the latter figure is about the average return in Tasmania from a well-managed orchard in full bearing.

The cost of starting orchards here is about as follows: Crown land can be obtained from the Government for about \$2.40 per acre. The cost of fencing will amount to about \$2.13 per chain (66 feet); clearing the land varies from \$25 to \$100 per acre; plowing \$4 to \$5 per acre; trees cost about \$17 per 100; planting \$4 per acre, and cost of cultivation on small areas \$5 per acre yearly; also two horses and implements would cost about \$300 more. A well-managed Tasmanian orchard begins to give returns the fifth year after planting. Orchard property may be purchased here from \$300 per acre when three years old up to \$1,000 per acre for trees in full bearing.

#### **Packing and Grading on the American System.**

The cases used in the export of Tasmanian apples measure internally 18 by 8½ by 14 inches, have a capacity of a trifle over a bushel, and go about 23 to the ton of shipping space. The apples after being put through locally made grading machines are each wrapped separately in paper mostly imported from Sweden. Since the 1st of January all the imported paper for wrapping fruit has been admitted into the Commonwealth of Australia free of duty. Most of the packers utilize a thin layer of wood wool at the bottom of the case and place another upon the top. This being somewhat elastic, allows for any shrinkage in the fruit, and therefore to a great extent prevents the contents from becoming loose and consequently injured through movement. The pears are wrapped individually in tissue paper and embedded in wood wool so that each pear is separate. In no case does the outside wood come in contact with the fruit. Pears are now shipped in trays made in two sizes—26 by 12½ by 3½ inches, and 23½ by 13½ by 3½ inches. Another tray measures 20 by 15 by 3 inches. In each instance the trays are cleated together to form one package. There is usually plenty of timber suitable for cases in the vicinity of the orchard, various species of eucalyptus furnishing the wood used. An American fruit-packing expert from Seattle (Mr. Samson) has lately been in Australia giving demonstrations of the American system (or that followed in the North Pacific States) of packing apples, and he has just been invited by the Tasmanian Fruit-growers' Union to give demonstrations in Tasmania. Mr. Samson has shown Australian apple growers that by using the American-shaped cases of about equal cubic capacity with their own, not so high, but wider, packing can be done not only in less time on account of greater convenience, but also more apples can be packed to the same cubic capacity and with less chance of bruising. As a result of his visit it seems likely that all Australian fruit growers may adopt uniform shapes in their cases and imitate closely the packing methods in vogue on the Pacific coast of the United States. In the over-sea exportation of Tasmanian fruit a uniform temperature of 33 degrees is maintained for both apples and pears. In the case of pears, shipments are made only on such ships as leave Hobart direct for England with chambers finally closed, so that there can be no change in the temperature.

#### **Seeking New Markets—Spraying Machines.**

In view of the greatly increasing production of apples and pears in Tasmania, considerable effort is being made to find larger markets for the disposal of the fruit, especially on the continent of Europe,

and there has been considerable success in this direction in Germany, Denmark, and Sweden; but an effort last year to ship apples to New York resulted in a loss, partly because of damage in transit from England across the Atlantic and partly because of the tariff duties.

In connection with the Tasmanian fruit industry there is considerable use for American motor spraying machines and also American arsenate of lead for fighting the codling moth, which would otherwise ruin the apple industry. Some of the spraying machines are of local manufacture, as regards the body and also the pump, but are driven by American motors. A picture of such a motor spraying machine in use here with an advertisement describing it is forwarded, also a picture of a motor lorry in one of the apple districts conveying 131 cases of apples from the orchard to the steamer. [These pictures will be loaned to interested firms on application to the Bureau of Manufactures at Washington.]

### GREATER USE OF TYPEWRITERS IN CHINA.

[From Consul General George E. Anderson, Hongkong.]

Importers of American typewriting machines report that recent changes in Chinese political and commercial organization are increasing their sales. There has been a steady increase in the use of typewriters among progressive Chinese business houses for some time and the movement toward modern things generally following the revolution is stimulating the adoption of all such modern business conveniences. Foreign firms in the open ports are also increasing the use of typewriters. Until recently many of them still corresponded in handwriting and it has been difficult to break some of the old and conservative firms away from such methods. However, about 500 typewriters are now in use among such firms in Hongkong at present and at least 450 of these machines are American. Purely Chinese firms are now using perhaps 50 machines and more are being sold daily. Business college instruction in various Hongkong schools is producing a large and increasing force of stenographers among young Chinese and Eurasian people, so that the possible use of typewriters to advantage is greatly increasing.

It is difficult to ascertain the exact importation of typewriters into China. Imports of such machines in the national customs returns are included in other general items. Details of imports of such machines in various ports show importations of typewriters to the value of \$48,112 gold in 1910, of which about 60 per cent go to Shanghai, but these figures are incomplete and the valuation is more or less empirical. It is probable that imports of typewriters into China and Hongkong now reach about \$100,000 annually and are likely to show a notable increase.

### CANNED MEATS IN AZORES.

[From Consul E. A. Creevey, St. Michaels.]

Packing-house products of an English firm are taking the place of many well-known American brands that were formerly sold here. One of the dealers in this line frankly stated to the writer that the goods he is now handling do not equal in quality the American products, but, to use his words, "What are we to do, as we can not get goods direct from America?"

**NATIONAL CHAMBER OF COMMERCE.**

At a meeting of the board of directors of the Chamber of Commerce of the United States of America in Washington, June 4 and 5, the following permanent committees were decided upon: (1) Membership; (2) Membership Qualification; (3) Interstate Commerce, with subcommittees on Federal Regulation, Statistics and Standards, Industrial Workers, Industrial Education; (4) Foreign Commerce, with subcommittees on North American-European Trade, Latin-American Trade, Oriental Trade, Statistics and Standards, Consular Service; (5) Traffic, Transportation, and Communication, with subcommittees on Railroad, Canal and River (interior), Ocean, Post Office, Telegraph, Telephone; (6) Legislation; (7) Currency and Banking; (8) Immigration; (9) Commerical Organization; (10) Publicity; (11) Ways and Means; (12) Auditing.

The bill which was introduced in Congress for the incorporation of this national commercial organization was amended in the House Committee on the Judiciary by the addition of the proviso "That nothing herein contained shall authorize said corporation to engage in business for its own profit." It was then reported favorably to the House of Representatives on June 7 and ordered printed. The following is the form of the bill:

**A BILL TO incorporate the Chamber of Commerce of the United States of America.**

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That Horace H. Allen, Bernard N. Baker, Frederick Bode, A. M. Cooper, C. G. Craddock, A. C. Dixon, John Joy Edson, John H. Fahey, A. B. Farquhar, Everett G. Griggs, H. J. Hodge, P. J. Krusi, I. H. Kempner, B. F. Kauffman, Albert J. Logan, William D. Mullen, Elias Michael, Ludwig Nissen, Francis F. Prentiss, Lewis W. Parker, John P. Truesdell, J. N. Teal, W. B. Thompson, August H. Vogel, Harry A. Wheeler, George H. Whitcher, Harry T. Wickes, and E. P. Wells, citizens of the United States, members of a voluntary association known as the Chamber of Commerce of the United States of America, their associates and successors, are hereby constituted a corporation by that name for the purpose of encouraging trade and commercial intercourse among the States, the District of Columbia, the Territories, and insular possessions of the United States of America and with foreign nations; and for these purposes to have, possess, and enjoy the right to establish and maintain headquarters in the District of Columbia; to own only such property, real and personal, for office purposes, as may be necessary to carry on the work of the corporation; and, in general, to do and perform all things necessary to accomplish the purposes of the corporation: *Provided*, That nothing herein contained shall authorize said corporation to engage in business for its own profit.

Sec. 2. That the right to amend, alter, or repeal this act or any part thereof is hereby expressly reserved.

**INCREASING SOUTH AFRICAN IMPORTS.**

(From Consul E. A. Wakefield, Port Elizabeth.)

The imports at East London for the first three months of 1912 were \$5,063,600, as compared with \$4,459,700 for the same period in 1911. At Port Elizabeth the imports were \$11,240,150, against \$10,527,700. The imports into this consular district constitute 36 per cent of the total imports at the five principal ports of South Africa, including Cape Town, Durban, and Lourenço Marquez, each of which shows a decrease in imports from the corresponding period last year.

The large wholesale houses at Port Elizabeth are keenly alive to the importance of maintaining close trade connections with the interior points, as these returns fully demonstrate. American manufacturers are well represented in the volume of trade, with prospects favorable for a steady and healthy increase.

**SOUTH CHINA ANTIMONY.**

[From Consul General George E. Anderson, Hongkong, supplementing brief articles in *Daily Consular and Trade Reports* for May 28, 1912.]

Apparently the interest in the United States in the export supply of antimony, both refined and regulus and ore, of China has so increased as to take in the possibilities of increased shipments of the various forms of the metal from the South China fields. Inquiries are increasing and shipments from the South China field through Hongkong, while still small, are increasing. Shipments of antimony ore and of refined antimony and antimony regulus from all China in 1910 amounted to 1,082,019 taels in value (about \$680,000 gold), and the average value of shipments for the three years preceding last year was substantially that figure. Nearly two-thirds of these shipments consisted of the refined antimony and antimony regulus. Of the refined and regulus Great Britain took about half, while France imported a third of the remainder, and Germany and Belgium took most of the rest. Of the ore Great Britain took about 42 per cent, France about 22 per cent, Belgium about 12 per cent, the United States about 11 per cent, and other nations the balance. Shipments of all forms of the metal have varied greatly from year to year, however, both in general volume and in the countries of destination. In 1908, for example, shipments of the refined metal and antimony regulus amounted to more than 1,000,000 taels, or more than \$650,000 gold in value, and the United States took about 25 per cent of the whole.

**Source of Supplies.**

Of the shipments during the past three years the great mass has come from the mineral country south of the Yangtze River below Hankow and through the ports of Changsha, Yochow, and Hankow itself. However, during these three years there have been small but increasing shipments both of ore and metal through Hongkong from the mineral district along the West River in Kwangtung and Kwangsi Provinces, centering about Wuchow and including Nanning and Mengtze.

The industry in this part of China has had a somewhat varied development. Shipments commenced several years ago under private enterprise, but soon languished. The provincial government then took the matter up as a government enterprise and imported some mining machinery in 1909 with a view of urging the industry forward. In 1910, however, the industry again returned to private hands, and there has been a slow but steady increase in the output of the mines ever since, the industry being substantially favored by the work of foreign-trained Chinese mining engineers.

**Smelting the Ore—Special Stimulus to Industry.**

About a year ago Chinese exporters concerned in the trade collected a considerable amount of antimony ore and smelted considerable at Wuchow, and some of this stock was sold in the United States. Considerable quantities are said to be on hand at the present time, but owing to recent revolutionary troubles there has been difficulty in moving them. The connections of Chinese producers in the South China field with outlets abroad also are imperfect. The antimony fields in South China, especially along the West River, are said to be

more extensive than the fields in Central China, from which most of the shipments abroad so far have been made, but the development of the iron and steel industry in the Yangtze Valley at and near Hankow has given the production of antimony in that district a special stimulus and has taught producers something of business in the metal which the producers and possible producers in South China so far have lacked. At present the production of the refined metal and regulus in South China is confined almost entirely to Chinese firms in Wuchow which export through Hongkong middlemen. The metal and ore can be bought on commission in the Hongkong market through import and export houses generally. Direct trading from producers to consumers in the United States may be possible, but it will require investigation and approved credits. Production at Wuchow at present is practically controlled by an antimony works at Wuchow [address obtainable from the Bureau of Manufactures]. The present price of antimony regulus is about \$16 local currency or \$7.68 gold per picul of 133½ pounds.

### PAPER PULP FROM MANCHURIAN KAOLIANG.

[From Consul Albert Pontius, Dalny.]

Kaoliang, or tall millet, is extensively grown in Manchuria. In fact, it is the staple food of the Chinese and the principal grain feed of the animals. The kaoliang stalk itself plays an important rôle in Manchuria, being put to a great variety of uses. The outer leaf layers are woven into mats, which are so much required in the trade of the country for inclosing ricks and packing loads of grain and beans, and are used for numerous other purposes, such as making baskets, hats, brooms, etc. The stalks are also utilized for fencing, and even in the erection of houses, and, more than all, for fuel.

The central laboratory of the South Manchuria Railway Co. at Dairen (Dalny) made a series of experiments in manufacturing pulp from kaoliang stalks, the results obtained being stated as follows:

Estimating the total area under cultivation within easy reach of South Manchuria Railway stations at 1,060,500 acres, about 424,200 acres (or 40 per cent) are devoted to the production of kaoliang. The total quantity of kaoliang stalks thus produced in a year is, roughly, 1,225,500 tons, of which 980,400 tons are consumed in various ways [as noted above], leaving a surplus of 245,100 tons (or 20 per cent) available for pulp making. The price of kaoliang stalks varies according to the seasons and localities, but generally it is lowest during the winter, when the cartage is comparatively cheap, and the stalks can be bought for about \$2.50 per ton.

#### Ingredients Needed and Results Obtained.

The waste matter contained in the stalks which can not be made into pulp, i. e., the loss in weight during the preparation of the raw material, is 23 per cent of the stalks collected, thus leaving only 77 per cent suitable for pulp.

The amount of caustic soda required for the pulping process, which takes eight hours under a pressure of 65 pounds, is 15 per cent of the prepared stalks; bleaching powder required, 6 per cent of the prepared stalks; sulphuric acid required, 1.8 per cent of the bleaching powder. Result: Pulp obtained, 25 per cent of the original unprepared stalks, or about 34 per cent of the prepared stalks. The pulp thus made is yellowish white. To make it milk white, 14 per cent, instead of 6 per cent, of bleaching powder is required.

The manufacture of paper in this country is largely dependent upon the supply of alkali, which has all to be imported from abroad at present, but the feasibility of the alkali industry in Manchuria is now forming an interesting subject of chemical study on the part of the laboratory. Until this problem is solved satisfactorily, paper making from kaoliang stalks, viewed from a purely commercial aspect, can not be considered as promising.

**NOTES FROM SYRIA**

[From Vice Consul Lorenzo Y. Manachy, Aleppo, May 13.]

**Raisins and Figs.**

The districts of Antioch, Killis, Aintab, and Marash, all in this Province, produce raisins and figs in abundance, and some export thereof is made to Egypt, Austria, Germany, and, from time to time, to the United States. Although the qualities in general are fair, and some among the varieties even as good as those of any other place, the local packing industry is entirely lacking, otherwise greater quantities of figs and raisins could be shipped to the United States. When the packing system is introduced in this country increased facilities for marketing their products will be provided for the proprietors of vineyards and fig orchards.

**Increasing Trade in Pistachio Nuts.**

The foreign demand for pistachio nuts is steadily increasing. Prices have, in consequence, advanced. The batman (7.04 pounds) is now worth in Aleppo and Aintab 65 or 66 current piasters (\$2.25 or \$2.28). For shipment to the United States they are generally packed in tin boxes after having been salted and roasted.

Proprietors in the producing centers, encouraged by the excellent income given by the pistachio trees, are planting new trees. The pistachio tree grows as large as an ordinary olive or apple tree and has a very long life, but does not come into bearing until the eighth year. The value of pistachio nuts exported to the United States in 1909 was \$78,950; in 1910, \$106,800; in 1911, \$102,200.

**Tobacco Culture.**

The higher regions in this Province are well adapted for the culture of the tobacco plant, and this industry could be developed profitably in several localities were it not for the restrictions imposed by the Régie des Tabacs de l'Empire Ottoman (Government monopoly). Whereas in the bordering Province of Lattakea cultivation of tobacco is encouraged to the point of constituting one of the principal resources of the natives, the Vilayet of Aleppo produces only a portion of the tobacco needed for local consumption.

In the district of Aintab a very strong quality of tobacco is raised and exported to Egypt. Last year a shipment of this quality was made to the United States and there is some hope that this trial will attract further orders. It is said that the Aintab tobacco can be used advantageously for cigar filler.

**Hand Embroideries.**

The manufacture of embroideries and embroidered linen handkerchiefs is rapidly developing. A few years ago these articles were sent exclusively to the United States, whereas now important shipments are made to several countries in Europe.

This industry owes its revival after the events of 1896 to the initiative, zeal, and philanthropic sentiments of two members of the American mission, Mrs. Shepard, wife of Dr. Shepard, head of the American Hospital in Aintab, and the late Miss Corinna Shattuck. This industry, starting from Aintab, the headquarters of the mission, has rapidly spread to the other cities, towns, and villages of the Province, and now constitutes a means of livelihood for thousands of women and girls.

**Syrian Wool for the United States.**

The new wool clip has begun, and it is supposed to be fair. Prices have within the last few weeks advanced 7 to 8 per cent on account of orders passed by firms in Beirut to their buying agents here. It is calculated that four-fifths of the Syrian wool is bought, either directly or through London and Marseille firms, by the United States. The value of wool shipped to the United States in 1909 was \$513,060; in 1910, \$131,045; in 1911, \$508,670.

The wool exported from here is generally washed in cold water and packed in hand-pressed bales weighing 110 to 130 kilos each (242.5 to 286.6 pounds). It is sold under two denominations, the Aleppo and the Orfa, the latter being considered a little superior to the former and invoiced a little higher. The two qualities are used in the United States especially for manufacturing carpets and mattresses. The wool can be bought in Aleppo with a guaranteed yield of 90 per cent, according to the Marseille testing system.

**A Possible Opening for American Flour.**

Flour from different countries is now sold on the Aleppo market, and its importation will very probably continue and increase. The opportunity is perhaps offering for American millers to try the introduction of their products not only in the Province of Aleppo but also all over Syria. Lately an American firm sent to some commission houses in Aleppo small samples of flour of different grades with quotations per carloads f. o. b. New York. The packing was mentioned as being in barrels. It seems that no order whatever has been given to this American firm, because the shipment in barrels was found inconvenient and inadequate and the minimum order (a carload) too large for a flour which has not yet been tried by the local consumers.

Roumanian, French, and Russian houses do not hesitate to accept orders for 10 to 50 sacks. American millers wishing to introduce their brands on the Syrian markets should in the beginning accept small orders and arrange to give quotations c. i. f. Syrian ports for flour packed in double sacks (the inner one fine jute) and weighing exactly 100 kilos (220.46 pounds), which weight is the regular one supplied by European concerns.

**Crop Outlook—Banking and Financial Conditions.**

Until the last of March the grain crops were very promising all over northern Syria and Mesopotamia, but needed a final good rain. Unfortunately, however, during the first half of April no rain fell and an exceptional heat prevailed. This has caused much damage to the country, and the prospects for the excellent crops which existed for this year have vanished and the outlook now is for only mediocre yields.

Besides the Imperial Ottoman Bank and the Deutsche Orient Bank, which have regular branches, several other well-known banks have correspondents in Aleppo, among whom could be cited the following firms: Rizcallah N. Gazale, Nametallah & Desiree Homsy, Nasri P. Homsy, Albert Homsy, Joseph Assouad & Frères, and Zollinger & Co. The present war has somewhat affected this place, but no failures of any importance have occurred, and so far the situation looks financially healthy.

**CURACAO TRADE NOTES.**

[From Consul Elias H. Cheney, Curacao, Dutch West Indies.]

**Motor Line—Automobiles—Steam Roller.**

The new motor car tramway, recently inaugurated, is operating successfully and giving great satisfaction; it is 1-meter gauge, with 60-pound rails (from Germany), with gasoline motor cars (from England) seating 30.

Curacao imported two \$1,000 automobiles from the United States in 1910, about four since then, and it is said that a few more will come—motors of moderate price and speed. The roads are good, but few can afford automobiles. The Curacao Automobile Co. announces that it will start a public service at \$2 per hour.

A new steam road roller, made in England because no American maker quoted satisfactory price, has been successfully remodeling the streets of Curacao for about three months, marking a long-desired improvement. The old coral-rock paving stones are being taken up, crushed, and used for macadamization. The streets of the whole business part of the city will thus be made over.

**Phosphate, Sisal, and Ostrich Enterprises.**

An American company has taken option on the extensive Maal phosphate lands in Curacao, at \$60,000 and a royalty of 25 per cent on profits. The American who arranged it has gone to Seattle to complete arrangements, expecting to take possession and begin operations before December 1.

The sisal-growing experiments in Curacao are promising, especially as the young plants have done well through the longest dry weather the islands have known. Rainfall for 15 months ended May 31, 1912, was only 8.9 inches. From the 10,000 plants set out by the Government three years ago sisal of excellent quality has been cut. The success of this experiment led to the formation of the First Sisal Culture Co., of Curacao, capital \$62,000, financed in Holland, and represented here by C. S. Gorsira, American vice consul. The Government has loaned to the company \$12,000, payable in profits, and a 2,000-acre plantation has been leased, for which 320,000 plants have been purchased, one-half each from Trinidad and Surinam. Plantation labor costs only 30 cents per day for able-bodied men, down to 10 cents for boys. If sisal succeeds, it will become the island's main industry.

A company has been organized, with Dutch and local capital, to establish an ostrich farm in Curacao. It is believed that the climate is adapted to the raising of ostriches. The chief promoter has selected a farm and has gone to Egypt to select birds.

**Panama Commission—Harbor Work—Straw-Hat Industry.**

A Panama Exposition Commission has been organized by business men of Curacao. H. P. de Vries is president and H. J. C. Henriquez secretary. The object is to interest the colony in the opening of the canal and the ceremonies in connection therewith, and to point out what advantage Curacao may hope to realize. It is hoped, labor being cheap, that many vessels can be induced to coal and water here.

The work of widening St. Anns Bay, the entrance to Curacao Harbor, is soon to commence. The width will be increased from 180 feet to 263 feet, by a corps of Army engineers, which will greatly aid the passage of vessels.

During the first quarter of 1912 Curacao exported 30,692 dozen jipijapa straw hats, invoiced at \$91,126. The increased sale over previous years is due to great improvement in their quality, wrought by the colonial government school of instruction, whose director visits homes all over the island, instructing the braiders. He spent some weeks in Venezuela, whence the straw comes, looking after improvement of the straw, and several weeks in Porto Rico, studying the best methods of hat making. The hat business of Curacao has been greatly improved in the last 18 months. Many parties have been here recently from New York to investigate it.

### PENGUIN-OIL INDUSTRY AT MACQUARIE ISLAND.

[From Consul Henry D. Baker, Hobart, Tasmania.]

What is probably the most southerly industry of the world, is being carried on at Macquarie Island, about halfway between Tasmania and the Antarctic Continent, in the capture of penguins for their oil. Macquarie Island belongs to the State of Tasmania and has an area of about 25,000 acres, being about 25 miles long and 5 miles wide. The island is leased by the Tasmanian Government to Mr. Joseph Hatch, who has established a penguin oil industry there. Recently meeting Mr. Hatch, I obtained the following particulars from him.

There are probably 80,000,000 penguins on the island, so that the stock to be drawn from seems almost limitless. There are also a large number of sea elephants about the shores of this island. The oil is obtained from the penguins by boiling the carcasses in digesters capable of dealing with 800 birds at a time. The tops of the digesters are fastened down and steam applied until about 25 pounds pressure is obtained. The steam is then turned off and water pumped into the bottoms of the digesters, this causing the oil to rise, when it is taken off the top by a tap.

The oil is placed in barrels and sold to binder-twine makers in Australia and New Zealand. There is a good market for all the oil that is produced here, but the industry has met with several severe losses through wreck of ships attempting to visit the island. There is no harbor about the island, so that vessels have to lie about half a mile off the rocky coast, and all material has to be conveyed to and from the shore on rafts formed of casks. Owing to the roughness of the open roadstead, it is impossible to obtain insurance for vessels trading there.

Macquarie Island is about 750 miles southeast of Hobart. The island is barren, being covered only with tussocky grass. Whaling ships visiting there have introduced rabbits and Maori hens, which are now quite prolific. The Mawson Antarctic expedition from Australia has established a wireless station there, and daily messages are now being received at Hobart. It was the intention of this expedition to use Macquarie Island as a means of sending messages all the way from their base at Adelie Land to Hobart, but unfortunately the wireless station established at Adelie Land has been unable to communicate with Macquarie Island, owing, it is supposed, to being too near the magnetic disturbances caused by the proximity of the south magnetic pole. The station at Macquarie Island, however, has already proved of considerable value to shipping in Australian waters by giving warning of storms coming up from the south.

**FLOUR TRADE OF SOUTH AMERICAN WEST COAST.**

[From Consul General W. Henry Robertson, Callao, Peru.]

There are about 9 flour mills altogether in Peru, 1 in Callao (the largest), 5 in Lima, 1 in Trujillo, and 2 in Arequipa. Very little wheat is grown in Peru, so that practically all of that made into flour is imported. In 1907 about 100,000,000 pounds were brought in, having a valuation of about \$1,200,000, according to the official statistics. Of this latter amount, Australia furnished about \$900,000, Argentina \$70,000, Chile \$50,000, and the United States about \$80,000. In 1908 about \$50,000 more was imported, of which Chile furnished some \$750,000, Australia \$170,000, and the United States about \$250,000. In 1909 about \$1,300,000 worth of wheat was brought in, of which Chile furnished about \$600,000, Australia about \$430,000, and the United States about \$200,000.

In 1907 about \$50,000 worth of wheat flour was imported into all Peru, of which the United States furnished about \$46,000 and Chile nearly all of the rest. In 1908 about \$60,000 of flour was imported, of which the United States furnished about \$35,000 and Chile about \$20,000. In 1909 about \$70,000 of wheat flour was imported into all Peru, of which the United States furnished about \$55,000, Chile about \$5,000, and Great Britain about \$4,000. The number of pounds of flour imported in 1907, 1908, and 1909 was, respectively, about 2,500,000, 2,800,000, and 3,200,000.

The Peruvian import duty on wheat of all kinds is 1½ centavos per kilo, while that on wheat flour is 4 centavos per kilo. A surtax of 10 per cent should be added to the above rates. A kilo equals 2.2046 pounds and a centavo about one-half of an American cent. While it will thus be seen that the Peruvian flour mills have strong protection in the shape of an import duty of about 2 cents American currency per kilo, or a little less than 1 cent per pound, on flour, American flour of certain quality will sell here with the proper effort. [A special list of Peruvian purchasers of flour may be had from the Bureau of Manufactures.]

[From Consular Agent George D. Hedican, Esmeraldas, Ecuador, May 18.]

**Prices and Shipping Route.**

Flour is selling here at \$6.40 per sack of 100 pounds. This includes about \$1 profit per sack. Shipments via New Orleans and United Fruit Line to Colon are more direct than via New York. In addressing local buyers of flour, quote price per sack delivered on board in Esmeraldas. Chicago firms quote and sell lard in that way. [A special list of flour importers at Esmeraldas is available from the Bureau of Manufactures.]

Sales of flour from the United States to the various countries on the west coast of South America during the past five fiscal years have been as follows:

Country.	1907	1908	1909	1910	1911
Bolivia.....	\$2,744	\$2,803	\$439	\$14,085	\$83,072
Colombia.....	165,087	201,360	182,237	148,404	122,222
Chile.....	280,102	290,000	4,065	20,068	67,172
Ecuador.....	283,894	207,065	247,797	286,138	315,898
Peru.....	322,849	311,482	235,966	494,110	770,064
Total.....	1,064,376	722,970	670,504	971,805	1,358,328

## EXPORT TRADE OF STRAITS SETTLEMENTS.

[From Vice Consul General D. Milton Figart, Singapore.]

In the following table of exports from the Straits Settlements during the first quarter of 1911 and 1912 the 1912 values for the United States are those of the invoices declared at the Singapore consulate general; other figures are taken from chamber of commerce reports:

Articles.	United States.			Great Britain.		Continental Europe.	
	1911	1912	1912	1911	1912	1911	1912
	Long tons.	Long tons.	Value.	Long tons.	Long tons.	Long tons.	Long tons.
Cloves.....	36	41	\$12,812	13	31		
Coffee.....	2½	10	3,861			36	96
Copra.....	241	106	11,520	955	401	15,432	13,063
Cutch.....		180	19,867

¹ Cases; not included in total.

The principal increases in exports to the United States are noted in gambier, gum copal, gum dammar, jelutong rubber, and Para rubber; while large decreases are noted in sago flour, tin, and, as usual, in pineapples. The increase in shipments of pineapples to Great Britain and the Continent would indicate that acreages which have been freshly planted since the reaction after the rubber boom are gradually coming into bearing.

*British commercial commissioner in Honduras.*—Consul Arminius T. Haeberle reports the arrival in Tegucigalpa of the special commissioner of the Commercial Department of the British Government to Central America, Colombia, and Venezuela, who is touring those Republics to gather statistics and foster trade.

**SPRAYING MATERIALS IN CANADA.**

[From Consul Fred C. Slater, Sarnia, Ontario.]

In this section of Ontario a great deal of insecticides is used in spraying orchards and also wheat for the prevention of smut. Formaldehyde is chiefly used for the latter, part of which is manufactured in Canada, and I believe some is imported from Germany.

For orchards farmers usually make their material for first spraying by boiling to a liquid sulphur and lime, which can be made in large quantities quite cheaply; but prepared products are on the market for which the dealer pays \$5 to \$6 per barrel. One American chemical company has a product which it is pushing in this part of Ontario. The largest producer of these commodities is a chemical, iron, and lumber company of Toronto, which has some nine branches established over the Dominion. It manufactures a large number of by-products in connection with the lumber business, among which are insecticides. The Fruit Growers' Association of St. Catharines, Ontario, is extensively in the field in the way of selling fruit trees and incidentally takes orders for spraying material.

I am informed that arsenate of lead is used extensively for second spraying, which costs the dealer 7 to 12 cents per pound. A combination is also used, consisting of 4 pounds of sulphate of copper, 4 pounds of lime, and 4 ounces of Paris green, producing about 40 gallons of material.

These commodities are said to be sold on a very small margin and are carried by most drug stores merely to draw other trade. Most fruit handlers likewise carry them. [The consul prepared a list of dealers in Ontario through whom insecticides could be sold. This list is procurable from the Bureau of Manufactures at Washington.]

---

**CARAWAY SEED IN HOLLAND.**

[From Consul Frank W. Mahin, Amsterdam.]

Caraway seed is extensively grown in this country. Groningen, in the northeast corner, produces more than any other Province, next being North Holland, in which Amsterdam is situated. In these two Provinces more than half the caraway-plant acreage is found. In the whole country, in 1909, the number of acres devoted to caraway growing was 17,579; in 1910, 19,010; in 1911, 20,337.

The average yield per hectare (2.471 acres) was 24.1 bales of 50 kilos (110.23 pounds) each in 1909, 23.3 bales in 1910, and 27.3 bales in 1911. The large yield in 1911 is particularly noteworthy and interesting because that was a year of remarkable drought.

The total yield of caraway seed in 1909 in this country was roundly 18,865,000 pounds; in 1910, 19,800,000 pounds; and in 1911, 24,700,000 pounds. The declared value of the exports of caraway seed to the United States from this district in 1909 was \$115,611; in 1910, \$82,247; and in 1911, \$92,663. [The statistics of American imports of caraway and other seeds were given in Daily Consular and Trade Reports for May 18, 1912.]

Caraway seed is used for flavoring, and also, perhaps less extensively, as a carminative. It is employed by confectioners, distillers, and perfumers in the preparation of liquors, cakes, sweetmeats, scented soaps, etc. It depends for its aromatic properties on a volatile oil, which is obtained by bruising the seeds and distilling them in water.

## CANADA'S USE OF TIGHT-COOPERAGE STOCK.

[From the Monetary Times.]

As tight-cooperage barrels are used in shipping beverages, oils, and other liquids, the stock is required to be clear and of a species which will not impart a resinous or other flavor to the contents. For these reasons oak, preferably white, is the principal wood used by the trade; and as this species can not be obtained in Canada, the large shippers import it either as staves or in the log from the United States. In the latter country, however, gum and basswood are rapidly taking the place of oak in sawed tight cooperage, so that in a short time a change in the woods used in Canada may be looked for.

Tight-cooperage staves reported in 1910 amounted to 8,379,000 pieces, worth \$272,924. Of this amount 7,137,000 pieces were sawed staves; ale and beer staves numbered 923,000; bucked and split staves to the number of 319,000 made up the balance. Oak formed more than 63 per cent of the total, over 5,300,000 staves being produced; spruce, 8 per cent; gum, 6 per cent; ash, about 4 per cent; the remaining species (basswood, birch, elm, fir, pine, balsam fir, cedar, and cypress) were used in varying small quantities.

Although the quantity of sawed tight cooperage reported in 1910 was considerably less than that in 1909 the total value was \$53,590 more; this was due to the increase of over \$10 per thousand in the average price. The average price in 1910 of \$27.43 per thousand was \$6.67 more than that paid in the United States for 1909, owing to the large proportion which oak forms of the Canadian total and to the fact that this species is United States wood with transportation charges added. The increase in the 1910 Canadian price is seen in all the species except oak and cedar. The price of the former, \$29.31 per thousand, is \$6 less than in 1909, but its larger use more than made up the difference, and brought up the total average. The greatest advance is seen in the price of Douglas fir, which, at \$35, more than doubled its 1909 price. In 1910 balsam fir was the cheapest wood at \$10 per thousand pieces, and cypress the most expensive at \$60.

[American official records show the following exports of staves from the United States to Canada in the fiscal years ended June 30: 1907, 6,298,178, value \$231,367; 1908, 7,350,380, value \$274,803; 1909, 5,167,214, value \$149,085; 1910, 7,560,404, value \$192,540; 1911; 10,686,036, value \$252,623. The species of wood represented by these totals are not separately stated in available data.—B. of M.]

## AUTOMATIC TARGET INVENTION.

[From Consul General John L. Griffiths, London.]

An invention attracting considerable attention in the United Kingdom is an automatic recording target which shows on an indicating instrument at the firing point the precise point on the target hit by each shot fired. A London newspaper claims that—

By the use of this apparatus the employment of markers at the ranges may be entirely dispensed with, thus effecting a considerable saving in expense, as well as giving the marksman an almost instantaneous reproduction of his shot on the dial by his side. It is applicable to ranges of practically any size—from 25 to 2,000 yards—and to both stationary and moving targets, with any scenic surroundings that may be required. As a moving target, not only the actual hits are recorded on the indicator but also the misses (in advance, above, below, or behind the moving figure aimed at), and the marksman is able to rectify his mistakes at once. The target is also adaptable for naval use, so that crews need not come ashore to practice musketry. On a target 2 feet square upward of 147,450 shots can be recorded. The invention has been seen in operation by several well-known military experts, who have expressed themselves as being greatly impressed with it.

Consular Agent E. M. Lawton, of Oaxaca city, states there is a local band in almost every Mexican town or village of any size in the State of Oaxaca. However, no attempt is made to uniform them, except the military and regimental bands of the capital city.

**CHILEAN MINERAL DEVELOPMENT.**

[From Consul Alfred A. Winslow, Valparaiso.]

The completion of the Longitudinal Railway from Santiago to Iquique promises much for the mining interests in the north of Chile. The work is progressing rapidly and should be completed by 1914, when a large section of rich mineral lands will be provided with good transportation facilities. The following quotation, taken from the South Pacific Mail, of this city, gives the views of one well informed from personal observation and investigation:

Mr. Arthur MacDonald, the Canadian engineer connected with the Northern Longitudinal Railway, prior to his recent departure for Europe expressed himself most emphatically on the great possibilities for industrial development in northern Chile. In his opinion the copper mines which abound in the Province of Antofagasta will necessitate the construction of at least one smelting establishment in Antofagasta, and probably two later, as the service of the Longitudinal Railway will insure the carrying of ore to the coast. All the mine owners are anxious that smelting works be established, to enable them to sell their ore at prices equal to what they would receive in European markets. He further asserts that there are now sufficient nitrate grounds to warrant the working of 10 more large oficinas.

American interests are now examining mining properties in that section of the country, and it might pay others to secure some of what is said to be equal to any copper deposits yet discovered.

**CHINA LOWERS TELEGRAPH RATES.**

[From Consul General Samuel S. Knabenshne, Tientsin.]

The Chinese Government has announced a sharp reduction in telegraphic rates within China taking effect on June 1, 1912.

Messages in Chinese cipher, or in any foreign language, will be transmitted between any two points in China at the uniform rate of 12 cents Mexican per word, equivalent to 5½ cents gold. Ordinary Chinese messages and foreign press messages will be transmitted at 6 cents Mexican per word (2½ cents gold), and Chinese press messages at 3 cents Mexican (1½ cents gold) per word.

Telegrams transmitted between two points within the limits of the same Province will be charged as follows: Chinese cipher or foreign messages, 6 cents Mexican (2½ cents gold) per word; ordinary Chinese and foreign press messages, 3 cents Mexican (1½ cents gold) per word; Chinese press messages, 1½ cents Mexican (7 mills gold) per word.

**JACKS FROM WESTERN ASIA.**

[From Consul Emil Sauer, Bagdad, Turkey.]

Kentuckians seek information in regard to the character of jacks to be found in this district. It would not be profitable to come here for the purpose of buying. The jacks here are almost all of a very small species. Larger and better developed jacks are raised in large numbers at El Hassa, on the Persian Gulf side of Arabia. These could be shipped from Bahrein (Islands), which has steamship connections with India and Europe. The jacks found at El Hassa are of good size, 4 to 4½ feet high, and range in price from \$35 to \$53 per head. A better type of jacks is also found at Maskat, Arabia, in Palestine, and in Syria.

## SOUTH AFRICAN NOTES.

[From British and South African Export Gazette.]

*Two new large tanneries* are likely to be started in Natal in the near future.

*Sanitation.*—An Association of Sanitary Inspectors for South Africa has recently been formed at Johannesburg.

*An electric lighting scheme* for Matatiele, East Griqualand, will probably be undertaken when the new waterworks are completed.

*Machine tools.*—We have information that the Johannesburg municipality is in the market for a number of machine tools, including lathes, circular and other saws, screwing machines, mortising and boring machines, and air compressors.

*Public works,* such as an agricultural station, hospitals, a light railway, etc., will be carried out shortly in the Lourenço Marquez and Inhambane districts, as the result of the Portuguese Government's decision to devote 12 per cent of the land tax to local development works.

*Waterway traffic.*—The first attempt to exploit the great waterway of the Zambesi is being made with a number of lighters built by the Bulawayo firm of Dechow & Tweedale. If successful the results will be of the highest business importance by the opening up of new native markets and a great trade route.

*Coal-handling plants.*—Valuable contracts will shortly be on offer as the result of the decision to improve the coal-handling plant at Durban at the cost of \$321,000. We are informed that an order for a coal-loading plant is to be placed by the Portuguese Government for Lourenço Marquez, the cost being estimated at \$100,000.

*Electric plant.*—The Cape Town municipality is about to extend its electric lighting works, and also to purchase the interests of the Cape Peninsula Lighting Co., for which a loan of \$350,000 is being raised. An economizer, steam turbine, transformers, cables, and switch gear are about to be imported for the Cape Town municipality.

*Railways.*—The recent South African Railway loan estimates presented to Parliament show a contemplated expenditure of \$10,000,000 on new lines. Important orders for rails and other railway material for strengthening main lines and relaying branch lines are about to be placed by the South African Railways Administration, the total cost of the work being given at \$1,688,000.

*A trackless tramway system* has been recommended for installation by the Germiston municipality by Mr. H. N. Thomas, general manager of the Durban tramways. The total route suggested is 6½ miles in length, and the capital outlay would be \$200,000. An experimental mile of trackless tramways is to be constructed at Aberdeen, Cape Province; only two cars will be purchased at first.

*Gas appliance sales* are making headway at some Cape centers in spite of the popularity of electricity. For instance, the Cape Town and District Gas Light & Coke Co. (Ltd.) last year laid 300 yards of new mains and 276 new services, fitted 458 new prepayment installations, 404 additional cookers, 73 geysers, 3 heating stoves, and 3 radiators. The South African Lighting Association (Ltd.) also reports only a small decline in gas consumption at Port Elizabeth, while at Grahamstown there has been a satisfactory advance.

*Mining machinery.*—(1) The importation of a complete plant of larger capacity than that at present installed, and specially designed to deal with pyritic ore, is under consideration for the Mali Dyke gold mine, Pilgrim's Rest district, Transvaal. (2) Orders will shortly be on offer as a result of the decision to make certain considerable additions to the plant of the Transvaal Coal Trust Co. (Ltd.). (3) The purchase of a small mill for the Felixburg Claims property of the Rhodesia Gold Mining & Investment Co. (Ltd.) is under consideration. (4) In connection with the important additions to the reduction plant of the Cinderella gold mines, Transvaal, which are to be undertaken, some valuable orders will shortly be on offer. (5) A complete new mill is required for the Mystery gold mine, Rhodesia. (6) Orders will shortly be distributed in connection with the additions to the reduction plant of the Sabi gold mine, Rhodesia, which have been decided upon. (7) Orders are to be placed for large additions to the concentrating plant of the Messina copper mine, Transvaal. (8) A large treatment plant, with a capacity of 15,000 tons per month, is to be imported for the Cam and Motor gold mines, Rhodesia. (9) Orders for additional plant for the cyanide equipment of the Benoni Consolidated gold mine may be anticipated in the near future.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying to addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 9076. Gas engines.**—An American resident in an important coffee-growing country in which there are many small holders of from 5 to 15 acres, with a view to establishing agencies, writes the Bureau of Manufactures that he desires to be supplied with terms, catalogues, styles, and prices of light, durable gas engines, fixed and portable, of standard make, from  $1\frac{1}{2}$  to 10 horsepower. These engines should be suitable for running coffee pulpers, capping machines, pumps, circular saws, etc. He writes that he is willing to furnish satisfactory references.
- No. 9076. Timber and woods of various kinds.**—An American consul in a Mediterranean country reports that a local merchant and commission agent desires to be placed in communication with American exporters of common timber, mahogany, oak, teak, pitch-pine, and other woods. Correspondence may be in English, and prices should be quoted c. i. f. city of destination, if possible.
- No. 9077. Timber proposition.**—A report has been received from an American consular officer in Russia containing a copy of a communication from a resident of that country in which he requests to be placed in touch with American capitalists and others who might be interested in timber propositions which are described in the communication. Copy of the complete report will be sent to interested persons by the Bureau of Manufactures.
- No. 9078. Tenders for Government transport.**—The American consul at Montevideo, Uruguay, reports that a call for tenders is now appearing in the *Diario Oficial* for a marine transport for the Government of Uruguay, the plans and specifications for which may be seen at the Ministry of Public Works, Montevideo. Tenders will be received until July 26, 1912.
- No. 9079. Corn.**—An American consul reports that two commission merchants in a European city of 160,000 inhabitants desire direct connections with American exporters of corn. They will correspond in English, and offer to furnish references.
- No. 9080. Lard.**—A report from an American consul in a European country states that commission merchants and agents in several large cities of his district desire connections with American exporters of lard. Correspondence may be in English.
- No. 9081. Fruits.**—Several commission merchants in Germany have informed an American consulate that they wish to hear from exporters of fresh and dried fruits in the United States. Correspondence is preferred in German.
- No. 9082. Ice breakers.**—The American consul general at Tientsin, China, has forwarded copies of the specifications for two ice breakers, which are required by the Haiho Conservancy Commission of that city, to be used in keeping the Haiho (river) open from Taku Bar up to Tongku, whence there is railway communication with Tientsin. Tenders must be in the commission's office by August 26, 1912. Specifications referred to will be loaned to interested persons by the Bureau of Manufactures.
- No. 9083. Canned fruits.**—An American consular officer in a Mediterranean port writes that an importer of canned goods would like to import directly from manufacturers. At present he is receiving consignments of canned fruits from England and other European countries, but he is especially desirous of importing American canned peaches, pears, plums, and pineapple.
- No. 9084. Coal and other products.**—A request has been received at an American consulate to put the inquirer in touch with American shippers of bituminous coal. The consul states that this person has special facilities for securing contracts with the Government railroads and the navy. During recent conversations he has shown great interest in the increased sale of American goods, and has expressed a desire to represent American houses that deal in articles purchased in quantities by the local Government. The consul believes he would make an excellent representative for American houses interested in the proposition.

## TRADE AND INDUSTRIES OF NOVA SCOTIA.

[By Consul General James W. Ragsdale, Halifax.]

Commercial and industrial conditions in the Canadian Province of Nova Scotia during 1911 were satisfactory. The coal production reached high-water mark, and the output of the fisheries was fully up to expectations. Money was plentiful for all legitimate enterprises, the manufactories increased their output, labor was plentiful and free from strikes, and the export trade largely increased over 1910.

The value of improvements in the Province exceeded that of 1910 by nearly \$1,000,000, and there were fewer failures than for many years previous, while the sum total from all sources surpassed that of 1910 by more than \$5,000,000. The only declines reported for the year were in lumber and agriculture, but in these the increased prices and the unprecedented apple crop made the losses small in comparison. The value of all productions in the Province for the year was as follows: Farm and live-stock products, \$25,699,900; mining, \$38,161,303; forest, \$5,000,000; fisheries, \$10,119,243; manufactures, shipping, and freights, \$45,500,000; total, \$124,480,446.

### Fishery Products.

Nova Scotia is noted for its fisheries, and in this industry leads all other Provinces of the Dominion. The total catch in all Canada for 1911 was valued at \$29,965,433, an increase of \$2,342,236 over the preceding year. Of this total, Nova Scotia supplied \$10,119,243, and \$2,038,131 of the increase. In the Nova Scotia industry there were employed 1,680 vessels and tugs and 38,977 boats, the whole being manned by 68,610 men. Besides, 24,978 persons were employed in the various canneries and fish houses on shore. The exports of fish from the Province to the United States last year were valued at \$1,618,324 compared with \$1,298,299 for 1910, fish products \$44,894 against \$30,419, fresh lobsters \$137,950 against \$106,728, and canned lobsters \$163,828 against \$209,553. Fish to the value of \$310,158 were shipped to Porto Rico and \$16,458 worth to Hawaii.

**Acres, Yield, and Value of Crops.**

There were disappointments in the agricultural industry due principally to the drought in the early summer. The acreage planted was only about two-thirds of that in the preceding year. The immense apple crop and the higher prices received for the other productions helped out in the money total, leaving a shortage as compared with 1910 of only \$4,719,661. The acreage planted and yield for 1911 and value of crops for 1910 and 1911 in the Province according to the best obtainable information were as follows:

Crops.	Acreage, 1911.	Yield, 1911.	Value.	
			1911	1910
		<i>Bushels.</i>		
Apples.....		1,700,000	\$3,000,000	\$900,000
Barley.....	6,361	164,000	130,000	192,000
Beans.....	986	21,000	43,000	130,200
Buckwheat.....	7,904	172,400	121,000	243,000
Corn for husking and fodder.....	164		28,000	100,625
Garden truck.....			1,200,000	1,800,000
Hay and clover.....	412,864	1,706,000	8,472,000	10,129,230
Live-stock products.....			6,500,000	7,000,000
Mixed grains.....	11,669	343,200	241,000	300,000
Oats.....	84,409	2,471,000	1,307,000	2,775,100
Peas.....	195	4,600	7,000	47,250
Potatoes.....	26,596	4,884,000	2,930,400	5,096,000
Spring wheat.....	9,917	208,800	280,000	551,106
Rye.....	963	15,400	14,600	( <sup>1</sup> )
Turnips.....	10,323	4,399,000	1,475,000	1,158,000
Total.....			25,660,900	30,419,561

<sup>1</sup> Tons.<sup>2</sup> Not reported.**Increased Output of Minerals.**

There are but few countries where as many minerals are mined as in this Province. Until late years, however, slow progress was made, the lack of capital and labor strikes being the chief impediments. These obstacles being overcome, wonderful advancement was made in 1911. There was an increase of \$9,730,001 in the value of the output of minerals mined in the Province last year compared with 1910. Gold, limestone, grindstones, and gypsum are largely exported to the United States, the shipment of the latter last year being valued at \$303,569.

The value of the minerals and mineral products of Nova Scotia for 1910 and 1911 was as follows:

Products.	1910	1911	Products.	1910	1911
Antimony.....	\$32,000	\$30,569	Ingots.....	\$3,198,260	\$14,500,000
Bricks.....	143,000	162,159	Iron ore.....	92,190	93,791
Building stone.....	200,000	315,000	Limestone.....	483,100	525,288
Coal.....	15,675,000	17,600,000	Manganese.....	1,500	9,000
Coke.....	1,720,084	2,200,000	Molding sand.....	720	1,520
Drain pipes.....	97,482	143,176	Pig iron.....	1,000,000	1,500,000
Gold.....	202,825	159,411	Scheelite.....	30,000	30,000
Grindstones.....	9,750	11,400			
Gypsum and other minerals.....	484,461	880,000	Total.....	28,431,302	38,161,303

**Lumber and Wood Products.**

Nova Scotia is a large producer of lumber, a considerable share of which is exported to the United States. The largest mills are owned entirely or in part by Americans. The value of the production for

1911, however, fell short of that of 1910 by about \$500,000. Lumber to the value of \$900,753, wood pulp and pulp wood \$217,549, and other wood products \$152,516, or a total of \$1,270,818, as compared with \$1,693,623 in 1910, were exported to the United States. A large quantity of logs was held up for lack of rain in the early spring, and the prospect for a large output in 1912 is excellent. Wood used in the manufacture of furniture, doors, sashes, matches, barrels and tubs, and other wares aggregated in value \$945,780. One great drawback in the lumber trade is the increase in the ocean freight rates.

#### **Commercial Failures—Motor-Car Trade and Industry.**

There was a large decrease in the number of commercial failures of the Province last year compared with the previous four years. The total number of failures last year was 65, against 80 for 1910 and 89 for 1909. The total liabilities amounted to \$269,292, \$447,690, and \$506,208, and the assets \$86,923, \$224,300, and \$191,374 for 1911, 1910, and 1909, respectively. All corporations operating in the Province are required to register annually. The total registering last year was 788, an increase of 44 over the previous year.

The motor car is coming into general use, the total number in the Province at the beginning of the present year being 537, or 75 more than for the same period in 1910. Of the total, 90 per cent are American, 9 per cent Canadian, and 1 per cent European make. A carriage company which commenced building motor vehicles early last year and operating at Kentville, reorganized with a capital of \$200,000 and removed to Amherst. The value of the output of this company for the year ended March 31, 1912, is estimated at \$1,000,000. The principal parts are imported from the United States.

#### **Building Operations—Railway Mileage—Industrial Conditions.**

During last year new buildings were erected in the Province to the value of nearly \$2,135,000 compared with \$1,080,000 for 1910.

The mileage of railways in operation during last year was 1,353.82, an increase of only 3.26 miles compared with the preceding year. Contracts have been awarded for the construction of the Halifax & Eastern Railroad, which, when completed, will add about 165 miles to the railway mileage of the Province.

The manufacturers of the Province had an unusually successful year. Extensions to plants and new industries are reported all along the line. The output was increased and at the close of the year but little stock was left in the warehouses. The prices obtained were good and collections far better than in most previous years.

#### **HALIFAX.**

(By Consul General James W. Ragsdale)

The city of Halifax is the manufacturing, wholesale, financial, and educational center of the Province of Nova Scotia. Its harbor facilities are among the best on the Atlantic seaboard, and the trade of the port is rapidly growing, last year surpassing all previous records.

The merchants report an increase of at least 30 per cent in the sales over 1910, with a slight loss in collections, while the manufacturers report even greater prosperity. The output of the manufactories,

including the fish products, will exceed in value \$20,000,000, compared with \$18,240,000 for 1910. The car works greatly increased their output, and have orders for months in advance.

#### Banking and Business Conditions.

The bank clearings for 1911 amounted to \$87,994,000 as compared with \$95,855,316 in 1910. The decrease may be accounted for by reason of the consolidation of two of the largest banks in the city. One of the principal banks declared a dividend of 13 per cent and another 14 per cent. All the banking institutions here report the business tone of the city sound and healthy. Never have the payments and remittances been so satisfactory. The small traders without capital, who are obliged to engage in a credit system with customers who are constantly shifting from one town to another, and so losing entire debts, are being weeded out, and thus the wholesale houses are becoming better protected.

There were only 11 business failures in Halifax during last year, the liabilities amounting to \$50,692, with assets of \$8,090.

#### Prices of Commodities in Halifax and Other Cities.

The average retail prices of some of the necessities of life in Halifax as compared with other cities in Canada during 1911 were as follows:

Articles.	Halifax, Nova Scotia.	Montreal, Quebec.	Toronto, Ontario.	Winnipeg, Manitoba.
Bacon..... per pound	\$0.20-0.22	\$0.16	\$0.15-0.20	\$0.27

#### Trade of the Port.

The imports of merchandise into the port increased in value from \$9,356,322 in the fiscal year ended March 31, 1910, to \$9,836,974 in the following year, and the exports from \$11,595,755 to \$12,514,420, respectively. [According to preliminary figures, the total imports for consumption into the port for the year ended March 31, 1912, were valued at \$11,512,546, of which \$7,734,514 represented dutiable and \$3,778,032 nondutiable goods. The exports of domestic products amounted to \$15,467,270.]

Of the imports during the fiscal year 1911, the United States shipped merchandise to this port valued at \$2,158,531, of which \$1,167,995 worth represented dutiable and \$990,536 nondutiable goods, and the imports from the United Kingdom were valued at \$2,872,300, made up of dutiable goods amounting to \$2,124,687 and nondutiable goods \$747,990.

The following table shows the principal imports of dutiable and nondutiable goods into Halifax from the United States and United Kingdom for the fiscal year ended March 31, 1911:

Articles.	From United States.	From United Kingdom.	Articles.	From United States.	From United Kingdom.
<b>DUTIABLE.</b>			<b>DUTIABLE—continued.</b>		
Ale, beer, and ginger ale.....	\$11,313	\$15,500	Vegetables.....	\$19,439	\$12,121

Fresh.....	99,140		
Mackerel, pickled.....	83,211		
Paper.....	56,912		
		Total.....	12,514,420

#### Shipments to United States.

The articles invoiced for shipment to the United States through the American consulate general at Halifax for the calendar year 1911 were valued at \$1,952,810, compared with \$1,618,757 for 1910. This increase was due principally to bonds valued at \$300,078 being declared for shipment to the United States. There was an increase

of \$310,866 in the value of the exports invoiced through the American agency at Lunenburg due to larger shipments of codfish, and the shipments from the agency at Liverpool increased \$78,116, owing principally to larger shipments of wood pulp. The exports from the agency at Bridgewater, however, decreased in value \$179,521, compared with 1910, due to the decreased shipments of lumber. The following table shows the principal items and their value invoiced through the consulate general at Halifax and the agencies at Bridgewater, Liverpool, and Lunenburg to the United States for the calendar years 1910 and 1911:

Articles.	1910	1911	Articles.	1910	1911
<b>HALIFAX.</b>			<b>BRIDGEWATER.</b>

Total.	1,618,757	1,952,810			

Fish valued at \$310,158 was invoiced through the consulate general at Halifax to Porto Rico during last year, compared with \$195,213 worth for 1910. Of the total last year dry codfish represented \$297,584. There was also shipped to Hawaii last year \$16,458 worth of dry codfish, compared with \$10,000 for 1910.

#### Building Operations—Harbor Improvements—Shipping Facilities.

The outlook for building operations in 1912 is said to be much brighter than for last year. Several large contracts have already

been let for new buildings to replace the large number destroyed by the unusual fire of December and January. The cost of these alone will probably exceed the entire building expenditure of 1911.

The freight handled at the piers of the Intercolonial Railway at Halifax during 1911 exceeded that of 1910 by nearly 100 per cent, thus compelling the company to extend its wharves and piers to meet future demands. The expense of this improvement will, it is said, approach \$5,000,000. Five piers will be built of reinforced concrete and creosoted-wood sheathing, all of the most permanent character. Two of these piers will have a length of 800 feet and a width of 235 feet, and will afford three times the present capacity. There will also be changes made in the railway passenger station, and the freight yards will be enlarged to accommodate at least 1,000 more cars than at present.

There arrived at the port of Halifax last year 46,801 immigrants, of whom 43,293 were destined for Canada and 3,508 for the United States.

Halifax as an ocean port has developed wonderfully during the past 10 years. There are 16 steamship services, outside of coastal, in communication with this port. During the winter season 1,000 to 1,200 men are employed on the piers. A fast-line service between Halifax and England is contemplated, the voyage from port to port to occupy four and one-half days. These steamers will be met by fast trains so as to land passengers from London to Winnipeg within seven days. It is also stated in this connection that the Intercolonial Railway is to be double-tracked and that Canadian Pacific trains will run over this line from St. John to Halifax.

The total number of vessels entering the port of Halifax during last year was 1,110 of 1,474,372 tons, of which only 8 steam vessels, of 8,458 tons, and 81 sailing vessels, of 19,855 tons, carried the American flag.

#### SYDNEY.

[By Consul Charles M. Freeman.]

Sydney, with a population of 20,000, claims to be the third city of eastern Canada. Within a 12-mile radius, the estimated population is 75,000, and the capital invested in industries within this radius is over \$100,000,000, the wages paid amounting to some \$12,000,000 a year. Four banks cater to the financial needs of the community and the populace may be reached through the advertising mediums of the daily newspapers and 2 weeklies. During 1911 some 2,000 steamers and sailing vessels, of 1,250,000 tons, entered the port of Sydney.

The coal mines of Cape Breton form a basis for the iron and steel works, and upon these latter depend other large industries. Cement is made from the blast furnace slag and lime, bricks are made from the slag, and tar, other chemicals, and fertilizers are obtained from the waste of the iron works. The 1911 output of the local makers of machinery and metal goods showed a large increase over 1910, and extensions to some of the plants are contemplated. The local electric company, which is owned chiefly by Americans, reported the best business of its history during 1911. Improvements costing over \$150,000 were made to the company's equipment during the past year.

**Coal Output Increased.**

The production of the collieries of Cape Breton during 1911 was greater than during 1910, although work was suspended in some of the mines on account of water or unusual accidents. Outside of the coal used locally, the greater part of the output is sent to Upper Canada, via the St. Lawrence River. During 1911 coal to the value of \$617,172 was exported to the United States.

The following table gives a comparison of the output in tons of the principal collieries during 1910 and 1911:

Company.	1910	1911	Company.	1910	1911
	Tons.	Tons.		Tons.	Tons.
Dominion Coal Co. (Ltd.)...	3,527,000	4,000,000	North Atlantic Coal Co. (Ltd.).....	80,000	92,000
Nova Scotia Steel & Coal Co. (Ltd.).....	815,000	780,000	Port Hood Co.....	75,000	Closed.
Inverness Railway & Coal Co. (Ltd.).....	272,000	280,000	McKay Mining Co.....	25,000	30,000
			Colonial Coal Co.....	16,000	15,000

The decreased output of the Nova Scotia Steel & Coal Co. (Ltd.) was caused by a disastrous explosion at one of its most active collieries in January, 1911, which closed that plant for several months.

One coal company has undertaken the building of a new shipping pier at Sydney, the addition of new cars and locomotives for its road to Louisburg, the construction of a coal washer of the most improved design, and is installing a briquet plant to increase the value of its slack coal. Another company has recently erected a dock-loading plant and pocket of 40,000 tons capacity, with an electric loading belt having a capacity of 3,000 tons per hour.

**Growth of the Iron and Steel Industry.**

The iron and steel companies showed considerable increase in the volume of business done in 1911, compared with the previous year. During the past year the Nova Scotia Steel & Coal Co. installed a quantity of new equipment, including a fluid steel compression plant comprising four hydraulic presses capable of handling ingots of 3 and 5 tons weight, and one hydraulic press handling fluid ingots of 20 tons or more. These presses are of French invention, the first to be installed in Canada. In a new hydraulic-forge building will be placed two presses, one of which will be capable of handling ingots up to 50 tons in weight.

The output of the iron and steel companies of Sydney during 1911 was as follows:

Class.	Tons.	Class.	Tons.
DOMINION IRON & STEEL CO.		NOVA SCOTIA STEEL & COAL CO.	
Coke.....	454,000	Coke.....	97,971
Pig iron.....	272,000	Pig iron.....	84,166
Steel ingots.....	224,000	Steel ingots.....	84,503
Steel blooms.....	280,000	Steel billets.....	78,389
Steel rails.....	137,000		
Steel rods.....	77,000		
Sulphate of ammonia.....	4,000		

According to the statement of the general manager of one of the local steel companies, prices were extremely low during 1911, owing

to the depression in European markets and the demoralization of the American trade during the latter months of the year. Canadian iron and steel makers were forced to meet dumping conditions and reduce prices abroad, or curtail their operations and output. It is estimated that more than half of the iron and steel consumed in Canada is still imported from abroad. Canada is to-day using about 1,750,000 tons of steel annually.

#### **Fisheries.**

Nova Scotia led all the Provinces of the Dominion in the production of fish during 1911, with a total value of \$10,000,000, and Cape Breton contributed its share to this total. The catch prepared for market on Cape Breton during the fiscal year ended March 31, 1911, was valued at \$944,801, the estimated value of the catch when landed being \$737,408. This total was made up of cod, \$283,027; haddock, \$147,179; herring, \$59,005; lobsters, \$250,041; mackerel, \$60,550; salmon, \$29,531, and other fish, \$115,468. The catch for the nine months ended December 31, 1911, was valued as follows: Cod, \$243,459; haddock, \$101,029; halibut, \$9,289; herring, \$32,927; lobsters, \$221,273; mackerel, \$40,378; salmon, \$23,837, and other fish, \$53,787; total, \$725,967. In the fisheries of Cape Breton were engaged 100 deep-sea vessels of 1,975 tons, 2,642 small sail boats, 54 gasoline boats, and, in all the branches of the industry, 6,120 men. Of a total of \$159,166 paid in bounties to fishermen by Canada, the Cape Breton fishers received \$20,447.

The increasing use of motor boats in the shore fisheries is noted as an important development. Several steam trawlers fished from different ports in the district with fair success, and the fleet will be augmented during the coming season. More sea products were exported to the United States during 1911 than usual, as a result of high prices. Several Gloucester firms employed buyers throughout the district, contracting for green salt cod. According to the annual report of the Department of Marine and Fisheries for 1910-11, the total revenue from licenses, fines, etc., in all Canada amounted to \$100,876, of which American vessels contributed \$15,077 as *modus vivendi* fees. This sum was paid chiefly in Nova Scotia ports by vessels from Gloucester and Boston.

#### **Imports into the District.**

The entire value of imports into the Sydney consular district during 1911 was \$2,257,500, of which the United States supplied \$1,108,345. During 1910 the imports from the United States amounted to \$910,159. The articles showing the greatest increase among the imports of 1911 were beer, electrical goods, copper ingots, iron and steel manufactures, machinery, building materials, food supplies, and express and post parcels. Decreases were shown in the imports of chemicals, iron ore, railway supplies, and gasoline engines. The total exports from the Sydney district were valued at \$1,157,831.

Most of the gasoline engines imported were installed in locally built boats, and with the constantly increasing number of motor boats, both for fishing and pleasure purposes, the United States is not getting its share of this trade. The direct importation of jewelry

is small, but American goods of this class are obtained from Canadian importers in Halifax and other cities of the Dominion. The same remarks apply to groceries, glassware, hardware, musical instruments, and a number of other lines.

England, with a preferential duty, holds the market in jams, sauces, preserves, cotton, woolen goods, carpets, and linoleums, but it is believed that the imports from the United States of high-class clothing for ladies and gentlemen, fancy cottons, boots and shoes, hats and caps, could be greatly increased. The imports from the United States into the port of Sydney during 1911 were as follows:

Articles.	Value.	Articles.	Value.
Beer.....	\$12,326	Oils, lubricating and kerosene.....	\$9,676
Boots and shoes.....	4,940	Railway supplies.....	12,632
Bricks, fire.....	171,523	Ships' repairs.....	14,104

#### Trade of the Canso Agency.

Consular Agent Alfred W. Hart gives the imports from the United States to Canso as \$18,370 during 1911, an increase of \$2,670 over the preceding year, consisting of netting, anthracite coal, machinery, timber, rope, anchors, clams, compasses, meats, telegraph apparatus, engine oil, lamps, books, paper, glass floats, motor cycles, paints, sails, clothing, immigrants' effects, etc. Like 1910, 1911 was an off year for the fisheries of Canso, on account of the scarcity of bait fish, the use of such fish for food, the rough and changeable weather, and a marked scarcity of cod and haddock on the inshore grounds. The high prices of cod and haddock tended to offset the scarcity, but the inshore boats did not share in the profits to the same extent as the bank fishermen. The business in market and canned fish is being steadily developed here. The manufacture of glue and fertilizer also bids fair to grow. Dogfish were not as plentiful in this particular locality in 1911 as in past seasons, but a bountiful supply was obtained farther north.

Extensive surveys have been carried on in this county during the past season by Government surveyors, locating a railroad from Dartmouth to Guysborough, traversing the counties of Halifax and Guysborough. Branch lines were also projected to connect the road with Country Harbor and New Glasgow. It is generally believed that Canso will have to be included in the system, as it can furnish more traffic than any other port or place in the territory traversed by the lines. A large number of summer visitors are attracted here by the cool and pleasant climate, and a good summer hotel would

add to the number of such visitors. A new steamboat has been put on the route between Canso and Mulgrave.

#### Louisburg and Port Hawkesbury Consular Agencies.

Consular Agent Henry C. V. Le Vatte reports that the industrial conditions of Louisburg improved to some extent during 1911. The principal industries of this port consist of fishing, lobster canning, coal shipping, and small farming. Codfish, haddock, and pollock were about 20 per cent below an average catch, and lobsters 30 per cent. Salmon gave an average catch, but mackerel were not over 50 per cent of the average. Prices of all kinds of fish were above the average, particularly for lobsters. Fishers received \$5.50 per 112 pounds for lobsters for canning, the highest price paid previously being \$4.50. The shipments of coal to the United States increased 19,000 tons over those of 1910, and the shipments to local markets also showed a considerable increase, particularly from January to May.

The exports from Port Hawkesbury to the United States increased nearly \$18,000 during 1911. The gain over 1910 in the exports of sea products was \$29,444, and the decrease in coal \$11,769. Only one coal mine was in operation in this district during the past year.

#### Exports to the United States.

In the exports to the United States from Sydney, a decrease of \$462,904 in 1911 as compared with 1910 will be noted. This was made up almost wholly of rails shipped in bond through the United States to Canada, and was not, therefore, an actual export to the United States. The exports to the United States during 1910 and 1911, as invoiced at the Sydney consulate and its agencies, were as follows:

American goods returned to the United States from Sydney in 1911 were valued at \$5,038, from Port Hawkesbury \$300, and from Louisburg \$19.

**YARMOUTH.**

(By Consul Alfred J. Fleming.)

The trade of the consular district of Yarmouth during last year showed a slight improvement over 1910. The imports into the port of Yarmouth were valued at \$697,613, a gain of \$5,915, and the total exports amounted to \$4,455,124, a gain of \$14,530. Of the total imports in 1911, articles valued at \$554,124 came from the United States, a gain of \$3,062 over the previous year. The exports to the United States, according to customs statistics, were valued at \$865,127.

**Apple and Berry Crops, and Shipments.**

The apple crop of the counties of Digby and Annapolis, which include a large portion of the apple territory of the Province, was the largest in the history of Nova Scotia. The dry season, however, had an injurious effect upon the agricultural industries of the Province, the hay crop, which is one of the best yielders of the district, being about one-half the average.

In the Digby and Annapolis districts about 1,510,000 barrels of apples were produced, and toward the end of January of this year there remained to be shipped 600,000 barrels. Not exceeding 10,000 barrels were shipped to the United States from the district, most of the exports going to London, Glasgow, Liverpool, Bristol, and Hull, England, and to Hamburg, Germany, and about 100,000 barrels to South Africa. The average price of the apples was \$2 per barrel. The barrel makers were unable to supply the demand, and thousands of barrels were brought in from other parts of Canada. Barrels sold, wholesale, at 25 to 40 cents each, and the average price for the season was 33 cents.

The berry crop for 1911 was practically a failure. The number of crates of blueberries shipped to the United States in 1910 was 12,000, selling at \$2 per crate. In 1911 only about 6,000 crates were shipped, but the average price was about \$2.50 and the fruit was not so good. The exports of strawberries to the United States amounted to about \$12,000.

**Shipments of Eelgrass—Canning Industries.**

During the year about 500 tons of eelgrass were exported from this port to the United States and sold here at \$10 to \$12 per ton. There were fully 500 tons under cover for the 1912 market at the beginning of this year.

There are in this consular district about 20 lobster-canning factories, and during 1911 about 30,000 cases were canned for export out of the country, against 26,000 cases in 1910. Last year the home demand increased greatly, Canadian jobbers taking the entire output of some of the canneries. There are a number of firms in this consular district engaged in fish drying, and it is estimated that 200,000 pounds, valued at \$843,000, of dried, salted, and smoked fish were shipped from the counties of Shelburne, Yarmouth, and Digby during last year.

**Output of Manufacturing Establishments.**

There are four manufacturing establishments in Yarmouth which employ a large number of hands. These are boot and shoe making, cotton mill, iron works, and wood-working establishments. The

smaller enterprises include a knitting factory, a cigar factory, and small foundries, etc. Throughout 1911 the four larger establishments employed about 700 people. The average wages in the shoe factory were \$8, the woodworking and the iron works \$10. The total value of these four manufacturing enterprises is estimated at \$500,000, and the output of manufactures for 1911 was about \$1,250,000.

The cotton mills consumed 2,425,000 pounds of raw cotton, all of which came from the United States, the average price being \$11.70 per hundredweight. The total value of the manufactured product was \$522,000, consisting principally of white ducking of various grades. A number of new machines were installed during last year, and the company expects to add to the equipment during the present year.

The iron works employ 75 to 100 hands, and the output consists principally of engines, stoves, ships, etc. Last year seven ships, ranging from 50 to 1,000 tons were constructed.

During the middle of last year one of the two shoe-manufacturing establishments in Yarmouth moved to Truro, and in consequence the remaining factory was enlarged. During 1911 this factory turned out 70,000 pairs of shoes, most of these being sold in Canada. Some shoes were also exported to South America. At the end of the year the stock on hand was valued at \$20,360. Large improvements are in contemplation for 1912, and a new and much larger building will be occupied and the number of employees increased to about 125.

The output of the woodworking factory is chiefly office and store furnishings and house-building material. The plant is valued at \$50,000, and a good business is done. Considerable amounts of hardwood are imported from the United States, but the sales are confined to Canada. This factory employs an average of 30 hands.

#### **Lumber Cut, Price, and Shipments.**

The lumber cut during last year in the four counties comprising this consular district—Yarmouth, Digby, Annapolis, and Shelburne—was about 70,000,000 feet. The average price of lumber was \$17.50 per thousand, and lath \$2.50; wood was \$4.50 per cord f. o. b. There are in the 4 counties 70 sawmills, more than half of these being portable mills. Of the total cut of lumber, 7,000,000 to 8,000,000 feet were shipped to the United States.

The past winter was an exceedingly good one for the lumber industry, with plenty of snow and ice, and the woods lively with cutters. It was reported that up to the end of January the cut in the woods was at least 15 per cent better than for the same period in the previous winter, which was one of the best of recent years. The lumber in this district is spruce, hemlock, pine, and hardwood, and the first two take in more than two-thirds of the total cut of about 70,000,000 feet. About 25,000,000 lath were cut in the district, and these, selling at an average of \$2.50 per thousand were exported mostly to the United States. Ten to twelve millions of shingles were cut, but few of these were exported, home demands consuming them at about \$1.50 to \$1.75 per thousand.

#### **Building Operations, Harbor Improvements, and Shipping.**

The building operations in Yarmouth during 1911 amounted to about \$50,000. Two new bank buildings will be erected this summer at a cost of about \$20,000 each; the telephone company will erect a

new office building; several other buildings are in contemplation; and \$10,000 will be spent in enlarging the new shoe-factory building.

During last year 32,416 people arrived in Yarmouth from Boston on the regular ships, against 31,405 in 1910. The arrivals were mostly during the summer months.

The Dominion Government has appropriated \$100,000 for the dredging of the Yarmouth harbor, which work was to be commenced early in the present summer. The Dominion and Atlantic railroad and steamship service between this place and Boston and Halifax having passed into the hands of the Canadian Pacific Railroad Co., there is a great deal of speculation as to improvements, new boats, and better service.

During last year 2,588 vessels entered and cleared this port, as follows: 2,167 Canadian, 381 American, and 40 other countries. The total tonnage was 476,078, of which 410,710 was Canadian and 26,101 American.

#### Imports into Yarmouth.

The total imports at the port of Yarmouth during 1911 were valued at \$697,613, against \$691,698 for the preceding year. The articles coming from the United States were valued at \$554,124, a gain of \$3,065 compared with 1910. The following table shows the total value of the principal articles imported and the share of the United States in the trade:

Articles.	From United States.	Total.	Articles.	From United States.	Total.
Automobiles.....	\$5,000	\$5,000	Oils:		
Bicycles.....	3,600	3,600	Kerosene and gasoline....	\$11,640	\$11,640

Iron, and manufactures of.....	64,220	93,340	Total.....	554,124	697,613

#### Exports to United States.

The value of the exports to the United States, as invoiced through the American consulate at Yarmouth and the agencies at Annapolis Royal and Digby during 1911, was \$478,921, a gain of \$1,688 over the preceding year. The principal articles and their value for both years were as follows:

Articles.	1910	1911	Articles.	1910	1911
Apples.....		\$2,735	Junk.....	\$1,168	\$1,174
Cotton waste.....	\$3,980	5,528	Lobsters:

## AMUSEMENT PARK APPARATUS.

## ENGLAND.

[From Consul Samuel M. Taylor, Nottingham.]

At present there is nothing in the nature of a "switchback" scenic railway or roller coaster in operation in Nottingham, nor is there a park, such, for instance, as River View Park at Baltimore.

There are, however, several parks for the recreation of the public, some of them of considerable extent. In most cases they are simply open spaces of trees and grass, sometimes planted with flower beds, offering the younger population opportunities to engage in games and sports. Refreshment rooms are generally provided, selling various kinds of drinks. These parks, with their areas, are: Arboretum, 19 acres; Colwick Hall, 292 acres; The Forest, 70 acres; Bulwell Hall Park, 245 acres; and Bulwell Forest, 115 acres.

Colwick Hall and grounds and Bulwell Hall Park were once the residences of wealthy families. Colwick Hall is now the property of the Home Brewery Co. (Ltd.), of this city. It is a short walk beyond a street railway terminus and is also reached by steamers leaving every 15 minutes during the summer from Trent Bridge, another electric car line terminus. Small theatricals are given in the park, taking the form of Pierrot shows; in the Hall there are a dining-room, a public dancing hall, and several bars. Adjoining this park is a race course, where the Nottingham races are held six or eight times annually. Colwick Park probably offers the best opportunity for a roller coaster, but it should be of limited size.

**City-Owned Parks—The Outlook.**

The other parks are the property of the city. The Arboretum is located in the better residential quarter of town and closely planted with trees and flower beds. The Forest is near by and is chiefly a place for athletic practice. Bulwell Hall Park and Bulwell Forest are adjacent to a golf course, but are at the extreme northern end of the city, near extensive collieries and surrounded by the living quarters of the very poor. Other grounds belonging to the city are at Trent Bridge and along the Trent, where there is a drive and open ground known as the Victoria Embankment.

Questioned as to the availability of the municipal grounds for amusement purposes, the town clerk replied that he could not give an off-hand answer, but that if a definite offer were made to lease grounds for a term of years, say about five, he would bring it before the town council and it would probably be acted upon favorably.

With regard to the chances of successfully inaugurating a roller coaster or scenic railway here, I have interviewed the town clerk, the solicitor to the corporation (or city attorney), and an ex-mayor, who is a capitalist with large interests in city and suburban property. Their opinions agree that while a roller coaster or scenic railway might be well patronized for a year or two, its popularity would be ephemeral and not likely to outlast a season or two. A "switchback," to use the local term, was in operation at what was known as The Exhibition, a resort opened seven or eight years ago at Trent Bridge, at the populous southern end of the city, where three or four electric car lines have their chief terminus. In connection with this exhibi-

tion there were various devices, such as a maze, a switchback, a scenic railway, a water chute, and a Canadian toboggan. The city leased the ground to the operators for a term of five years, but the venture failed at the end of two. A previous undertaking of the same kind was also unsuccessful.

**Patronage Must Come from Permanent Population.**

Various reasons tend to make Nottingham unsuitable for such enterprises. The population of the city is 260,000 and as a whole may be described as prosperous and industrious, but there is no floating population. Sightseers are very few in number and holiday makers are unknown; practically no one comes here on vacation. A scenic railway would therefore have to depend for its patrons upon the city's fixed population, an element that soon tires of the same amusement. This feature was largely responsible for the failure of The Exhibition. Moreover, the summers here are very uncertain. Often the weather remains damp and cold throughout the season; and one or two such summers, when many persons would be disinclined to use a roller coaster or scenic railway, would react unfavorably upon the chances of a profit.

I may say that it has been the general experience in England during the last five years that while scenic railways are still successful in favorable localities, such as seaside resorts, the switchback is quite out of date. The public is well acquainted with both varieties, and neither would be looked upon as a novelty.

---

**BELGIUM.**

[From Consul General Henry W. Diederich, Antwerp.]

In the Antwerp consular district there is no pleasure park or amusement resort similar to those in the United States. These amusement resorts are generally established within the premises of the frequent world's fairs held in this country, but their life ends with that of the exhibition. I understand, however, that after the Brussels Exhibition of 1910 some of the attractions of what was known there as Luna Park were continued during the following summer.

Brussels, in my opinion, is the only city in this country at present able to make an amusement park pay; but in order to do any business with a company establishing such an enterprise, American concerns should certainly have a representative on the spot ready to jump in at the right moment. For instance, when the Brussels Exhibition of 1910 was being organized, Americans in Brussels immediately busied themselves in view of the establishment of Luna Park and induced a large number of American attractions to come to the exhibition.

Another international exhibition is now in course of preparation in Ghent, to be held early next year.

---

**GERMANY.**

[From Consul General Frank D. Hill, Frankfort on the Main.]

There is no regular amusement park at Frankfort, although there is a very large roller skating rink, which was opened by an American concern, but has since passed into German hands.

In spring and fall, when the formerly well-visited fairs are held here, permits are often issued for erection of temporary merry-go-

rounds, roller coasters, etc. These permits are issued to traveling concerns, which visit the leading cities much as circuses do in the United States.

A roller coaster was here last fall but has since been taken down and sent on to the next stop. This office is advised that this roller coaster, like most of the apparatus of this kind used in Germany, was built by a firm in Gotha.

---

#### INDIA

[From Consul Edwin S. Cunningham, Bombay.]

There are in Bombay no pleasure parks similar to those in the United States, but amusement resorts are well known. These, however, exist more at the time of a special exhibition or fair than they do at fixed places.

Recently there was an Old Bombay Exhibition, at which was erected the first scenic railway that had been known in this city. It was erected by the promoting company of the exhibition, but at the close of the exposition the scenic railway is being continued, though I think it is doubtful whether it will remain here any great length of time. It is the hope of the promoting company to dispose of it and wind up the exposition finances.

The scenic railway has appeared to be popular in spite of a few accidents which have occurred; therefore it is more than likely that another will replace the one that is here, in the event that this one is removed to some interior city.

#### People Fond of Amusements.

It would seem that this would be a very favorable market in which to sell. The Indian people, both the Anglo-Indian and native, are keen on amusements of various kinds, as much so as in other parts of the world; and with a favorable introduction it is not unreasonable that a scheme of this kind would be profitable. Not only is this true in Bombay but in other larger cities of this Empire. It is true that a great number of the people are very poor, but of the money they have they are glad to spend some on amusements; and if, as seems likely, the scenic railway should become popular, then this should prove a very profitable scheme.

I know of no company interested in procuring a new scenic railway, but there have been a number of inquiries received at this office for smaller amusements, such as merry-go-rounds, illusions, etc., and it is the intention of the inquirers, should they buy, to transfer these various amusements from place to place at such time as there exists a fair or exhibition, or some other festive occasion, of which there are a great number in India.

---

#### German Foreign Investments.

Consul George Nicolas Ifft, of Nuremberg, states that mortgage loans upon foreign realty would not be considered by German financial institutions. Several large ones such as the Deutsche Bank, the Dresdner Bank, and the Darmstadter Bank do reach out for considerable foreign business, but mostly in financing German commercial undertakings abroad. They always have money for this purpose, but the men at the head and in control of such enterprises are almost invariably Germans.

## ALASKA'S COMMERCE AND INDUSTRIES.

In the discussion before the House of Representatives of a bill to create a legislative assembly in Alaska, Delegate James Wickersham presented statistics relative to the commerce and industries of that Territory. The following extracts are from the Congressional Record's report of Mr. Wickersham's remarks:

**Agricultural Possibilities.**

The agricultural capacity of Alaska is surprisingly large to those who have never considered it. The Alaskan agricultural bureau has made a careful examination into the area of arable soil and has announced that there is more agricultural land in the Tanana Valley than there is under cultivation in Norway, Sweden, Finland, and the three northern Provinces of Russia. A study of the topography, climate, native plants, etc., shows that the conditions are not very dissimilar in the two regions, whatever advantage there is in climate being probably in favor of the European countries.

In Europe, within the limits of 58° and 70° north latitude are embraced about 599,450,000 acres. The area reported under cultivation varies from less than 0.91 per cent in Archangel and 0.5 per cent in Norway to 4.1 per cent in Sweden. In Finland, Vologda, and Olonetz only about 1 per cent of the total area is in cultivation, as the term is commonly used. In nearly every country there are natural meadows of large extent used as pasture and for haymaking, so that the total under agricultural use is probably double the figures quoted.

On a basis of 1 per cent of the total area available for crops and 2 per cent for crops, pasture, and haying, there should be over 3,650,000 acres capable of cultivation or 7,300,000 acres available for possible agricultural development in Alaska. In 1894 the Director of the United States Geological Survey estimated the area of tillable land in southeastern Alaska, in the Cook Inlet country, the Alaskan Peninsula, and adjacent islands at 2,000,000 to 3,000,000 acres. In 1900, after traveling repeatedly throughout Alaska and comparing estimates from various sources, Prof. C. C. George-son estimated the tillable and pasture land of Alaska at 64,000,000 acres. In 1910 Mr. J. W. Neal, who is in charge of the agricultural experiment station near Fairbanks, made a reconnaissance survey of the Tanana Valley, and he estimated the agricultural and grazing lands of that valley and the small valleys leading from it as about 9,700,000 acres, or more than the total area reported under crops in the specified countries of Europe. With the same development of agriculture in Alaska as in Europe to supplement its mining, fisheries, and other industries, Alaska should support a population almost equal to that of Europe north of 60° latitude. All the crops which can be raised in Norway, Sweden, Finland, and the northern Provinces of Russia—potatoes, root crops, barley, oats, carrots, beets, turnips, celery—can be produced in Alaska.

One farmer in the Tanana Valley secured the following results from his harvest of 1909: Three acres of potatoes yielded 18 tons, the market price being \$120 per ton; 1 acre of beets, 8 tons; 2 acres of carrots, 7½ tons, market price, \$140 per ton; 1 acre of turnips, 8 tons, at \$80 per ton; ¼ acre of rutabagas, 2½ tons, for which the market price was \$100 per ton; ¼ acre of red beets, 1 ton, at \$140; and in addition, he states: "I had 15 acres of barley which I cut for hay. I had 3½ tons which I sold for \$75 per ton and still have enough left for my own use for the winter. I raised 2 tons of cabbages, which I put away for the winter, besides which I sold between 3½ and 4 tons during the summer at an average selling price of \$140 per ton."

**Trade with the United States.**

Alaskan commerce with the United States for the last eight fiscal years has aggregated: In 1904, \$49,244,606; 1905, \$56,633,701; 1906, \$55,873,942; 1907, \$65,207,366; 1908, \$47,950,873; 1909, \$55,840,971; 1910, \$60,220,132; 1911, \$55,924,404. This gives an annual average for the period of \$55,862,077. Contrasting this average with the average trade of Hawaii and Porto Rico and 42 selected foreign countries with the United States, shows that China is the only one in the list whose trade exceeds that of Alaska: Alaska, \$55,862,077; China, \$56,402,715; Hawaii, \$51,487,809; British India, \$50,887,709; Scotland, \$49,781,945; Porto Rico, \$45,734,534; total British Australasia, \$44,655,821; total Africa, \$36,125,980; Spain, \$33,320,286; total Russia, \$32,917,181; Russia in Europe, \$30,838,704; Ireland, \$29,387,114; Austria-Hungary, \$28,848,050; British Columbia, \$28,410,635; Switzerland, \$24,247,694; Chile, \$23,815,162; Philippine Islands, \$23,406,380; British West Indies, \$21,948,279;

Denmark, \$19,007,892; Nova Scotia, New Brunswick, and Prince Edward Island, \$18,545,243; Dutch East Indies, \$16,970,057; Panama, \$15,473,172; total Turkey, \$15,209,728; Egypt, \$13,824,282; Sweden, \$12,702,708; Colombia, \$11,057,739; Hongkong, \$10,457,647; Peru, \$10,456,145; Venezuela, \$10,453,152; Norway, \$10,120,280; New Zealand, \$9,306,044; Portugal, \$8,648,746; Turkey in Europe, \$7,517,785; Costa Rica, \$6,631,232; Uruguay, \$6,507,280; Santo Domingo, \$6,034,066; Guatemala, \$5,049,635; Newfoundland and Labrador, \$4,661,239; Ecuador, \$4,653,404; Haiti, \$4,519,341; Honduras, \$3,873,993; Nicaragua, \$3,150,240; Greece, \$3,129,991; Salvador, \$2,556,710; and British Honduras, \$2,027,458.

Dividing the total trade of Alaska for the year 1910 by the total number of white people shown by the census to inhabit the Territory, it will be found that each white Alaskan in that year was worth \$1,487.75 in trade with the United States. If to the white population are added all the Indians—men, women, and children—then each inhabitant in Alaska was worth \$839.85. By the same analysis each Hawaiian in 1910 was worth \$347.78, each Porto Rican \$52.95, and each Filipino only \$4.13. In other words, every white man, woman, and child in Alaska was worth 4.3 Hawaiians, or 28 Porto Ricans, or 360 Filipinos.

#### Population—Dates of Settlement.

By the census of 1910 Alaska's population is 64,356. This is apportioned among the various races: White, 36,347; Indian, 25,331; Negro, 209; Chinese, 1,209; Japanese, 913; and all other, 347.

The dates at which some of the older towns were settled, and their population in 1910, appear in the list below:

Towns.	Date settled.	Population, 1910.	Towns.	Date settled.	Population, 1910.
Unalaska.....	1778	311	Skagway.....	1897	872
Kenai.....	1791	250	Yakutat.....	1898	271
Kodiak.....	1792	436	Nome.....	1898	2,600
Sitka.....	1799	1,039	Eagle <sup>1</sup> .....	1898	178
Afognak.....	1826	318	Fort Gibbon.....	1898	398
St. Michael.....	1833	415	Valdez <sup>1</sup> .....	1898	810
Wrangell <sup>1</sup> .....	1834	743	Circle City.....	1898	144
Nulato.....	1900	230	Petersburg <sup>1</sup> .....	1899	535

Unga.....	1894	108	Alaska towns.....		23,271
Karluk.....	1895	549			

<sup>1</sup> Incorporated towns which increased in population from 1900 to 1910.

#### Four Judicial Districts Equal in Population and Trade.

Alaska's population is distributed among the four judicial districts as follows: First judicial district, 15,216; second, 12,351; third, 20,078; fourth, 16,711. Not only is the population of the districts fairly equal in number, but the customs returns also show how nearly equal are the imports of merchandise from the United States into the four divisions. The following figures were compiled from the customs report of 1911:

Imports.	Fiscal year ended June 30—				
	1907	1908	1909	1910	1911
Juneau division.....	\$4,233,428	\$4,513,006	\$4,406,037	\$4,429,244	\$4,733,525
Valdez division.....	2,968,515	4,235,099	4,256,676	5,303,831	4,021,550
Nome division.....	5,958,731	3,964,548	3,788,794	3,864,219	3,759,275
Fairbanks division.....	4,650,419	3,244,933	3,754,548	4,365,353	3,222,160
Total.....	17,811,093	15,957,576	17,196,445	17,972,647	15,736,510

Then, too, the wealth created in and exported from each of these four divisions to the United States is as nearly equal as the population and the distribution of the imports. The following table shows how equally the wealth originating in Alaska in

1911 was divided between them. The table holds good, approximately, for the preceding years for a decade:

Divisions	Products	Value	Total
1 Juneau, southeast Alaska.....	Gold.....	\$4,250,000	
	Fish and furs.....	8,464,227	\$12,929,712
	Marble—gypsum.....	215,485	
2 Nome, west Alaska.....	Gold.....	3,125,000	
	Fish and furs.....	5,128,234	8,253,234
3 Valdez, central Alaska.....	Gold.....	475,000	
	Fish and furs.....	3,260,558	6,634,403
4 Fairbanks, interior Alaska.....	Copper.....	2,898,845	
	Gold.....	9,300,000	9,300,000
Total specified exports, Alaska, 1911.....			37,117,339

### Mineral Output.

In the 21 years from 1880 to 1911 Alaska's mineral output has amounted to \$206,813,594, the value for certain of these years being set forth in the annexed summary:

Years	Gold.	Silver.	Copper.	Gypsum, marble, and tin.	Coal.	Total.
Total production, 1880 to 1911.....	196,916,820	1,800,441	8,237,584	830,880	338,189	206,813,594
1880.....	\$20,000		\$826			\$20,826
1883.....	301,000	\$11,146				\$12,146
1888.....	850,000	2,181				852,181
1893.....	1,038,000	6,570				1,044,570
1896.....	2,861,000	10,007			\$84,000	3,044,007
1898.....	2,517,000	54,575			14,000	2,585,575
1900.....	8,166,000	45,494			16,400	8,228,294

### The Salmon Pack.

Out of the 87,037,884 cases (of 48 one-pound cans each) of salmon canned upon the Pacific coast since 1864 only 15.02 per cent was canned in the State of Washington, 20.11 per cent on the Columbia River, 2.28 per cent in Oregon, 1.66 per cent in California, 19.12 in British Columbia, and 41.81 per cent in Alaska. The salmon of Alaska are more valuable in proportion to the pack than in any of the other districts on account of the fact that Alaska produces a larger proportion of the higher-grade fish. The pack (cases) of canned salmon on the Pacific coast, by years and waters, for certain years from 1864 to 1911 is summarized below:

Years	Washing-ton.	Columbia River	Coastal streams of Oregon.	Californ-ia.	Alaska.	British Columbia.	Total
Total production, 1864 to 1911.....	13,070,452	17,503,530	1,983,770	1,445,674	36,389,737	16,644,721	87,037,884

<sup>1</sup> The Territory of Alaska was attached to the District of Oregon, Dec. 27, 1872, and on Sept. 1, 1893, Washington and Oregon were consolidated; again on Sept. 1, 1902, Washington and Alaska were detached from the District of Oregon and made a separate district.

<sup>2</sup> Act of Jan. 27, 1906.

<sup>3</sup> Included under "Tax on sealskins."

**The Alaskan Balance Sheet.**

The Alaska balance sheet shows upon the one hand the total production of Alaska from 1867 to 1911, and upon the other hand the total cash disbursements made by the Government of the United States for every purpose in the Territory of Alaska from the date of purchase until 1911. Alaska has produced from 1867 until 1911, \$206,813,594 in minerals, and in sea and fur products the sum of \$222,710,036, and has

paid into the Treasury of the United States from customs, internal revenue and license taxes, and other cash items \$17,117,355, making a total production and export from Alaska to the United States of \$446,640,985.

On the other side of that balance sheet is the \$7,200,000 which the Government of the United States paid to Russia for Alaska; then the Treasury statements for the payments made from 1867 to 1911, inclusive, and the expenses of the post office. The total moneys expended by the Government of the United States in Alaska from 1867 to 1911 in maintaining the National Government there, collecting customs and the revenues, maintaining the courts, the fur-seal fisheries, boundary commissions, and generally all items of governmental expense, have amounted only to \$35,816,674. That leaves a difference between the productions of Alaska and the amount the Government of the United States has expended therein of \$410,824,311.

### ITALIAN SHIPMENTS OF CARBON BISULPHIDE.

[From Consul Arthur Garreis, Catania.]

It may be of interest to American producers of chemicals to know that a shipment of 50 tons of carbon bisulphide has recently been made from Catania to the United States. This shipment, it is learned, is the forerunner of a monthly consignment of like amount.

This fact, coupled with several inquiries received from rubber manufacturers, induces the belief that a shortage in the supply of that product exists in the United States. When it is considered that there is a duty of 25 per cent on the product, that owing to its highly inflammable and explosive nature difficulties are encountered in finding vessels which will carry it, that the freight is \$18.25 per ton, that the containers (iron drums) are of two-thirds the value of the product and are subject to a duty of 45 per cent, it must be evident that the seeking of this product in a foreign market is hardly a matter of price, but is the result of inadequate production in the United States.

There is one establishment producing bisulphide of carbon at Catania. It began operations some 12 years ago to supply a local and neighborhood demand, where the article is used in extracting the oil remaining in the residue of olive-oil presses. Catania, being a sulphur center, was naturally a desirable location. The local concern quotes prices f. o. b. Catania as follows: \$5.98 per 100 kilos (220.46 pounds) for bisulphide of carbon, and drums (capacity 200 kilos, or 440.92 pounds) at \$7.72.

### AMERICAN MONAZITE PRODUCTION AND IMPORTS.

The Geological Survey reports that practically no monazite was produced in the United States in 1911. A total of 13,132 pounds of crude sand was mined in North and South Carolina, but no shipments were made to the manufacturers. It is estimated that this crude sand would yield about 3,820 pounds of refined sand containing nearly 95 per cent of monazite. The 1910 production amounted to 99,301 pounds, valued at \$12,006, in contrast to 541,931 pounds, value \$65,032, in 1909.

Official records show that 705,149 pounds of monazite and thorite, valued at \$60,542, were imported for consumption into the United States in 1911, as compared with 458,788 pounds, value \$48,199, in 1910. The imports of thorium nitrate in 1911 amounted to 121,111 pounds, valued at \$238,841; in 1910, to 124,808 pounds worth \$219,615. [A previous article on monazite and zircon production appeared in Daily Consular and Trade Reports on October 20, 1910.]

**BAHIA COMMERCIAL NOTES.**

[From Consul Southard P. Warner, Bahia, Brazil.]

**Increased Interest in Whaling at Bahia.**

In view of the abundance of whales just off this coast every year from June until October, it is rather astonishing that a steam whaling vessel was never used here until last year, when one was brought here by a local whaling firm. This steamer killed more than 100 whales and its owners have purchased a second vessel for the coming season. A recently organized Norwegian company will also have at least two steam whalers at Bahia this year, so that the kill will doubtless be much greater than ever before. The number of whales killed within a radius of about 15 miles of this city last season was something over 200, of which more than 100 were killed by the steamer and the remainder by the fleet of rather primitive local sailing whaleboats.

The whales (*Balenoptera musculus*) occurring here belong to the family of rorquals and are characterized by very long dorsal fins and very pronounced longitudinal folds on the throat and forward part of the belly. The average length of those taken in these waters is about 40 feet, although much larger ones are frequently encountered. The largest whale ever killed here is said to have been about 70 feet in length and to have yielded more than 1,375 gallons of oil.

No use has yet been made of the bones of the whales taken here, except for building landing stages at the boiling-down stations. The plates taken from the mouth (whalebone) are left on the beach, as there is no market here for them in their crude state and apparently no attempt is made to treat or to export them. A considerable quantity of the oil obtained by boiling down the blubber is consumed locally, the remainder being exported to England. The exports of this oil from Bahia in 1908 were 1,114 metric tons, value \$43,500; in 1909, 727 metric tons, value \$28,500; and in 1910, 1,037 metric tons, value \$40,500.

**American Well-Drilling Machinery.**

The State of Bahia has purchased a number of American well drillers for use in those sections subject to drought at certain seasons. Five of these machines have already been assembled under the direction of an American sent here for that purpose and are drilling wells at various points along the Bahia-San Francisco Railway. The introduction of artesian wells should prove a boon to cattle raisers in many sections of this and neighboring States where cattle do not do well solely because of the scarcity of good water.

It is probable that the imports of well-drilling machinery at this port will increase quite rapidly from now on, but it will be impossible for American manufacturers to effect sales here by correspondence. All of the well-drilling outfits so far imported here are said to have been purchased through an agency in Rio de Janeiro.

---

**Rubber Auction Rules in Ceylon.**

Consul Charles K. Moser sends from Colombo a copy of the "By-laws and Conditions of Sale of Rubber by Auction," which were adopted by the Ceylon Chamber of Commerce on March 20, 1912, and which will be loaned to those interested by the Bureau of Manufactures.

**THE LAUBEN KOLONIEN OF BERLIN.**

[From Vice Consul General De Witt C. Poole, Jr., Berlin, Germany.]

A lauben kolonie consists of many small plots of ground each with a little hut varying from a covered arbor for shelter during thunderstorms to a rustic bungalow. The colonies are situated mostly on the outskirts of German cities. Owing to the rapid growth of Berlin, the settlements here are being constantly encroached upon and driven further into the woods.

The owners of unimproved land in the municipal environs suitable for these colonies rent their property to a lessee called in German "gross pächter." In the city of Schöneberg laws are in force preventing the city from renting out any of its own land for more than 50 pfennigs (11.9 cents) a year per quadrat rute (11.14 square yards). The lessee divides the tract into small parcels most of which are from 14 to 25 quadrat ruten (155.9 to 277 square yards), the average being about 20 quadrat ruten (223 square yards). They are marked off by streets. The Schöneberg law also provides that not more than 70 pfennigs (16.66 cents) per quadrat rute can be charged to the ultimate renter.

When the land is owned by private individuals they can make whatever arrangements they think best, but the rental is never very high. In some cases large private landowners give the land free with the provision that the renter must be ready to vacate without previous notice any time it is demanded, notwithstanding that the conditions of the crop would cause a financial loss. In return for this each colonist must undertake to keep his plot tidy, but the manner in which his garden is planted is left to his decision.

The Red Cross Association has also rented large tracts in various places a mile or so out of Berlin, at Heinersdorf, Rixdorf, and Reinickendorf. At present the area controlled by this society is about 80 acres, harboring 900 to 1,000 families.

The renters often build their own huts, which are usually about 3 by 6 yards and of very crude construction. They are intended merely to serve as a protection from the sun and rain. The gardens are fenced off and often special playgrounds are provided for the children. There are also booths where milk and other beverages are to be had. In the lauben kolonien of the Red Cross the sale of alcoholic beverages is forbidden.

**Recreation and Industry Combined.**

It is customary in Germany for everyone to take a vacation in the summer, usually at the seashore or in the mountains. The lauben kolonien are meant chiefly for people who have not the means to take such a trip. By renting one of these small bits of land they have the opportunity of spending their Sundays and summer evenings in the open. While the German's natural love of flowers is apparent everywhere, a good deal of attention is paid to the growing of vegetables, of which good crops are realized, not only for the owner's use, but even for sale in a small way.

Recently the Red Cross Society has extended the functions of its colonies. Classes are held to teach the girls sewing and cooking, the boys carpentering and other useful employments. A circulating library of good and instructive books is another recent addition.

Periodicals dealing with this subject are the "Freund der Schrebervereine" and "Der Arbeiter und Schreber Garten," both of which are published in Leipzig, and the following books can be obtained from Schneider & Amelang Buchhandlung, Königin Augusta-Strasse 33, Berlin: Kupfer, "Das Arbeiterwohnhaus auf der Ausstellung für Arbeit und Volksernährung, nebst eines Nachtrages über die Laubengarten von Kufalt," 2.20 marks; Jurass, "Laubengarten bei der Grossstadt, oder der Laubenpächter von Berlin, Anleitung über zwecksmässige Einrichtung und Bepflanzung von Laubengarten," 1.50 marks.

---

### VEGETABLE FIBER IN WOOL.

[From Consul Augustus E. Ingram, Bradford, England.]

The serious evils arising from the careless packing of wool have recently been strikingly illustrated by the International Committee on Vegetable Fiber in Wool. This committee has prepared a large show card, to be issued broadcast among woolgrowers, on which is shown a sample of navy blue serge spoiled by the appearance on the surface of numerous fibers of jute which have not taken the dye. Beneath the sample is a warning printed in English, French, German, and Spanish that the greatest care should be taken in keeping jute fiber out of the wool in packing. On the card are also shown samples of string that should not be used and of the kind that is least harmful. The small pieces of jute string that get into the wool can not be picked out in the sorting process, nor is their presence in the woven fabric perceptible until after dyeing, when the only remedy is to have them removed by hand in the burling and mending process.

The vegetable-fiber committee has decided to hold an exhibition of wool packs in London during the early days of the next wool sales in July. Makers are invited to send specimen packs, showing the latest improvements and the lowest prices at which the packs can be sold. Following the exhibition there will be an international conference on the subject. [An article relative to previous action of the International Vegetable Fiber Committee regarding wool packs was published in Daily Consular and Trade Reports on Sept. 28, 1910.]

---

### PLOWS IN SOUTHERN ENGLAND.

[From Deputy Consul John J. Stephens, Plymouth.]

The two plow factories of this district turn out about 1,500 plows annually, which are sold all over England. One of the concerns makes large sales of plows and other agricultural machinery to Argentina.

The only foreign country selling plows in this district is the United States. A large number of American plows are shipped into Devon and Cornwall. The American firms send representatives to call on the local buyers and establish agencies. No business of any importance can be secured by correspondence alone.

The plow most in demand in this district is the reversible or one-way plow, turning a furrow to either right or left by reversing. The plow, including handles, is all iron and retails for £9 (\$43.80). Manufacturers allow wholesale dealers a profit of 25 to 30 per cent.

**LEONIC-WARE INDUSTRY IN BAVARIA.**

[From Consul George Nicolas Ift, Nuremberg.]

The manufacture of gold and silver trimmings, tinsel ornaments, braids, tassels, etc., known in the trade as "leonic ware," including manufacture of silvered and gilt copper wire or thread from which the same are made, is one of the many industries of Nuremberg and vicinity. There are in Nuremberg and the neighboring cities of Schwabach, Roth, Treuchtlingen, Weissenburg, Allersberg, and Ansbach about 20 factories engaged in this industry. Three-fourths of these manufacture only the finished product, while the other fourth manufactures the silver and gilt thread, the raw material, as well as the finished articles. The largest of these factories is at Roth, near Nuremberg, and employs, including some home workers, about 700 workpeople. This plant manufactures both the metal thread and the finished product. The second factory in size is in Nuremberg, and employs about 400 workpeople, but makes only the metal thread.

In all, about 2,500 workmen are employed in this industry. Of these, 60 per cent are females. Only a few children, from 13 to 16 years of age, are employed, as the law in regard to child labor is quite strict; such as are employed may work only 6 hours per day, and earn 75 cents to \$1 per week. Female employees over 16 years of age earn \$3 to \$4 per week, and male employees \$5 to \$6 per week.

The value of the annual output in this industry from the factories in this vicinity is about \$2,500,000, and while much of the product is used at home, the near Orient—Turkey, the Balkan States, Egypt, and Asia Minor—is the best customer. India, China, and Japan also buy freely. The United States was formerly a fairly good customer, but in recent years has been buying practically only the silvered and gilt thread and has manufactured the finished product at home. This thread the American manufacturer, it seems, is not able to make successfully. In 1911 leonic ware, mostly the metal thread, to the value of \$197,797 was sent from this district to the United States. This was a decrease of \$18,150 as compared with 1910.

**A Prosperous Year Followed by Dull Trade.**

The year 1911 opened with a promise of good business in this industry. Tinsel trimmings were still in fashion for women's clothes. The home demand was good and India and the Orient had ordered liberally. With the opening of summer, however, tinsel went out of fashion. The political disturbances in Persia and China, famine and plague in India, and the Italian-Turkish War all combined to lessen the demand of the best customers of this product, and the year closed with a rather dreary outlook, some of the factories having been compelled to reduce both the number of workmen and the hours of labor. This condition has continued during the year, with no present promise of improvement.

This industry is also strongly represented in Saxony—at Freiberg, Annaberg, and Buchholz. Germany's keenest competitors in the world's markets are France and Russia and the product of the latter country, where the lowest wages are paid, is beginning to make its presence felt in the markets of the Near East.

**IMPROVED SEWER-GAS BURNER.**

[From Consul J. N. McCunn, Glasgow, Scotland.]

An improved burner apparatus for the extraction and destruction of sewer gas has been invented by William Rodger, C. E., burgh engineer of Dunoon, in the Glasgow consular district. It appears that in the apparatus at present employed for this purpose, where the gas is used for illuminating purposes, complete destruction is not effected when the illumination is interrupted or otherwise gas is burned uselessly when illumination is not required. Mr. Rodger's invention obviates these drawbacks and provides advantages not heretofore obtainable.

A combustion chamber for sewer gas is fitted into the interior of the lamp head. This chamber is in the form of a two-part cone, the lower portion of the cone being carried through the base of the lamp head and suitably connected to the upper part of the lamp standard, the upper portion of the cone being made to fit the lower portion and suitably tapered and also fitting lightly the upper portion of the lamp head. In the interior of the upper portion of the cone is fitted a baffle plate and below this is located a Bunsen or other suitable burner, fed from the main gas supply through a by-pass, so that the Bunsen will be kept lit even when the supply to the illuminating burners is cut off. The sewer gas is led from the sewer to the lamp standard and passes upwardly through the cone, being partly burned below the baffle plate and any escaping gas being burned above the baffle plate.

In one of the lamps in Dunoon a burner apparatus is now in use and giving entire satisfaction. The inventor has made application for a patent in the United States.

---

**USE OF ALBUMEN IN GERMANY.**

[From Consul George Nicolas Ifft, Nuremberg.]

German "lebkuchen" (ginger bread and spice cakes) manufacturers tell me that they use considerable so-called Chinese albumen, and I am also told that small quantities thereof are used by large restaurants and hotels, by manufacturers of goldbeaters' molds, and by tanners. This product, so far as the users here know, actually comes from China or Asiatic Russia and is the dried whites of hen or duck eggs. Local users do not, however, import directly. German statistics do not separate the imports of albumen, the article being classed with "dried egg products" which were imported in 1910 from China to the extent of 7,586,155 pounds, valued at \$797,062. "Liquid whites of eggs" were also imported from China during the same year to the amount of 412,484 pounds, valued at \$31,178.

---

**Bound Volumes of Daily Consular and Trade Reports.**

The Government Printing Office will supply regularly in quarterly volumes, with complete 32-page indexes, bound sets of Daily Consular and Trade Reports from January 1, 1912. The price is \$1.50 per volume or \$6 per year, in order to cover the cost of the index and binding. Those desiring the bound volumes should write to the Superintendent of Documents, Government Printing Office, Washington, D. C.

**FOREIGN TARIFFS.****UNITED KINGDOM.**

[From Mitteilungen des Handelsvertragsvereins, May 20, 1912]

**Amendment of Merchandise Marks Act.**

On December 16, 1911, was published an amendment to the merchandise marks act of the United Kingdom, intended to increase the protection to trade-marks and firm names of British manufacturers and dealers. The law now is that goods bearing falsely and without authority the trade-mark or firm name of British manufacturers shall not be sold or exposed for sale, and the importation of such goods into the United Kingdom is forbidden. The customs authorities are empowered to deal with cases of infringement of this law; they may investigate those cases which come to their attention and notify those British manufacturers and dealers whose trade-marks and trade names are falsely used.

**AUSTRALIA.****Dutiable Value of Automobiles.**

The following customs order of May 9, 1912, contains new provisions for determining the dutiable value of imported automobiles in Australia, and supersedes the customs order of September 3, 1910 (published in Foreign Traffic Notes No. 1, p. 21, and in Tariff Series No. 17D, p. 13).

In connection with the importation of motor cars, duty is payable on the home consumption value in the country of export on each part when sold separately, notwithstanding that such parts are imported into Australia in their assembled condition, i. e., as complete motor cars.

Each invoice for motor cars must set forth the following particulars:

- |   |       |
|---|-------|
| (a) The price paid, or to be paid, by the Australian purchaser for the complete car.....  | £     |
| (b) The gross selling price of the complete car for home consumption in the country of export.....  | _____ |
| Amount of discount allowed to home-consumption purchasers at _____ per cent.....  | _____ |
| Net selling price for home consumption.....   | _____ |
| (c) The net prices ordinarily charged for the separate parts when sold separately for home consumption in the country of export, such separate parts and values to be enumerated as follows:  |       |
| Chassis (including painting) and wheels, but not tires, dash, spare parts, or accessories.....  | _____ |
| Body, including any extra charge for fore doors or high doors, or scuttle dash (when supplied) and including the following parts, viz, mud guards and footboards, including splashboards; brackets and well for spare wheel; dashboard, lamp brackets; hood irons; luggage grids or rails; foot or arm rests; and tool box..... | _____ |
| Tires (if any) showing size, brand and weight.....  | _____ |
| Lamps.....  | _____ |
| Generator (gas).....  | _____ |
| Tank (gas).....   | _____ |
| Horn.....   | _____ |
| Wind screen (wind shield).....  | _____ |
| Top (canopy or hood).....   | _____ |
| Spare wheel and cover.....  | _____ |
| Carpets or mats.....  | _____ |
| Tools (specify articles and values).....  | _____ |
| Any other parts or accessories (specify articles and values).....   | _____ |

When a chassis, without body, is shipped to Australia, the invoice must show the following particulars:

- (a) The price paid, or to be paid, by the Australian purchaser of the chassis. £ \_\_\_\_\_  
 (b) The net value as and when sold for home consumption in the country of export of:  
     Chassis (including wheels but not tires)..... \_\_\_\_\_  
     Tires (if any) showing size, brand, and weight..... \_\_\_\_\_  
     Mud guards and footboards (including splash guards and brackets)..... \_\_\_\_\_  
     Dashboard..... \_\_\_\_\_  
     Lamps..... \_\_\_\_\_  
     Lamp brackets..... \_\_\_\_\_  
     Any extra parts and articles comprising tool outfit to be specified separately, with values..... \_\_\_\_\_

A declaration in the following terms must be made (in a personal capacity) by the manufacturer (or supplier) or by some person duly authorized on his behalf:

I, \_\_\_\_\_, am the manufacturer (or supplier) (or am duly authorized to make this declaration on behalf of the manufacturer or supplier) of the goods described in this invoice, and I do hereby declare that the net price charged to the Australian purchaser for the complete car is not less (except where otherwise specially indicated hereon) than the net price charged to cash purchasers of similar complete cars for home use in this country; and I further declare that the net prices shown hereon for the separate parts and accessories are not less than the net prices which are or which would be charged for such parts and accessories if sold separately for home consumption in this country.

Signed, \_\_\_\_\_  
 Date, \_\_\_\_\_

Witness, \_\_\_\_\_  
 Date, \_\_\_\_\_

For parts and accessories which are of British origin and entitled to entry under the preferential tariff, declaration as to the country of origin (in the terms approved by the Department of Trade and Customs) should appear on the back of the invoice, and should show the total value of those items only which are entitled to preference. For the parts and accessories which are not entitled to preferential tariff rates the word "Foreign" should be inserted against each item on the face of the invoice.

The import duty on automobiles and parts in Australia is as follows: Automobiles and parts not elsewhere included in the tariff, including undergear (inclusive of axles, springs, and arms), axles not elsewhere included in the tariff, springs and hoods not elsewhere included, when imported from any country except the United Kingdom, 40 per cent ad valorem; when imported from the United Kingdom, 35 per cent ad valorem; bodies of motor cars, lorries, and wagons, including dashboards, footboards, and mud guards, (1) single-seated bodies, each—general rate <sup>1</sup> £17, British preferential rate £15; (2) double-seated bodies, each—general rate £24, British preferential rate £21; (3) bodies with fixed or movable canopy tops, such as landaulet, limousine, taxicab, and similar types, each—general rate £42, British preferential rate £36; chassis of motor cars, lorries, and wagons (but not including rubber tires)—general rate 5 per cent ad valorem; British preferential rate, free. The following articles suitable only for use as parts of chassis are to be dutiable as the chassis: Springs, axles (other than roller or ball-bearing), wheels imported in separate parts, and engines and parts thereof, under security that the articles

<sup>1</sup> The general rate applies to imports from the United States; the British preferential rate is for imports from the United Kingdom. £=4.8063.

in question will be used only in the manufacture of chassis. Roller-bearing and ball-bearing axles are dutiable at 5 per cent ad valorem under the general tariff, and are free when imported from the United Kingdom.

### CANADA.

[From Memorandum No. 1664B of the Canadian Department of Customs.]

#### Tariff Changes in Effect June 14, 1912.

The following changes in the Canadian customs tariff, admitting free or at reduced rates of duty a number of articles used as materials in Canadian manufactures, went into effect June 14, 1912. On the articles specified the rates of the general tariff are applicable when importation is from the United States.

Tariff items.	Articles.	British preferential tariff.	Intermediate tariff. <sup>1</sup>	General tariff.
752	Cane, reed, or rattan, not further manufactured than split, when for use in Canadian manufactures.	Free.	Free.	Free.
753	Flat braids or plaits, of glazed cotton thread, not over one-quarter inch wide, when imported by manufacturers of hats for use only in the manufacture of hat bodies.	Free.	Free.	Free.
754	Celluloid, xylonite or xylolite, in sheets, lumps, blocks, cylinders, rods, or bars, not further manufactured than molded or pressed, when for use in Canadian manufactures.	Free.	Free.	Free.
755	Hard rubber in strips or rods, but not further manufactured, when for use in Canadian manufactures.	Free.	Free.	Free.
756	Artificial abrasives, in bulk, crushed or ground, when imported for use in the manufacture of abrasive wheels and polishing composition.	Free.	Free.	Free.
757	Peroxide of barium, nonalcoholic, for use in the manufacture of peroxide of hydrogen, when imported by manufacturers of peroxide of hydrogen.	Free.	Free.	Free.
758	Binitrotoluol, trinitrotoluol, and perchlorate of ammonia, when imported by manufacturers of explosives for use exclusively in the manufacture of such articles in their own factories.	Free.	Free.	Free.
759	Glass plates or disks, rough cut or unwrought, for use in the manufacture of optical instruments, when imported by manufacturers of such optical instruments.	Free.	Free.	Free.
760	Yarns, threads, and filaments of artificial or imitation silk, produced from a form of cellulose obtained by chemical processes from cotton or wood, when imported by manufacturers of knitted, woven, or braided fabrics, for use only in their own factories in the manufacture of such knitted, woven, or braided fabrics.	Free.	Free.	Free.
761	Collodion for use in films for photo-engraving and for engraving copper rollers, when imported by photo-engravers and manufacturers of copper rollers.	Per cent. 15	Per cent. 17½	Per cent. 17½
762	Special parts of metals, in the rough, when imported by manufacturers of cameras or kodaks, for use only in the manufacture of cameras or kodaks.	5	7½	7½
763	Peppermint oil when for use in Canadian manufactures, ad valorem.	5	7½	15
764	Undyed ribbon, when imported by manufacturers of typewriter ribbon for use only in the manufacture of such ribbon in their own factories.	10	12½	15
765	Fabrics of which silk is the component material of chief value, when imported by manufacturers of neckties for use only in the manufacture of such articles in their own factories, ad valorem.	17½	20	20
766	Paper matting, when for use in Canadian manufactures, ad valorem.	17½	22½	25
767	Drawn iron or steel hoop, band, scroll, or strip No. 14 gauge and thinner, galvanized or coated with other metal or not, when imported by manufacturers of mats for use only in the manufacture of such mats in their own factories, ad valorem.	Free.	5	5

<sup>1</sup> Not in force.

### SALVADOR.

[From Diario Oficial, Salvador, May 28, 1912.]

#### Tariff Changes in New Tariff.

Following the recommendations of the Minister of the Treasury and of Public Credit [see Daily Consular and Trade Reports for May 8, 1912], the legislature of Salvador voted for the publication of a new

edition of the customs tariff, and provided for a number of changes in the rates of duty. Notice of the decree providing for the publication of the new edition of the tariff, containing the changes in the rates of duty referred to, was published May 28, 1912, with the provision that the changes therein contained should take effect 30 days from that time.

It is the intention of the Government to do away with ambiguities and obscurities in the customs tariff through this forthcoming new edition, and considerable attention has been given to the classifications. A number of the changes in the tariff which are made in this decree are little more than changes in form and phraseology, made to improve the classifications in the schedules. Other changes in the tariff are actually increases or reductions in the rates hitherto in force. It is stated that reductions are made on certain articles of general use among the common people and that increases are made in the rates on a number of articles of luxury. The principal articles affected by these changes are as follows:

Articles subject to increased rates of duty: Silk trimmings of all kinds; ready-made clothing of silk; portemonnaies; colored cotton cordage; table linen; imitation gold or silver tissue; Epsom salts, sodium sulphate, and potassium sulphate; iron rivets or clasps for clothing; hinges and similar hardware for doors, windows, and furniture; woollen blankets and quilts; fans with ivory, mother-of-pearl, tortoise shell, or precious metal frame; tiles; manikins or lay figures; underwear; quilts containing feathers.

Articles subject to reduced rates of duty: Cotton shirts with bosoms of pure or mixed silk; cotton blankets with floss silk; pectoral medicines without alcohol, as preparations of cod-liver oil and of tar; sago, tapioca, and lactated flour; borax, hyposulphate of soda, boric acid; naphthalene, incense, gum arabic, benzoin, and similar gums; refined sugar; absorbent and medicated cotton; tinned iron nails and tacks; lead rivet plates for galvanized iron sheets; iron fence wire; pens; shirts of wool slightly mixed with linen or hemp; cement, exempted from the tax of \$0.25 gold [see p. 111, Foreign Tariff Notes, No. 6]; sheet glass of all kinds; glue; scholars' slates.

Articles not specified formerly or given new classifications: Artificial silk in thread, yarn, and fabrics; machinery for making medicines; railway material; woollen quilts and blankets with floss silk; ice; glass bottles with metal and celluloid tops; belts of all kinds for men and women.

[A copy (in Spanish) of the decree, containing the new "aforos," or rates on which the duty is calculated, is on file in the Bureau of Manufactures.]

## ENGLISH ENGINEERING SCHOOL ENLARGEMENT.

[From the London Times.]

The new Harrison-Hughes engineering laboratories which form the latest addition to the facilities for instruction in engineering at the University of Liverpool were formally opened on May 18. They have been erected at a cost, including equipment, of about \$200,000. Special attention has been given to the problems of the utilization of fuel for power purposes, and especially to work relating to internal combustion engines and gas producers. The new building also provides an extensive plant for experiments in hydraulics; a laboratory for the study of the dynamics and kinematics of machines; a design and drawing department; a large metal workshop equipped with machine tools of the latest type by English and American makers; and an engineering library.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 9085. Wheat and bran.**—An American consul reports that a commission merchant in a European city of 65,000 inhabitants wishes to hear from American exporters of wheat and bran. He also desires connections in other lines similar to these.
- No. 9086. Food products and groceries.**—Several commission merchants in various cities of a German province desire to represent American exporters. They have informed an American consulate that they are particularly interested in food products and groceries. Correspondence is preferred in German.
- No. 9087. Acetylene lighting apparatus.**—American firms interested in the sale of acetylene generators or a system of lighting for household purposes, by means of acetylene, might do well to interest themselves in the trade which is now being developed in this line in a city of the West Indies. An American consul reports that several plants have recently been installed in his district to light private residences, but all the apparatus and material came from a European country. The consul adds that all information to be obtained concerning the introduction of American systems of acetylene lighting to the trade in his district will be furnished upon request for the same.
- No. 9088. Lime.**—A report from an American consul in Canada states that a cement company in his district desires prices and other particulars regarding lime. Quotations should be given both f. o. b. and delivered.
- No. 9089. Motor trucks.**—A business man in a Latin-American country has expressed to an American consul his intention to establish a dray line of motor trucks in the city in which he is located, as soon as the streets are rebuilt, which will take place in the near future. He would like to hear from American motor-truck manufacturers regarding their products, and would be glad to receive catalogues, in Spanish, and any other particulars that would be of value. The consul requests that a complete set of such catalogues be sent for the files of his office also.
- No. 9090. Furnishing goods and wearing apparel.**—A commercial traveler has informed an American consular officer in Canada that he would like to obtain the sales agency for the maritime Provinces for the following lines of goods: Neckwear, collars, shirts, ties, and all other lines pertaining to men's wearing apparel, as well as lines of novelties. He is anxious to hear from American firms handling these lines.
- No. 9091. Dredging and wharf construction.**—The American consulate general at Ottawa, Canada, reports that the Department of Public Works, Ottawa, has advertised for tenders, to be received until July 2, 1912, for dredging required at St. George, New Brunswick, and at Port Arthur, in the Province of Ontario. Tenders will also be received until July 10 for constructing a wharf at Cache Bay, district of Nipissing, Ontario. Specifications and form of tender can be obtained upon application to the department at Ottawa.
- No. 9092. Building materials of various kinds.**—An American consul in an Asiatic country writes that increased building operations in his district suggest a possible market for American building materials, including cement, window and door frames, and woodwork generally. It is urgent that American firms interested in this opening send their catalogues and price lists in quadruplicate to the consulate immediately. The consul further reports that more complete information as to local wants in the way of building materials will be furnished shortly. This information will be furnished to American firms as soon as received by the Bureau of Manufactures.
- No. 9093. Bedsteads, mattresses, furniture, and other hotel furnishings.**—The proprietor of a hotel in the Levant has requested an American consular officer to secure catalogues and price lists of black enameled and brass lacquered bedsteads (single and double), wire mattresses, and other bedroom furniture. About 30 additional rooms are being added to the hotel and they will be furnished in first-class style. Quotations should be given c. i. f. city of destination, and all detailed information regarding articles offered should be given at once.

## COMMERCIAL REVIEW OF AUSTRIA-HUNGARY.

### AUSTRIA.

[By Consul General Charles Denby, Vienna.]

The domestic condition of Austria during 1911 was characterized by the general normal commercial development that has marked many years. A drought during the latter part of the summer caused a short yield in the later crops and a slackened activity in industries dependent upon the harvests. The insufficient rainfall had a further adverse effect in hindering transportation on the shallow waterways. This made it difficult to bring farm produce to market and increased appreciably the cost of shipping manufactured products, resulting in a general rise in the price of foodstuffs, which, however, did not reach such proportions as to work pronounced hardship. The drought, in fact, was so late in the year that it did not affect crops universally, several of which had been gathered and marketed under normal conditions.

### Public Works.

The project for the construction of a system of canals to connect the Galician with the Austrian waterways continued to attract public attention in 1911. The difficulty of raising funds for this great work and the multiplicity of political considerations which surround its undertaking make uncertain the date when it will be actually begun.

The Austrian Government continued in 1911 the settled policy of taking over control of the railways in its territory. At the end of 1910, 83 per cent of the mileage of the country had come under Government control, as compared with 52 per cent in 1901. Only the lack of funds prevents the acquisition by the State of the remaining mileage at an early date.

**Foreign Commercial Relations.**

Foreign political developments did not directly influence Austria's trade during 1911. The war between Italy and Turkey has as yet been without much effect upon commerce. The portions of the Turkish Empire in which Austrian commerce flourishes most have not so far been seriously affected by the war, though the Bohemian manufacturers find the demand for some lines of their exports temporarily lessened.

The foreign-trade statistics for Austria-Hungary, those for Austria alone not being compiled separately, show exports of \$483,772,800 and imports of \$641,576,200 in 1911, against \$490,977,000 and \$579,129,000, respectively, in 1910. The excess of imports over exports amounted to \$88,152,000 in 1910 and \$157,803,400 in 1911. The values of the principal items of imports and exports during the past two years are shown in the following table:

Articles.	1910	1911	Articles.	1910	1911
<b>IMPORTS.</b>			<b>EXPORTS.</b>		
Animals, live.....	\$2,139,400	\$6,224,800	Animals, live.....	\$19,801,600	\$10,131,300
Chemicals.....	10,094,200	10,925,900	Beverages, except mineral water.....	5,238,500	5,430,300

**Austria's Adverse Trade Balance.**

Much alarm was expressed when the excess of imports over exports in Austria began to assume large proportions several years ago, but no evil effects have resulted, and there is a disposition at present to regard this adverse balance, in spite of its increase, as a normal feature of this stage of Austria's commercial development. This adverse balance is due more to increasing imports than to decreasing exports. The exports in 1911 were only about \$7,000,000 less than

in 1910, while the excess of imports over exports was nearly \$70,000,000 greater than in 1910. The decrease in exports is found chiefly in the items of sugar, grain, cattle, and raw materials for manufacture. As 1910 was almost a record year for sugar exports, the decrease in that item loses much of its significance. The diminished grain exports were due to the continued effects of the poor harvests of 1909; the scarcity of cattle for export indicates an increased home consumption of meat; and the increased use of raw materials by Austrian factories explains the shortage in that item. The increased imports of tea, coffee, spices, tropical fruits, etc., evidence a favorable condition of the consumers, and the increased imports of raw material seem to indicate increased industrial activity. The protective policies of Austria and the countries with which it deals influence the interchange of manufactured goods, while the exports of raw materials and foodstuffs are checked by the home consumption.

If the annual receipts of the hotels, resorts, railroads, and retail merchants from the hundreds of thousands of tourists and students in this country could be estimated in these trade tables, the adverse trade balance would be more than met. Austria receives great numbers of students and tourists for every one it sends abroad. Consul Lowrie, at Carlsbad, reports that the spas of Bohemia were visited by 350,000 tourists and patients during 1911, and similar conditions are found on the Tyrol, the health resorts of Hungary, and the coasts of the Austrian Adriatic. The Austrian emigrants to the United States and other countries, and the agricultural laborers who annually cross the borders of Galicia to help in the harvests of adjoining countries are enormous sources of cash revenue.

#### Imports from the United States.

The imports into Austria from the United States consist of a great variety of articles. The main items in 1911 were raw cotton, \$37,250,000; unmanufactured tobacco, \$1,358,000; copper, \$7,000,000; pork products, \$2,570,000; resin, \$1,000,000; harvesting machinery, \$800,000; typewriters, \$750,000; mother-of-pearl and mussel shells, \$413,000; machine tools and machinery; dried, canned, and fresh fruit; animal and vegetable fats; boots and shoes; adding machines; cash registers; and a great variety of peculiarly American devices and inventions largely swell the total. Accurate statistics of the imports from America are not available, as an appreciable quantity comes through adjacent countries, particularly Germany, and thus loses its character as American goods, but the value thereof is estimated at something over \$50,000,000.

In general throughout Austria the excellence of the market for American machinery is commented on by all the American consuls in Austria, but in many cases with the added reflection that the market is more carefully watched by competitors than by Americans themselves. American representation for American lines is much to be advised. There is a belief that seems well grounded that firms selling both American goods and goods of competing countries purposely favor competing articles by adding to their American quotations large commissions and middlemen's charges. The advice to American manufacturers must be renewed that personal representation, Ameri-

can, if possible, is highly desirable, and printed matter in the language of the market is essential.

#### Exports to the United States.

The declared exports to the United States and its insular possessions in 1911, from the five consular districts of Austria proper show a decrease of \$625,304 as compared with 1910. The figures for the past two years are as follows:

Districts.	1910	1911
Carlsbad.....	\$1,704,136	\$1,610,193
Prague.....	3,147,517	3,001,175
Reichenberg.....	3,201,030	2,638,083
Trieste.....	1,362,484	1,381,570
Vienna.....	7,806,727	7,964,571
Total.....	17,220,886	16,595,592

The chief items of this export trade during the past two years are shown in the following table:

Articles.	1910	1911	Articles.	1910	1911
Baskets.....	\$109,438	\$122,288	Lamps and lamp ware...	\$238,990	\$173,933
Beads.....	127,295	256,809	Leather, manufactures of...	124,062	132,285
Beans.....	267,179	100,045	Linen, manufactures of...	728,480	777,266
Beer.....	871,042	888,348	Magnesite.....	1,224,522	663,522
Books, etc.....	150,328	181,256	Meerschaum and ambroid...	391,675	356,757

Iron, and manufactures of:			Wearing apparel, ladies'...	41,693	57,398
Enameled ironware.....	181,441	134,206	Woolen goods.....	377,694	217,174
Other.....	236,624	62,609	All other articles.....	1,024,744	1,797,746
Jewelry and millinery					
goods.....	679,461	421,056			
Laces.....	161,281	306,616	Total.....	17,220,886	16,595,592

While decreases occurred in many items to the United States, the trade has fluctuated in response to a variety of conditions, mostly of a temporary character, having no reference to the essential qualities of the markets. The drought caused a reduction in the bean shipments. The magnesite exports fell off on account of slackness in the steel industry in the United States. Human hair exports show a noticeable decrease, alleged to be due to a change in American styles. The increasing manufacture of the Tungsten electric light globes in the United States cut down the export of these articles in 1911 to \$50,000 as compared with \$117,000 in the preceding year.

Increases were also made in a number of items, including beads, glassware of various kinds, and laces; also hats and caps, owing to the demand in America for the Austrian velours hat. Hops increased in value but not in quantity. Hides and skins show an increase of over \$100,000, due to the decreased American tariff.

## HUNGARY.

[By Consul General Paul Nash, Budapest.]

Hungary experienced a year of great prosperity in 1911. The adverse trade balance, far from being an unfavorable sign, indicates Hungary's ability to buy foreign goods. Commercial activity was never greater—the banks report substantial gains in deposits, the railways earned more money and handled more freight and passengers, and the factories, with few exceptions, worked full time throughout the year.

That such conditions exist in spite of Hungary's unfortunate geographical position, and in spite of the keen competition of Austrian industry, is a sign of its inherent strength and a guaranty of its future position among the important industrial nations. Hungary's per capita foreign trade is nearly as great as that of the United States. This is the more striking when it is remembered that Hungary's imports always exceed its exports in value.

**Agricultural Review.**

The grain crop of 1911 was some 3,000,000 bushels less than in the preceding year, and there were some surprising differences in the yield per acre, as shown by the following table:

Grain.	Yield.		Acreage.		Yield per acre.	
	1910	1911	1910	1911	1910	1911
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Acres.</i>	<i>Acres.</i>	<i>Bushels.</i>	<i>Bushels.</i>
Barley.....	55,742,833	75,612,000	2,904,365	2,925,788	19.2	25.8
Corn.....	213,315,714	161,082,000	7,007,818	7,189,219	30.1	22.4
Oats.....	74,660,500	95,532,000	2,911,619	2,930,750	25.6	32.2
Rye.....	54,706,428	54,171,000	3,046,690	2,901,441	17.9	18.2
Wheat.....	181,066,333	190,242,000	9,474,036	9,153,685	19.1	20.7
Total.....	579,520,808	576,639,000	25,404,528	25,100,883	.....	.....

The partial failure of the corn crop, caused by the excessive dryness of July and August, was somewhat compensated for by the increased yield of the other staple cereals, which, being harvested earlier, were not so seriously affected. The quality of both wheat and barley was excellent, being unusually rich in protein, hard, of the finest color, and heavier than for some years past. There has been a steady deterioration in the weight of cereals during the past seven or eight years, brought about, it is said, by the depletion of the soil. Grain prices ruled uniformly higher in 1911 than in the preceding year.

The potato crop also suffered from the lack of rain, and only 183,939,000 bushels were harvested from 1,742,145 acres. This makes an average yield of 105.5 bushels per acre, which is here considered as too small. The yield per acre in 1909, not an exceptionally good potato year, was 118.2 bushels per acre.

The sugar-beet crop was not so bad in Hungary as in the other countries of Europe, and indeed, although the quantity was considerably below the average, the quality was excellent. The average price paid to growers was about 20 cents per 100 pounds. This was about 2 cents less per 100 pounds than in 1910.

**Large Production of Wine—Other Crops.**

The vintage of 1911 was satisfactory, 105,668,000 gallons of wine being produced from 767,765 acres, as against 60,750,000 gallons in

1910. The quality of the wine was excellent, surpassing that of the preceding year, although it is said not to be up to the highest standard of Hungarian production. The Ministry of Agriculture is building 10 storehouses in the principal wine-growing regions, to enable growers to store their product under the most favorable conditions at a moderate charge. It has often happened in the past that growers, particularly the smaller ones, found themselves, in seasons of exceptionally abundant production, with no cellars to store their wines and were obliged to dispose of part of their supply at a sacrifice. With the new arrangement the small growers will be in a better position to compete with the large proprietors and will also be better able to secure advances on their wines from the banks.

The fruit crop was medium and its quality fair. Prices were to a certain extent kept up by foreign demand. Vegetables of all kinds suffered more or less from the drought. The tobacco crop was not abundant, but as the Government, which buys the whole crop, paid an average of \$4.93 per 100 pounds, 94 cents more than was paid last year, the growers had no cause to complain.

#### **Conditions in the Live-Stock Industry.**

There were 6,183,424 head of cattle, 2,000,611 horses, 6,415,197 swine, 7,526,783 sheep, and 331,383 goats in Hungary in 1911, an increase of 6.07 per cent in cattle, 1.4 per cent in horses, 2.2 per cent in sheep, 13.6 per cent in goats, and a small decrease in the number of swine as compared with 1895. The increase in the number of cattle is not sufficient to keep pace with the growing ability to pay for meat and the consequently greater demand, and Hungary has to import somewhat inferior cattle and butchers' meat from Roumania and Servia to make up, in part, for the prime Hungarian beef exported, principally to Austria. The same situation exists, it is said, in the butter industry. Hungary exports large quantities of its best butter and imports inferior Scandinavian butter to meet the home demand.

The small increase in the number of horses is accounted for by the heavy export of these animals, amounting to over \$6,000,000 annually. The value of horses has increased, like everything else, in Hungary during the past few years, and a fine saddle or carriage horse costs more here than in France or England. It might even be possible for American breeders of blooded horses to sell some animals to advantage here. The decrease in the number of swine, amounting to some 30,000 in 16 years, is attributed to hog cholera. Ten years ago pork was 30 per cent cheaper than beef; now it costs as much as veal, which is the highest-priced staple meat on sale. In order to combat as far as possible the decreasing herds, the Ministry of Agriculture for several years past has imported English boars for crossing with the native breed, with satisfactory results. The crossbred sow produces litters of 10 to 12, while the pure Hungarian breed has only 6 to 8 young.

#### **Increased Use of Sheep and Goat Products—General Farming.**

The increase in the number of sheep is due to the better demand caused by the ever-increasing price of wool and the gradual awakening of the Hungarian public to the fact that mutton and lamb are desirable as food. Ewe's milk is also coming more and more into use for cheese making, and some of the Hungarian cheeses, notably that

called Pusztá Dőry, are quite up to the standard of the best Camembert. Goat breeding for milk and cheese production has developed very well. Whether anything is being done with the hair of these animals has been impossible to learn, but the skins are valuable for glove makers and find a ready market.

On the whole, 1911 was a good year for the farmers. The protective tariff on agricultural products, the increasing wealth, and the demand for more and better food, which depends upon the increased ability to buy, have kept prices up to a level never reached before. Hungarian lands are being gradually divided up into small parcels and used for intensive culture instead of for grazing cattle and swine, as formerly. Agricultural education is advancing steadily enough to encourage still further efforts on the part of the Government toward the establishment of schools, the maintenance of traveling lecturers, etc. Dry farming is arousing more and more interest, and it is hoped that an international congress on this subject will be held in Budapest in 1913 or 1914.

#### Rapid Increase in Number of Banks.

Large increases in bank capitalization and high dividends marked 1911 in financial circles. In Budapest 18 new banks were established, and 185 in the Provinces. Conservative bankers fear that the keen competition likely to result from the rapid increase in the number of banks in Hungary may induce the smaller banks to accept risks that are not now carried by good houses, and thereby weaken the popular faith in the solidity of the smaller banks. Failures are now rare in the Hungarian banking world. The following table shows the increased business of the five leading Hungarian banks during 1911, in millions of dollars:

Banks.	Capital.		Assets.		Liabilities.	
	1910	1911	1910	1911	1910	1911
	Million dollars.	Million dollars.	Million dollars.	Million dollars.	Million dollars.	Million dollars.
Pest Hungarian Commercial Bank.....	10.1	10.1	81.2	93.3	65.7	60.1
Hungarian General Credit Bank.....	12.1	16.2	76.5	90.7	64.5	72.5
Hungarian Bank and Mercantile Co.....	8.1	12.1	29.8	46.2	21.1	29.6
Hungarian Discount and Exchange Bank.	8.1	10.1	39.9	45.0	33.8	30.4
Habsz (Hungarian National) Bank.....	6.0	8.1	20.7	28.8	16.0	20.6

Some 35 other Budapest banks increased their capitals from an aggregate of \$53,186,000 to \$75,892,000, while 355 banks in the Provinces are reported to have increased their capitalization by an aggregate of \$23,548,000.

The five banks named in the table are interested in no less than 386 commercial and industrial companies. Almost all Hungarian industries, and to a certain extent Hungarian commerce, are capitalized by the banks, and the ability of the banks to provide funds for new enterprises is one of the reasons for the progress of Hungarian industries. These five banks paid dividends of 17, 11.5, 10, 7.5, and 8 per cent, respectively, a remarkable showing considering the increased capitalization of four of them.

#### New Mortgage Bank—Discount Rate—Increased Note Issue.

The National Union of Hungarian Mortgage Banks, one of the newly established banks, is planned to assist small farmers by buying large

estates, dividing them into small parcels, and selling them on extremely easy terms. The bank will also lend money to farmers for investment in their farms, to be repaid in small annual sums during 20 to 40 years. Of the \$3,045,000 capital of this bank, \$1,624,000 was furnished by the Government and the balance by three of the leading mortgage banks. The annual dividend is limited by law to 4 per cent. The president, vice president, and two members of the board of directors are designated by the Minister of Finance and the Minister of Agriculture. This cooperation of the Government with private concerns is one of the striking features of Hungarian commerce and industry and deserves to be more thoroughly studied by foreign students of economics.

The discount rate of the State Bank remained at 5 per cent from the beginning of 1911 until February 3, when it was reduced to 4.5 per cent. Toward the latter part of September, when the Morocco question was causing France to withdraw large sums from the European money market, the rate was again raised to 5 per cent. By the agreement entered into August 16, 1911, by Hungary and Austria the joint State Bank was empowered to increase its note issue exempt from taxation to \$121,800,000, with the privilege to extend until the end of 1917. The gross profits of the bank in 1911 were \$5,988,500, as against \$3,877,300 in 1910. Of this profit Hungary received \$1,583,400 net and Austria a like amount.

#### **Stock Market—Government Expenditures.**

The stock market was active throughout the year in spite of the disquieting influence of international affairs. The value of securities dealt in aggregated something over \$325,000,000, as against \$312,000,000 in 1910. Industrial shares were most active, on account of the flourishing conditions which prevailed in most branches of industry, and values had a tendency to increase. Bank shares advanced very little, probably owing to the establishment of so many new banks and to the increased capitalization of a large number of those already in existence. Government securities showed a downward trend. The public does not seem to favor Government rentes, with their small yield, when there are many commercial and industrial companies whose shares yield a higher dividend and which are considered as sufficiently safe. It is stated that the Government is about to require insurance companies and banks to invest a certain part of their capital in Government paper. This would reduce the profits of such companies, but would be an additional safeguard for the public and perhaps a necessary one if the rapidly increasing number of banks brings about a tendency to accept unreasonable risks. It is regretted that so little American capital finds its way to Hungary and that the Budapest Stock Exchange is not yet open to American securities. The mutual interest which would be aroused by a greater financial intercourse would be beneficial to both countries from every point of view.

The estimated ordinary expenditures of the Hungarian Government amounted to \$334,491,460 in 1911, an increase of \$46,491,460 over 1910. It is hoped that the new tax law which is to go into effect on January 1, 1913, will prove effective in meeting the constantly increasing expenses. This law, enacted in April, 1909, was to have gone into effect in 1910, but was postponed in the hope that it would not be necessary. The tobacco monopoly of the Government raised

its prices about 25 per cent, and it is expected that this will increase the revenues by a large amount. The burden of taxation in Hungary is becoming very heavy and is likely to become even heavier. The further contribution which Austria desires Hungary to make toward the maintenance of the common army will entail a great additional annual expenditure, if Hungary consents.

#### Commerce—Cost of Living.

Both domestic and foreign commerce were more active than in any previous year, and the turnover of Hungarian merchants was relatively large. In spite of the increased number of firms and the ever-growing competition, there were only 510 bankruptcies reported throughout the Kingdom, 68 less than in 1910. The most disquieting feature of the year was the further rise in the cost of living, an average increase in the value of the necessities of life estimated at 18 per cent. This is particularly remarkable when one considers the steady upward trend of prices since 1907, and unless something is done to relieve the situation those people who depend upon fixed incomes for their sustenance will soon be brought to the verge of absolute want. This applies especially to Government employees, of whom there are over 300,000 in Hungary. The prices of the necessities of life are considerably higher here than in the United States. The average price of beef carcasses here in 1911 was \$15.31 per 100 pounds, and of hogs \$14.95 per 100 pounds.

#### Government Aid to Industry—Iron Mills.

Hungarian industry gave very satisfactory returns during 1911, in spite of Austrian competition, higher wages, higher freight rates, serious railway congestion during the autumn, and compulsory insurance of employees against accident and illness. Hungarian industry is aided by the State, through subsidies, exemption from taxation, etc., but manufacturing is comparatively new in this country and the absence of a customs frontier between Hungary and Austria makes it imperative to assist manufacturers if they are to successfully compete with the well-established industries of the latter country. The value of the export of manufactures from Hungary during 1911 is estimated to be about \$162,000,000, an excellent showing for a country which a generation ago was purely agricultural. When it is remembered that Hungary's purchasing power is relatively very great and that she imported some \$303,000,000 worth of manufactured and partly manufactured goods in that year, a great part of which could be produced successfully here, it is not surprising that the future is considered very bright.

The iron industry was kept busy throughout the year. There was a very great demand for structural steel on account of the activity in the building trade and for armor plates for the navy. Orders for rails and rolling stock were delayed and were not as heavy as had been anticipated, so that some of the plants had to secure orders from abroad in order to keep going at full capacity. Machine manufacturers had a good year and expect still better things in 1912.

#### Other Manufacturing Activity.

The electrical industry, one of the most advanced in Hungary, was again successful in securing orders from abroad, principally in Austria, Italy, the Levant, and the Far East. The chemical industry

is one that apparently feels the Austrian competition strongly, but in spite of this two new plants were opened in 1910 and the construction of a third was begun.

The textile plants worked at 75 per cent capacity during the first five months of 1911, after which, with the prospects of a good harvest to stimulate the demand, they were kept at full capacity to the end of the year. The total capital invested in the textile industry amounted at the end of 1911 to \$77,000,000, about 60,000 hands were employed, and the value of the output was between \$51,000,000 and \$56,000,000. About half of the plants are engaged in the production of cotton goods and the remainder make woolen, linen, hemp, jute, and silk goods. This industry perhaps more than any other has felt the Austrian competition and under the circumstances it is somewhat surprising to see what progress has been made during the past decade.

The number of new industrial plants established during 1911 was 223, with an aggregate capital amounting to about \$24,000,000. Eighty industrial concerns increased their aggregate capital by \$11,502,910. The State spent \$3,349,500 in the form of subsidies to aid in the construction of 10 new plants and the enlargement of 15 already existing, thereby assuring the employment of an additional 3,700 operatives. Thirty-six smaller plants were assisted in the installation of new machinery, and over 100 factories were exempted from taxation. For the assistance of small plants the Government intends to purchase machinery and turn it over to the manufacturers at cost price, at the same time giving long credit. Industrial legislation was restricted to the passage of a bill limiting the hours of work for women employed in factories. This bill is the result of the international convention concluded in 1906, at Berne, of which Hungary was one of the signatories.

#### **Mining.**

There are no official statistics available on the subject of mining during 1911. In 1910, 7,517 pounds avoirdupois of gold, 27,661 pounds of silver, 213 long tons of copper, 2,076 tons of lead, and 502,000 tons of iron were produced and large quantities of ore were exported for reduction abroad. There was also some production of zinc, antimony, aluminite, manganese, and various other minerals. The production of coal amounted to 9,036,000 tons, and it is said that the production of 1911 was greater by about 800,000 tons. There is much room for improvement in the methods employed in most Hungarian mines, and with better methods the production will be greatly increased. There are vast resources in the way of coal and iron which have not as yet been touched and which will prove of inestimable value in the development of Hungarian industry. The coal is not of the first quality, but with modern methods of use there is no reason why Hungary should be obliged to import such enormous quantities of fuel as at present. Transylvania is particularly rich in coal, iron, and other mineral deposits which are awaiting exploitation. Petroleum and natural gas have only just begun to be developed, and indications already observed lead to the belief that both of these products will be found in large quantities.

#### **General Foreign Trade.**

Hungary's imports amounted to \$412,762,059 in 1911, against \$365,001,001 in 1910, and its exports to \$359,732,290, against

\$340,877,966 in 1910. The excess of imports over exports, while greater than that of 1910, was therefore due to the increased purchase of foreign goods and not to a decrease in exports. For example, the imports of textiles, wearing apparel, and dry goods showed an increase of over \$6,000,000 in 1911, while the exports of this class showed a slight gain. The increase in exports is more than accounted for by the larger shipments of breadstuffs, amounting to \$125,604,446 in 1911, against \$99,156,667 in 1910. The exports of live animals showed a decrease of about \$15,000,000, owing to smaller shipments of cattle and swine, while the imports showed an increase. Wine exports showed a gain of over \$4,000,000, with a small decrease in the imports. The import of cotton shows an increase of \$2,000,000, which speaks well for the Hungarian textile industry. The imports of fuel, principally Welsh and Prussian coal and briquets, increased about \$3,000,000. The values of the principal items of import and export during 1910 and 1911 are shown in the following table:

## Imports from the United States.

As the greater part of the American goods imported into Hungary comes via Germany or Austria and appears among the imports from those countries, it is impossible to state the value of Hungary's imports from the United States with any degree of exactness. For example, the imports of American typewriters indicated by the official statistics for 1910 indicated approximately 1,800 machines, whereas nearly 4,000 American typewriters were imported in that year. The imports of American shoes in that year amounted to at least 45,000 pairs, although the import statistics indicate only about 24,000 pairs. The great majority of American exporters will not learn to deal direct with this country, and many of those who have agents here insist on shipping via Hamburg. Under these circumstances the following table, giving the direct imports from the

United States during 1910, is interesting only as showing the character of the goods imported. The total value of the American goods which reached this market in that year was between \$14,000,000 and \$16,000,000.

### Exports to the United States.

The exports to the United States in 1911, as invoiced at the consulates in Hungary, amounted to \$2,293,690, a decrease of \$763,185, which was more than accounted for by the falling off in the exports of beans and broom corn, due to crop conditions in the United States and high prices here. The decrease in broom-corn shipments was also partly due to the damaging of the reputation of Hungarian broom corn on the American market by unscrupulous exporters, who sent shipments inferior to sample. The other decreases were accounted for by higher prices in Hungary, except in the case of mineral water, where overstocking was said to be responsible for the decreased demand. Considerable increases were made in the items of hair and bristles, hides and skins, rice, seeds, sugar, wine, and wood pulp. The following table shows the value of the principal exports to the United States in 1910 and 1911:

The exports to the Philippine Islands in 1911 consisted of \$6.897 worth of incandescent lamps, against \$116,359 worth of incandescent lamps and \$1,875 worth of wire nails in 1910.

### Railway Transportation.

During the first 10 months of 1911, the latest period for which statistics are obtainable, the Hungarian railways transported 127,025,000 passengers and 62,700,000 tons of freight, while the gross income

amounted to \$91,832,000. The total receipts for the 12 months of 1910 amounted to \$96,156,000, and if the last 2 months of 1911 were up to the average of the preceding 10 months the total for that year was over \$110,000,000. The total length of all the railways in Hungary at the end of 1910 was 12,397 miles, and 204 miles were constructed in 1911. At the end of 1910 the capital invested in railways was \$871,634,000. No figures are available of the investment in railways during 1911, except for the State railways, on which over \$17,000,000 was spent, principally for enlarging stations, double tracking, and general improvements.

The bridge over the Danube River at Gombos was completed, shortening the journey from Budapest to Serajevo by 50 miles, and a new coaling station and a warehouse for perishable freight were constructed at Budapest. The rolling stock of the railways was also increased.

Slow-freight rates were advanced 5 per cent and fast-freight rates 7 per cent on the State railways on January 1, 1910, owing to the fact that the net earnings were only about 2.5 per cent. The increase did not give the expected results and caused some dissatisfaction. The returns for the first 10 months of 1911 seem to indicate a substantial improvement of conditions and that the increased rates have not hindered the development of business and have increased the net earnings. A further increase is now under discussion, and will probably become operative on January 1, 1913. The zone system of passenger rates is to be replaced by the mileage system, and a substantial increase in the receipts from passenger traffic is expected. Toward the end of 1911 there was a great congestion of freight on most of the Hungarian lines, partly owing to a shortage of cars and partly to inadequate warehouse facilities at certain important points.

#### **Hungary's Shipping Trade.**

Inland river navigation was favored by a long and busy season, although low water during part of the summer impeded traffic to some extent. The Danube and the other important rivers were open for traffic in the early part of March and remained open until well into December. No statistics are yet available to show the aggregate amount of freight and the number of passengers carried by the different river navigation companies, but judging from the returns of one of them, showing an increase over 1910 of 45,000 tons, or a total of 862,500 tons in 1911, the increase was normal. An important event for the companies doing business on the Danube was the opening of navigation from Ratisbon (Regensburg) to Vienna, so that goods can now be shipped by river to Servia, Roumania, and Bulgaria and can be transhipped at Galatz for Black Sea and Mediterranean ports. Hitherto freight traffic on the rivers has been almost entirely limited to heavy or bulky goods, such as grain, building materials, etc., but recently there has been a tendency on the part of shippers to use this mode of transport for smaller packages as well; perhaps on account of the congested condition of railway freight traffic which has made prompt delivery impossible in many cases. Hungary has a well-developed system of waterways, and inland navigation has been a potent factor in her economic evolution.

Hungary is not usually mentioned as a maritime power, but there are 100 steamships with an aggregate tonnage of 199,300 engaged in

foreign trade and flying the Hungarian flag. This is proportionately much greater than the tonnage engaged in foreign trade under the American flag. Three of the four principal lines received subsidies during 1911.

One company received \$231,000 for maintaining regular sailings from Fiume to Spain, Portugal, and South America, and \$177,000 for a regular line to Morocco, calling at Malta, Gibraltar, Tunis, Algiers, Tangier, Casablanca, and Mogador. This company carried 9,997,000 tons of freight during the year. Regular services are also maintained between Fiume and Patras, Fiume and Italian ports, and Galatz and Constantinople. Hungarian shipping suffers somewhat from Austrian and Italian competition.

#### **Government Efforts to Limit Emigration.**

The Minister of the Interior places the number of emigrants from Hungary to the United States during 1911 at 70,000, compared with 137,000 in 1910. This decrease is regarded in Hungary with much satisfaction and is attributed in part to the better conditions of life which are beginning to obtain among the emigrant class. It is doubtless true that conditions have improved during the past few years, but there has not been a sufficient improvement in the ratio of wages to the cost of living to account for a 50 per cent decrease in emigration, and the real reason must be sought in the fluctuation of the American labor market. Efforts are being made by the Government to improve the conditions of the workingmen and the Government is assisting those who have already emigrated to the United States to return.

The emigration of several million people in the past 15 years has had a deterrent effect upon the country's progress. The ill effects are somewhat mitigated by the large amounts of money sent back to Hungary every year, but Hungary needs labor more than money.

#### **COST OF LIVING IN SPANISH CAPITAL.**

[From Consul Charles L. Hoover, Madrid.]

Only a general idea of the cost of living in Madrid can be given, as practically everything depends upon the standard maintained. Large modern apartments can not be had under \$1,200 per annum, and there are few at that price. Modest apartments may be had as low as \$750, and the most luxurious cost about \$5,000. Excellent ones may be had at \$1,800 to \$2,000.

Salaries of servants vary here according to the class employed. Housemaids command from \$4 per month for untrained peasants to \$10 for the best, cooks get \$10 to \$30, butlers \$16 to \$30, lackeys \$10 to \$20, chauffeurs from \$30 for poorly trained drivers to \$75 for skilled mechanics; but board and lodging are not usually furnished to chauffeurs.

Living is more expensive in Madrid than in any other city in Spain. Rents are about 50 per cent higher and other things about 25 per cent. This is easily accounted for by the fact that nothing is raised in the vicinity of the city and that it is the home of practically all the wealthy people of the Kingdom.

Sanitary conditions in most parts of the city are excellent, and the older portions are rapidly being brought up to date in this respect.

**CONSTRUCTION WORK ABROAD.****MEXICO.**

[From Consul T. C. Hamm, Durango.]

The State of Durango has only a little over 400 miles of railroad in operation. When it is considered that the State's area is approximately 43,000 square miles, the inadequate means of communication are apparent. This has helped prevent more rapid development of the rich and varied natural resources. A realization of this need recently resulted in much activity in railroad construction work and in projecting other much needed lines. Two important trunk line railroads now building will open up wonderfully rich sections and promise to give a powerful impetus to the State's material progress.

**Durango-Mazatlan Extension.**

The Llano Grande branch line, begun about two years ago, is being pushed to completion. Trains are now running to Rio Chico, 35 miles west of the city of Durango. The gorge of the Chico, some 900 feet deep, is being spanned by a 700-foot steel bridge, which will require six months to complete. Grading work west of the Chico has been finished, but track laying can not be undertaken until completion of the bridge, so it will be about a year before trains are running to Llano Grande, the present proposed terminal 65 miles west of this city. The road is standard gauge; a 2 per cent grade is maintained throughout, and 75-pound steel rails are used; the construction work being thorough, as this road is to be the first link in the trunk line connecting Durango with Mazatlan on the Pacific coast.

The chief engineer of the National Lines of Mexico was recently here and caused it to be known that the extension from Llano Grande westward to Mazatlan was assured and that construction would begin in the not distant future. This road will be one of the great engineering feats in modern railroading and will reveal many points of scenic grandeur. From Llano Grande to the crest of the Sierras, which will be negotiated at an altitude of approximately 9,500 feet, the road will have a steady, circuitous climb, but the 2 per cent grade will be maintained throughout. The direct distance from the summit to sea level at Mazatlan is about one-half that required to cover at a 2 per cent grade. The Pacific slope is so precipitous that it was at first thought to be impracticable to construct the road at this grade, but after many surveys it was worked out. About 7 miles of tunnel will be required. At one point the road will follow a hogback only a few feet in width and several hundred yards in length, which has a precipitous drop on either side of more than a thousand feet; at another point the road will wind about for 31 miles and return to within 2½ miles of the starting point. There are several instances in which the road describes complete circles and tunnels underneath the former track. It is estimated that the cost of the completed railroad from Llano Grande to Mazatlan will be \$12,000,000 to \$15,000,000 and that six or seven years will be required in its construction.

**Durango's New Lumber Mill.**

The Llano Grande branch has been built primarily as a timber road to tap the excellent growth of pine and oak in the hill country west of Durango City, which promises to become quite a lumber and milling center. To utilize the timber thus made available, a large sawmill, a

planing mill, and box factory are nearing completion in this city. The buildings are being substantially constructed of stone and are equipped throughout with American machinery which, when running at full capacity, will have a daily output of 200,000 board feet of lumber. The planing mill and box factory are likewise large modern plants. The latter will utilize the waste lumber. The local demand for boxes is considerable, as much of the commerce, especially with mining camps, must still be transported by mule or burro, and small wooden boxes prove the most convenient form for transporting the necessary supplies.

The cost of this completed plant of the *Compañía de Madera de la Sierra* will be about \$400,000, and, with the exception of the Madera mills in the State of Chihuahua, it will be the best equipped lumber mill in northern Mexico. The company owns much of the valuable timber property along the line of the new Llano Grande Railroad—a tract about 85 miles in length by 15 to 20 miles in width. A branch line has been constructed by the lumber company connecting with the Llano Grande Railroad at Navios, 52 miles west of Durango, and running 18 miles through the company's property. When the timber along this line is exhausted, it is the intention to extend the line farther south and eventually to build an additional spur track to the north. A favorable opportunity offers for the sale of American logging and timber cars and for logging tools and accessories in general.

#### **Canitas Branch.**

Another railroad line under construction, which means much for this section of Mexico, is the Canitas cut off from the city of Durango southeasterly about 170 miles to the city of Canitas, in the State of Zacatecas, where it will tap the Mexican Central to Mexico City. Passengers desiring to go to the Federal capital or other southern points from Durango must now go north 158 miles to Torreon before starting south. The new road will effect a saving in time from Durango of about seven hours and 186 miles. The road is completed 50 miles from Durango and is being extended about three-fourths of a mile per day. This new road traverses rich farming land, besides giving access to Sombrerete, Chalchihuites, and other important mining camps in Zacatecas.

#### **Nazas Valley & Pacific Railroad.**

This company has been formed to build a railroad from Tepehuanes to Guanecevi, both points within this State. The National Railways now have a branch line running 135 miles from Durango City northward to Tepehuanes. The promoters intend to connect with the National Railway system at Tepehuanes and continue on northward about 65 miles to Guanecevi. I understand that the concern has secured the State government concession and that active construction work is to begin in a few months. It is estimated that more than 1,000,000 acres of valuable timber land will be accessible to this railroad. Guanecevi, the proposed terminal, is one of the richest silver camps in the State and is now shipping about 2,000 tons of ore per month, where the only means of transportation is by mule or burro. The freight rate by the burro route to Tepehuanes, the nearest railroad point, is \$12 to \$15 per ton; by the proposed railroad it will not be over \$2.50 per ton. This will give a

most powerful impetus to the mining industry in northern Durango, as it will enable the successful treatment of large quantities of ore which are now thrown out upon the mine dumps as not being of sufficient value to justify the present high cost of transportation to the smelter. It is planned also to throw out branch lines to several other important mining camps in the northern part of the State, and to connect eventually with the Mexican Central branch line, terminating at Rosario.

Several other new railroads are contemplated in this State which have not yet reached the constructive stage. Probably the most important is the proposed line from Tepehuanes westward through the important mining camp of Topia and down the Pacific slope of the Sierras to connect with the Southern Pacific system at Culiacan. The State is alive to the necessity of railroad construction, and the lines in construction, with those contemplated, will do much toward developing its rich natural resources and will make quite a railroad center and distributing point of the city of Durango.

[From Consul Clement S. Edwards, Acapulco.]

#### **New Pacific Coast Railway.**

A beginning has been made for the opening up of this resourceful west coast country. Through the enterprise of an American corporation known as the Mexican Pacific Railway Co., whose principal offices are at Seattle, Wash., a railroad along the coast from Acapulco to Zihuatanejo is now under construction. The greatest difficulty encountered in this construction was in the first 10 miles out from Acapulco, it being necessary at one point to pierce the mountain with a tunnel 300 feet in length. The tunnel lies at a point about 3 miles from Acapulco and the ascent to this point is at a 2 per cent grade. The tunnel has now been completed and the grading for the greater part of about 10 miles likewise completed and ready for the ties and rails. The stretch of road between the city and the tunnel was completed and formally "opened" on February 15, when a train consisting of an engine and a gaily decked flat car arranged with seats carried the business men and officials of Acapulco for the first time over the site of the ancient trails to the tunnel, where the simple opening ceremonies were concluded.

The work of construction beyond a point about 10 or 12 miles distant from Acapulco is considered light. The line when finished will skirt the coast for nearly 150 miles and traverse a region wonderfully rich in agricultural and horticultural possibilities, and will at the same time parallel the mountain ranges abounding in merchantable timber.

Due to the disturbed condition of the country during the past year, the work of railway construction was completely suspended during certain months and at no time was the enterprise pushed with the vigor which more settled conditions would have permitted.

#### **The Line to Balsas.**

During the past year a concession was granted by the Government to this same company, or to men interested in it, for building a railroad from Zihuatanejo to the Balsas, a town upon the river of the same name, the Government granting a subvention of \$6,000 gold per kilometer (0.62 mile). It is now learned, although the com-

pleted arrangements have not yet been made public, that the Mexican Pacific Co. has disposed of its entire railroad interests in the State, including this last concession, to an English company and that the members of the former company will retire completely. This line when completed therefore, will connect Acapulco with Mexico City, and as its course is planned beyond Zihuatanejo it will follow the banks of the Balsas River to the town of that name, penetrating a region rich in mines and mining possibilities.

Some additional details of this enterprise from the Mexican Herald follow:

#### **Capital Arranged For.**

Arrangements have just been completed for raising \$40,000,000 gold for constructing the Mexican Pacific Railway between Balsas, Zihuatanejo, and Acapulco in the State of Guerrero.

The project includes the construction of two large cement docks to cost \$1,250,000 at Zihuatanejo and Acapulco which will be capable of accommodating the largest vessels in use on the Pacific coast trade.

The line, as projected, will run from Balsas, with direct communication with the City of Mexico, to Hacienda de Balsas, 185 miles, thence to the Pacific coast, which it will follow to Zihuatanejo, and thence to Acapulco, a total distance of 450 miles. An 80-mile branch will also be constructed to Uruapan, and a spur will probably be run from this branch to connect with the large copper mine at Inguaran.

#### **To Employ Thousands.**

The preliminary surveys and exploration work have been already been completed, and about 5 miles of grading have been finished at Acapulco. Work has been partially suspended during the recent disturbances, but the engineers in charge of the work have kept a force of at least 500 men busy all the time, and they anticipate no shortage of labor when conditions become more settled. It is planned to have 6,000 men working within the next few months.

The capital already available is \$30,000,000, which has been provided by the largest financial interests in England and France, and American financiers also are concerned in the undertaking. The president of the company is an American millionaire (Mr. Thomson, of Seattle, Wash.).

#### **Feat of Engineering.**

The importance of the line is great, as it opens up practically a virgin country rich in minerals, timber, and agricultural lands. Many difficulties will have to be met in crossing the mountains and from an engineering point of view to complete the line will be a colossal undertaking.

The concession calls for the line to be in operation in seven years from the signing of the contract, but it is confidently estimated that the work will be finished in four or five years.

The docks which it is proposed to construct at Acapulco and Zihuatanejo will form perfect harbors, as the natural advantages of these points are exceptional. Acapulco in particular, it is claimed, possesses an anchorage second only to Sydney, Australia, the finest harbor in the world. The bottom of the harbor at Acapulco shelves upward from 600 to 100 feet depth, and Zihuatanejo is almost similar. Preparatory work has already commenced on the docks at Acapulco.

[From Mexican Daily Herald.]

#### **Canadian Company for Power Plant.**

The Mexican Midland Light & Power Co. has recently been incorporated in Canada under the laws of the Province of Ontario to work the concessions granted to the Compañía Hydro-Eléctrica Mexicana, S. A. The concessions authorize the development of the waterfalls of the Rio Naranjo and the Rio Blanco for the purpose of generating electric power. The acquisition of these concessions, it is stated, secures for the company a practical monopoly for the supply of hydroelectric power over a great part of central and the whole northeastern Mexico, and the concessions give the right to transmit power anywhere throughout the republic.

The horsepower available from the Rio Naranjo, with the construction of only one small reservoir will, it is said be 65,000 during the whole year and that from the Rio Blanco is stated to be 35,000, which it is intended to develop after the completion of

Rio Naranjo. It is asserted that this combined 100,000 horsepower can easily be increased up twice the amount at a relatively small cost.

Already an important contract for the sale of power has been entered into. One contract has been signed by the parent company for the supply of 20,000 horsepower at \$75 gold per horsepower per annum. The company is said to be in negotiation with the principal power consumers of various towns, including Tampico, San Luis Potosi, and Monterey, and it is believed that there is already a market for all power to be generated by the company.

#### URUGUAY.

[From Consul Frederic W. Goding, Montevideo.]

##### **The First Drawbridge in Uruguay.**

On May 1, 1912, a new and important public work was officially inaugurated—the drawbridge over Las Vacas Creek, at Carmelo, the first of the kind in the country, which will be of the greatest possible future benefit to this rich and fertile district.

The drawbridge has two arms of equal length, similar in structure and size, as regards the rotary part, to the Parnitz at Stettin, and the Niederboum at Hamburg. The most interesting part of the bridge is its foundations, built by means of dikes, with water-tight divisions open at the top, which by their dimensions, on account of the great density of the water, may be counted among the most notable examples of this system, as it is rarely that the weight or water flow, which it must resist, overcomes it. The drawbridge has two navigable passages. The length of the rotary section is 118 feet, and of the arms 6.6 feet by 59 feet. The weight of the movable part is 300 tons, total width 26 feet, length 246 feet.

The work has been under the direction of a local engineer. The building of the bridge was done by the Government, after having called for the requisite three tenders, which were canceled because they exceeded the estimate given. [Illustrations of the bridge are filed for public reference at the Bureau of Manufactures.]

#### KOREA.

[From Consul General George H. Scidmore, Seoul, Chosen.]

##### **Electric Enterprises in Korea.**

It is announced by the Seoul press that the Japanese firm of Okura & Co. (a Tokyo firm) has made arrangements, under Government permission granted on May 66, for installing on the Chongchon River an electric plant to supply the demands of the mining district of north Pyongan Province.

The scheme contemplates the supply of motive power, tram service, and lighting, and contracts have been already entered into with the Oriental Consolidated Mining Co., the Chosen Mining Co. (both American), and others for the supply of over 2,000 horsepower. I am informed by representatives of these companies that this arrangement is considered of great advantage, in view of increased cost and growing scarcity of wood for fuel.

The coal to be used in the work will be supplied from Manchuria, where Okura & Co. control the output of the Penshu Colliery. The machinery required will be obtained from Germany. Okura & Co. are the sole agents for Japan of the Allgemeine Elektrizitäts Gesellschaft, of Berlin.

**FORMOSA**

[From Consul Samuel C. Reat, Tamsui, Taiwan, May 8.]

**Contract for Capitol Building.**

The Public Works Department of the Formosan Government informs me that it will, within this month, enter into a contract with the Trussed Concrete Steel Co., of Detroit, for the erection of a capitol building in Taihoku. The details of the contract have not been fully decided upon, but the cost of construction will be approximately \$250,000. The structure will be 254 by 435 feet and four stories high. The Kahn system will be employed. The American Trading Co. (Tokyo branch) will sign the agreement on behalf of the contractors. This undertaking was first reported by this consulate in Consular and Trade Reports for June 30, 1910. The plans, slightly altered, were made by a graduate of the engineering department of the Tokyo Imperial University. He was awarded the second prize of \$500 for his design. [A blue print of the plans has been filed for public inspection with the Bureau of Manufactures at Washington.]

**ROUMANIA.**

[From American Minister John B. Jackson, Bucharest.]

**Municipal Improvements at Bucharest.**

The Bucharest municipal council has practically decided to issue bonds for \$1,158,000 of the \$5,790,000 loan [referred to in Daily Consular and Trade Reports for Apr. 20 and May 21] which was authorized by Parliament before its adjournment. It is proposed to expend the proceeds during the current fiscal year, according to the following apportionment: Continuation of sewer system, \$250,900; construction of water filters, \$7,720; installation of electric-power plant, \$133,170; slaughterhouse, \$84,920; paving and providing drinking water, \$212,300; construction of schools, crematories, and markets, \$96,500.

**SWITZERLAND.**

[From Consul F. B. Keene, Geneva.]

**Railroad Over the Furka Pass.**

The construction of the Brigue (Valais)-Dissentis (Grisons) railroad, connecting the two upper valleys of the Rivers Rhone and Rhine over the Alpine passes of Furka and Oberalp, is actively pushed forward, especially between Brigue and Fiesch (15½ miles), where engineering works are numerous and important. A 1½-mile tunnel was to be drilled under the Furka Pass to avoid the highest point, but difficulties were encountered which caused a change of plans, now being considered.

**Construction Work in Canton of Geneva.**

The Swiss Federal Railroad Department in Berne, under which management the Lausanne station is now being entirely rebuilt, will next year undertake the same operation in Geneva. The present station of Geneva-Cornavin will be replaced by a modern building, to cost about \$4,825,000. Furthermore, a junction line connecting the two Geneva stations (Cornavin and Eaux-Vives) is to be constructed in the next few years at a cost of about \$4,632,000, two-thirds being paid

by the Confederation and the remaining third by the Canton of Geneva. The Confederation will also have to pay the expenses (\$530,750) called for by extension of tracks between the Cornavin station and the goods station at Chatelaine and for works at the Eaux-Vives station (\$386,000).

All the foregoing works are consequent to the assignment of the 6½ miles of railroad track from Geneva city to the French border from the Paris-Lyon Mediterranean Railroad Co., the present owner, to the Swiss Federal Railroads.

---

### RUSSIAN NOTES.

[From Consul General John H. Snodgrass, Moscow.]

#### Copper Ore in Nova Zembla.

A telegram from Odessa states that parties possessing the claim for working copper ore in the island of Nova Zembla had signed a contract with an Odessa banker, who advances \$100,000 on certain conditions for working the mines. It is said that the prospectors received a number of propositions from Russian, English, and German firms, offering the necessary funds.

A series of analyses made with samples of this ore are reported to have proved that it contained up to 40 per cent pure copper. A special steamer will take engineers and workmen, mostly from the Ural, to Nova Zembla. One group will investigate the Bay Propashaya, where copper ore was discovered last year, while the other will work through southern Nova Zembla.

#### Transportation of Meat in Refrigerator Cars.

In view of the confirmation of the special Russian railroad rate of 1 kopeck per pood and verst (one-half cent per 36.11 pounds per two-thirds of a mile) for meat transportation, the railway management presents the question of introducing special regulations for this traffic to the congress of railway representatives, which is soon to take place.

The administration proposes that—

(1) The transportation of meat in such cars can only be admitted in certain directions, as it is necessary to have icing houses at the stations of transit, and goods can not be accepted for transportation in other directions where no such icing arrangements exist. (2) Rules must be established according to which the forwarders are to inform the station of the arrival of the car of meat. (3) The regulations must indicate that the charge includes the cost of ice and the amount thereof. For the decision of these questions it is proposed to admit representatives of the meat trade.

---

### NATIONAL EDUCATION CONVENTION.

Discussion of the establishment of a Federal university to be supported by Government funds will be renewed at the fiftieth annual meeting of the National Education Association, which is to be held at Chicago from July 6 to 12. The National Education Association is the largest organization of its kind in the world, and not less than 50,000 are expected to be in attendance at this meeting. Other topics to be taken up include industrial education, manual training and art, the American high school, the relation of the public schools to social welfare work and to public health, and rural life conditions and education.

## THE URUGUAYAN BUDGET.

[From American Minister N. A. Grevstad, Montevideo, May 4, 1912.]

The budget committee of the lower house of the General Assembly has presented its report on the budget of expenditures for 1911-12, and the report is now being discussed.

The last budget regularly adopted was that for the fiscal year 1908-9, which is still in force, having been extended from year to year. The budget for the current fiscal year should have been adopted before June 30 of last year, but its consideration by the General Assembly has been postponed from time to time. As presented to the General Assembly in May of last year by the Minister of Finance, the budget called for an expenditure of 28,533,019 pesos. [The Uruguayan peso is equivalent to \$1.034 United States currency.] Meanwhile, legislation calling for extraordinary expenditures was passed, and in September the Minister of Finance submitted an amended budget totaling 30,433,975 pesos. Since then more legislation, necessitating heavy outlays, has been enacted, until the budget as now reported by the committee of the House has reached the high figure of 34,676,306 pesos, as compared with 21,075,351 pesos in the budget of 1908-9. The increase in these three years amounts to 9,600,000 pesos, allowing for 4,000,000 pesos for special services not scheduled in the earlier budget.

The appropriations for the present year are divided as follows: Legislative power, 582,967 pesos; Presidency, 86,107 pesos; Interior, 3,261,756 pesos; Foreign Affairs, 599,389 pesos; Finance, 2,049,702 pesos; Public Instruction, 3,100,725; Industries, 1,403,783 pesos; Public Works, 1,369,082 pesos; War and Marine, 4,676,474 pesos; Judicial power, 363,686 pesos; national obligations, 17,182,635 pesos. No estimate of revenue has been reported as yet in either house of the General Assembly.

## CLASSIFYING NATIONAL RESOURCES.

[Announcement of United States Geological Survey.]

The classification of the mineral wealth of the public domain is being steadily carried forward by the survey. Three years ago the land classification board was created. During May the survey classified nearly 2,500,000 acres of lands which had been withdrawn from public entry as coal lands. Of these, 126,751 acres were appraised as coal land, with a valuation of \$3,045,019, and 15,742 acres were classified as coal lands, but the prices not fixed. There were also classified as noncoal land 2,221,749 acres. New coal-land withdrawals of 23,003 acres were also made in Colorado, and restorations of lands that had been withdrawn pending classification were made to the extent of 107,319 acres in Utah, Washington, and Wyoming. The withdrawal of 597,591 acres of land in Wyoming, supposed to be underlain with phosphate rock, was also made, on the basis of geologic investigations. Power-site reserves were also created in Oregon and Washington to the extent of 2,362 acres, and public water reserves were created in Utah, covering 440 acres.

The total area of coal land which has been classified and valued in individual 40-acre tracts by the land board of the survey since its organization has been 16,174,200 acres, valued at \$721,856,656. The price at which this land would be subject to sale to-day had not this classification and valuation been done—the minimum valuation under the coal-land law—would be \$275,673,800, the difference in favor of the Government under the present policy being therefore \$446,172,856.

The land board has also classified as noncoal land more than 52,000,000 acres, and has made new coal-land withdrawals, based on geologic evidence, of 68,962,497 acres. Oil lands have been withdrawn to the extent of 4,774,182 acres, phosphate lands over 3,000,000 acres, and power sites nearly 2,000,000 acres.

**VENEZUELAN IRON-ORE DEPOSITS.**

[From Consul Thomas W. Voetter, La Guaira.]

Near the place where the Imataca Mountains approach the south canyon or pass of the Orinoco Delta are the Imataca mines now being exploited by the Canadian-Venezuela Ore Co. (Mackenzie-Pearson interests), the ore being shipped to Philadelphia. [Reference to the new port established near these mines was made in Daily Consular and Trade Reports on Jan. 22 and Feb. 26, 1912.] Farther inland along the river are other large deposits which have been denounced [the name of the concessionaire being obtainable from the Bureau of Manufactures]. I have been informed by a mining expert who has been looking for copper and lead, but not iron, that these deposits are hematite ore; there is also some limonite. They are very close to the river bank so that transportation would be easy. One of the characteristics of ore in this region is its good quality, it containing no phosphorus, little sulphur, and having some tungsten in addition.

[From Consular Agent W. D. Henderson, Ciudad Bolivar.]

**The Imataca Ore Co.**

The following account of the development of the Imataca iron mines appeared in a recent issue of the Port of Spain (Trinidad) Mirror:

The Imataca Ore Co. commenced prospecting some 18 months ago, and actual operations, with a view to exploration, began last November. Since then the *Alabama*, of 1,100 tons, has made three trips from Philadelphia with machinery and supplies, returning once in ballast and twice with a full cargo of ore.

The equipment brought down for handling and loading the ore is of the most modern design, being entirely operated by electricity generated in a 1,000-horsepower station equipped with Babcock & Wilcox boilers and other appliances. Two endless rope haulage tramways, one from the east and one from the west, will transport the ore from the different tunnels and open cuts to a central hill, where the cars will run out to a tippie trestle and be dumped into large pockets excavated in the hill on either side of the trestle, and each capable of holding 10,000 tons of ore. Beneath each of these pockets are tunnels of reinforced concrete with chute openings, whereby the ore may be run out to an endless rubber belt conveyor. This belt conveyor will carry the ore to a pier and elevate it to a trestle whence a chute will pour a steady stream of ore into the waiting steamer. By this means a 13,000-ton steamer will be loaded in about four hours. The rope tramways and conveyers are operated by 100-horsepower electric motors.

For construction and repairing purposes the company has an excellent machine shop, with the best of modern machine tools, a woodworking shop, and a sawmill. A large warehouse and store and a refrigerating plant are also a part of the equipment. All dwellings and buildings are constructed of expanded metal and concrete, and are both sanitary and cool.

At the present time the east tramway, power house, and pockets are well under way, and a few months more will see them in full operation. The company is giving employment to some 400 laborers, mechanics, and miners, recruiting from all parts of Venezuela, British Guiana, and the West Indies. This labor has proved very satisfactory, and the supply seems ample, for as the mines are better known, the daily ingress of men is increasing. So far the only actual mining has been temporary open-cut work, sufficient to load the supply steamer with a return cargo.

The ore found at Imataca is of a very pure and superior quality, averaging as high as 67 per cent, and when in full operation the company hopes to have an output of 1,000,000 tons a year. This will be handled largely by the company's own steamers, of a special design to give a maximum tonnage with a minimum draft to cross the Orinoco Bar. The bar and the river as far as the mine will be laid with gas buoys and other assistance to navigation.

---

*A map of North America*, 28 by 38 inches, has been issued by the United States Geological Survey, Washington, D. C., by which it is sold at 20 cents each, or 12 cents each in wholesale quantities.

**BRITISH INDUSTRIAL NOTES.**

[From Consul Church Howe, Manchester.]

**New Crushing Mill at Manchester Docks.**

The plant of the British Oil & Cake Mills (Ltd.), was opened on June 4, and marked the beginning of a new and important industry for the port of Manchester. The cost of the construction of the mill has been about \$364,987. Its capacity is 600 tons of seed per week, and provision is being made for equipment to turn out three times this quantity. Supplies of seed will be brought via the Manchester Ship Canal to the very doors of the mill, which is situated in one of the most populous districts in England, and where at present there is a good market for the articles produced.

**Direct Trade with Pacific Coast.**

A representative of the Maple Leaf Steamship Co. lately visited this port to investigate the possibilities of direct trade between San Francisco and other Pacific ports and Manchester.

It is expected that with the opening of the Panama Canal there will be a very considerable development in trade. The Manchester district is an ideal center for the distribution of canned goods, fruit, timber, ores, grain, and many other products shipped from the Pacific coast, and it is not unlikely that in the near future Manchester will become one of the ports of call for the steamers of this line.

**Fines in Lancashire Factories.**

The Blackburn Chamber of Commerce has been considering a bill suggesting the abolition of fines in the local factories. It has been stated that cotton employers had urged the members of all Lancashire districts to oppose the measure. Taking the figures for 3 months applying to 425 mills, employing 95,000 weavers, earning £1 (\$4.86) per head, they show that the fines amounted to less than 1 cent each person per week.

During a discussion of the subject it was stated by one of the members of the chamber of commerce that he did not believe abolition would benefit the workpeople. In times when surplus labor obtained it would act against their interests, leading to discharges for faults now covered by fines.

**Children's Parks Games.**

The Manchester Education Committee has sanctioned a plan whereby it is proposed that the children in certain day schools shall be taken periodically to the parks for recreation and organized games. The scheme is in the nature of an experiment, and at present applies only to seven schools, all of which are in the central and congested areas of the city. Schools in the more outlying regions do not come under the arrangement.

On Mondays, Tuesdays, Thursdays, and Fridays it is intended to give parties of the city-dwelling children a few hours in the open, and every child in the seven schools will spend one afternoon a week in this way. The whole of what would be the afternoon school hours will be taken up, and the actual time in the park, apart from the journey there (which will be made, where necessary, in special street cars), will be devoted to organized games under the superintendence of the teachers and such nature study and botany as can feasibly be introduced.

**RAILROAD TIE SCARCITY IN AUSTRALIA.**

[From Consul General John P. Bray, Sydney, May 18; in continuation of report in *Daily Consular and Trade Reports* for Feb. 16, 1911.]

The Works Department of the State of New South Wales recently called for a supply of railroad ties to be used in connection with an extension of the line from Wagga to Tumbarumba, this State. Over 70,000 ties were required, and despite the fact that the needs of the Works Department were duly advertised, no one has as yet made the offer to supply them.

It would thus appear that the local supplies of hardwood are being steadily reduced; for hundreds of thousands of hardwood ties have been and are still being exported from this State to the other States of the Commonwealth as well as oversea, and it is now becoming a serious question as to where the supplies required for local consumption will be drawn from. Assuredly there is still a fair supply of growing timber suitable for this purpose, but it is only a matter of time when, unless the greatest care be taken of reforestation, it will be necessary for the Works Department and also the Railroad Department to purchase their requirements from districts beyond the State borders. This condition of affairs is peculiarly interesting in view of the fact that the railroad lines of the State are controlled and operated by the State Government and not by private companies or corporations.

---

**INDUSTRIAL SCHOOL WORK.**

Needing more money for their schools than was being raised by taxation, the inhabitants of Wake County, N. C., adopted the unique expedient of cultivating the land surrounding the schools, the money obtained from the sale of the crops being used for the benefit of the school. Seventeen such school farms were operated last year. They were worked by 1,200 persons—men, women, and children—who contributed their labor free. The net gain from the enterprise was nearly \$1,200. This new movement to raise additional funds for the country school is described in a monograph just issued by the United States Bureau of Education for free distribution.

---

**Hay Crop of Southern Ireland.**

Under date of June 6 Consul G. E. Chamberlin, of Cork, reports that hay crop indications in southern Ireland point to a yield above the average. He states that grass started early, and that there has been sufficient rain to give it vigorous growth, adding: "Should the present favorable weather conditions continue for the next 30 days, the yield will be much above that of last year, and of good quality."

---

*Swedish-Japanese trade.*—American Minister Charles H. Graves, of Stockholm, advises that the daily press of that city recently stated that, according to the annual report of the Swedish consulate general in Japan, Sweden's exports to Nippon during the last three years amounted to: In 1909, \$1,007,870; 1910, \$1,523,680; 1911, \$1,748,575. In 1911 Norway's shipments to Japan are said to have aggregated \$241,295 and Denmark's \$10,820.

**FOREIGN PAPERS FOR ADVERTISING AMERICAN GOODS.**

[For previous series see Daily Consular and Trade Reports for Nov. 27, 1911, and Jan. 6 and Feb. 6, 1912. Unless otherwise stated, the papers in the following lists are printed in Russian and the rates quoted are reduced to United States currency.]

**RUSSIA.****BATUM.**

[By Consul Alexander Heingartner.]

"The principal imports into this consular district are chemicals, machinery, manufactured goods, tea, tin plates, tin, lime, spelter, lead, and wine and spirits, while the leading exports are carpets and rugs, corn and flour, iron, licorice root, oil cake, petroleum products, silk, cocoons, skins, tobacco, and wool. There are no trade papers in the Caucasus. The leading newspapers are reported below. All of them are four-page papers, the first page being devoted almost entirely to advertising. A discount of 40 per cent from the rates quoted is allowed for advertising on the fourth page.

**Batum News**, Batum. Daily. Advertising rates, about \$51.50 per one-fourth column per month (column 2½ by 22½ inches). Annual subscription price, \$3.60. Circulation, 4,000.

**Transcaucasian Herald**, Tiflis. Daily. Advertising rates, about \$51.50 per one-quarter column per month (column 3 by 22½ inches). Annual subscription price, \$3.60. Circulation, 1,500.

**Tiflis News**, Tiflis. Daily. Advertising rates, about \$51.50 per one-quarter column per month (column 2½ by 22½ inches). Annual subscription price, \$2.50. Circulation, 10,000.

**Baku**, Baku. Daily. Advertising rates, about \$51.50 per one-quarter column per month (column 2½ by 25 inches). Annual subscription price, \$3.60. Circulation, 8,000.

**Caspian**, Baku. Daily. Advertising rates, about \$51.50 per month per one-quarter column (column 2½ by 22½ inches). Annual subscription price, \$4. Circulation, 8,000.

**MOSCOW.**

[By Consul General John H. Snodgrass.]

Cotton spinning and weaving constitute the most important industry in the consular district of Moscow. The principal exports from the district during 1910 were crash, furs, crude glycerin, hair, hides and skins, rubber, and wool. The following news and trade papers issued in the district might be used advantageously for advertising the various lines of American products:

**Russkoye Slovo**, Moscow. Leading daily newspaper, representing all lines of trade. Advertising rates, 45 cents per line (nonpareil) per insertion preceding reading matter; special rates for special positions and repeated insertions. Annual subscription price, \$3.50. Circulation, 200,000, of which 80,000 copies are distributed outside of Moscow, among all classes.

**Golos Moskvi**, Moscow. Daily newspaper, representing all lines of trade. Advertising rates, 30 cents per line (brevier) per insertion preceding reading matter. Annual subscription price, \$4.50. Circulation, 20,000, principally in Moscow and its manufacturing suburbs, among employees of mills, factories, and other industrial concerns.

**Russkiya Vedomosti**, Moscow. Daily newspaper, representing all lines of trade. Advertising rates, 30 cents per line (brevier) per insertion preceding reading matter; special rates for special positions and repeated insertions. Annual subscription price, \$5. Circulation, 55,000, of which 25,000 copies are distributed outside of Moscow. Articles are contributed to this paper from time to time by Moscow University professors.

**Utro Rossii**, Moscow. Daily newspaper, representing all lines of trade. Advertising rates, 30 cents per line (brevier) per insertion on the first page; special rates for special positions and repeated insertions. Annual subscription price, \$3.50. Cir-

culation, 35,000, principally in Moscow and its manufacturing suburbs, among employees of mills, factories, and other industrial concerns.

**Izvestia Moscovskago Obschestva Dila Nadsora Za Parovimi Kotlami, Moscow.** Monthly journal, representing the technical and mechanical industries where steam power and steam engineering are employed. Advertising rates, from \$3 per one-sixteenth page to \$17.50 per full page per insertion (type page 7½ by 11½ inches); special rates for special positions and repeated insertions. Annual subscription price, \$2.50. Circulation, 3,000, among employees of mills and factories, steam fitters, boiler makers, and technical engineering offices.

**Vyestnik Manufaktur i Promishlennosti, Moscow.** Semi-monthly journal, devoted to manufacture and industry. Advertising rates, from \$2.50 per one-eighth page to \$12.50 per full page per insertion following the text (type page 5½ by 9½ inches); special rates for special positions and repeated insertions. Annual subscription price, \$3. Circulation, 2,000, among employees of mills and factories and technical engineering offices.

**Automobilist, Moscow.** Semimonthly journal, devoted to the automobile industry. Advertising rates, \$2.50 per one-eighth page per insertion (type page 7 by 10 inches); special rates for special positions and repeated insertions. Annual subscription price, \$2.50. Circulation, 4,000, among those interested in the automobile trade.

**Bannee Outro, Moscow.** Daily newspaper, representing all lines of trade. Advertising rates, 35 cents per line (brevier) per insertion, first page. Annual subscription price, \$4. Circulation, 30,000, principally in Moscow and its manufacturing suburbs, among employees of mills, factories, and other industrial concerns.

**Volgar, Nijni-Novgorod.** Daily newspaper, representing all trades and industries of the Bi-Volga country. Advertising rates, 15 cents per line (brevier) per insertion on the first page, 6 cents per line on the fourth page. Annual subscription price, \$4. Circulation, 25,000, among employees of manufacturing and industrial firms.

**Saratovsky Vyestnik, Saratov.** Daily newspaper, representing all trades and industries of the Volga country. Advertising rates, 10 cents per line (brevier) per insertion, preceding the text; third and fourth pages, 3½ cents per line. Annual subscription price, \$3.50. Circulation, 20,000, among manufacturing and industrial firms.

**Volzhskoye Slovo, Samara.** Daily newspaper, representing all lines of trade. Advertising rates, 10 cents per line (brevier) per insertion, preceding the text; 5 cents per line following the text. Annual subscription price, \$3.50. Circulation, 15,000, among employees of mills, factories, and other industrial concerns of Samara and its manufacturing suburbs and the Volga country.

**Kazansky Telegraph, Kazan.** Daily newspaper, representing all lines of trade. Advertising rates, 20 cents per line (brevier) per insertion on the first page; fourth page, 10 cents per line. Annual subscription price, \$4.50. Circulation, 12,000, among employees of mills, factories, and other industrial concerns in Kazan and its manufacturing suburbs and the Volga country.

#### ODESSA.

[By Consul John H. Groat.]

Agricultural implements and machinery, coal, copra, raw cotton, ironware, jute, nuts, oranges and lemons, paints, raisins, rosin, wax, breadstuffs, oil cake, seeds, sugar, vegetables, wood, and wool were imported into the consular district of Odessa during 1910, and corn, glue, hides, oil, iron ore, rubber, tea, tobacco, and wool were exported therefrom. Agricultural implements and machinery form an important line of American trade in this region, and the manner in which several American agricultural implement houses have organized the trade and secured permanent footing should give a good example to other manufacturers whose lines would find a market here if properly presented.

Every town or city located within the Odessa consular district, which comprises a large part of southern Russia, is well supplied with news and trade papers, and in the matter of advertisements all seem to be well patronized. A large portion of the first page of the newspapers is devoted to advertising, and, unless otherwise stated,

the rates quoted for advertising in the following lists are for space on that page. The papers are generally printed in brevier type. Among the principal papers of the district the following may be mentioned as reliable and prominent publications:

**Odesski Listok**, Odessa. Daily newspaper. Advertising rates, 8 to 20 cents per line per insertion. Annual subscription price, \$5. Circulation, 13,000.

**Odesskiya Novosti**, Odessa. Daily newspaper. Advertising rates, 8 to 20 cents per line per insertion. Annual subscription price, \$5. Circulation, 16,000.

**Commercial Bulletin**, Odessa. Monthly journal, published by the Odessa Bourse, devoted to the local grain and other markets. Annual subscription price, \$5. Circulation, about 1,000.

**Kievskaya Mysl**, Kief. Daily newspaper, considered to be a good medium for advertisers. Advertising rates, for run of column, 15 cents per line per insertion; 8 cents per line for repeated insertions. Annual subscription price, \$5.50. Circulation, about 20,000.

**Kievskay Potshita**, Kief. Daily newspaper. Advertising rates, 25 cents per line per insertion. Annual subscription price, \$4. Circulation, about 10,000.

**Nikolaievskaya Gazeta**, Nicolaief. Daily newspaper. Advertising rates, 8 cents per line per insertion. Annual subscription price, \$3.50. Circulation, about 10,000.

**Troudovaya Gazeta**, Nicolaief. Daily newspaper. Advertising rates, 15 cents per line per insertion next to reading matter. Annual subscription price, \$2.50. Circulation, about 7,000.

**Yuzhni Krai**, Kharkof. Daily newspaper. Advertising rates, 15 cents per line per insertion; 7½ cents per line on the last page; discounts for large space. Annual subscription price, \$5.65. Circulation, about 24,000.

**Utro**, Kharkof. Daily newspaper. Advertising rates, 15 cents per line per insertion; 7½ cents per line on the last page; discounts for large space. Annual subscription price, \$4.65. Circulation, about 17,000.

#### RIGA.

[By Vice Consul Laurance Hill.]

Chalk, coal and coke, cotton, dyewoods, fertilizers, herrings, iron, jute, lard, lead, machinery, sulphur pyrites, and tanning woods are among the principal imports into Riga. The trade journals which might be used advantageously for advertising the various lines of American products are reported below:

**Rigaer Boersenblatt**, Riga. Daily commercial journal, published by the Chamber of Commerce and circulating among its members and the mercantile community. Advertising rates, 4 cents per line (brevier) per insertion (column 2¼ inches wide). Annual subscription price, \$7.50. Circulation, 600.

**Rigasche Industrie-Zeitung**, Riga. Semimonthly technical journal, organ of the Riga Technical Society, and publishing articles on technical subjects gathered from all countries. Its readers are the members of the Society, comprising technical directors and owners of large factories, architects, civil and mechanical engineers. Advertisements of special machinery and the like can not fail to attract the attention of interested persons, and it is considered that should American manufacturers contemplate bringing their lines to the notice of the provincial technical trade a better medium can not be found. Advertising rates, from \$2 per one-twelfth page to \$12.50 per full page per insertion (type page 7 by 10 inches); discount for repeated insertions. Annual subscription price, \$2.65. Circulation, 500.

#### ST. PETERSBURG.

[By Consul Jacob E. Connor.]

The principal industry in St. Petersburg is the manufacture of cotton textiles. The shipping of St. Petersburg increased from 1,996 ships, of 1,897,863 registered tons, entered in 1909, to 2,054 ships of 1,941,766 tons, in 1910. The principal articles of export during 1910 were oats, oil cake, fertilizers, wheat, rye, butter, and petroleum. The leading news and trade papers published in the district are given

below. (A newspaper directory of Finland was forwarded with the consul's report, and will be loaned to those interested upon request to the Bureau of Manufactures.)

**Mercator** (English, Swedish, and Finnish editions), Helsingfors, Finland. Devoted to commerce and circulating among business men, bankers, and importers and exporters. Advertising rates, \$7 per one-quarter page per insertion (type page 6 by 9 inches). Annual subscription price, \$5.

**Torgovo-Promyshlennaya Gazeta**, St. Petersburg. Daily newspaper, devoted to commerce, industry, and finance. Advertising rates, 25 cents per line (brevier) per insertion, first page; 10 cents per line last page. Annual subscription price, \$6.

**St. Petersburg Zeitung** (German), St. Petersburg. Daily newspaper, containing a commercial section. Advertising rates, 10 cents per line (brevier) per insertion, advertising page. Annual subscription price, \$7.

**Novoye Vremya**, St. Petersburg. Daily newspaper. Advertising rates, 90 cents per line (nonpareil) per insertion, first page; 50 cents per line last page. Annual subscription price, \$9.

**Nasha Okhota**, St. Petersburg. Semimonthly journal, devoted to hunting, shooting, and fishing sports. Advertising rates, \$2 per one-quarter page per insertion, after text (type page 5 by 8 inches). Annual subscription price, \$2.50.

**Automobile**, St. Petersburg. Semimonthly journal devoted to the automobile trade. Advertising rates, per one-eighth page (type page 7 by 10½ inches): One insertion, \$7.75; three insertions, \$19.25; six insertions, \$30.90. Annual subscription price, \$2.50.

**Aero**, St. Petersburg. Semimonthly journal devoted to the aeroplane trade. Advertising rates, per one-eighth page (type page 7 by 10½ inches): One insertion, \$5; three insertions, \$12.50; six insertions, \$22. Annual subscription price, \$2.50.

**Dvigatel**, St. Petersburg. Semimonthly journal devoted to the motor-vehicle trade. Advertising rates, per one-eighth page (type page 7 by 10½ inches): One insertion, \$5; three insertions, \$12.50; six insertions, \$20. Annual subscription price, \$4.

#### VLADIVOSTOK.

[By Consul Lester Maynard.]

Agricultural machinery, building material, cement, coal, drugs and chemicals, fruits, iron manufactures, metal ware, oil, provisions, rice, salt, and tea are the principal imports into this consular district. No trade papers are published in eastern Siberia.

**Dalny Vostok**, Vladivostok. Daily newspaper. Advertising rates, 13 cents per line (brevier) per insertion, first page. Annual subscription price, \$4.50. Circulation, about 2,000.

**Dalekia Okraina**, Vladivostok. Daily newspaper. Advertising rates, 13 cents per line (brevier) per insertion, first page. Annual subscription price, \$4.50. Circulation, about 1,200.

#### WARSAW.

[By Vice Consul Witold Fuchs.]

The manufactures of Warsaw include metallic wares, machinery, food products, chemicals, matches, spirits, shoes, and tobacco. The annual imports of American agricultural implements and machinery are estimated at \$900,000, typewriters about \$45,000, and wringers, hardware, and miscellaneous American goods at \$350,000 to \$400,000. Flax and tow, hair, and wool are the principal exports to the United States. (The name of an agent in Poland for American agricultural machinery has been submitted by the consul at Warsaw and will be furnished upon application to the Bureau of Manufactures.)

**Kurjer Warszawski** (Polish), Warsaw. Daily newspaper, morning and evening editions, established in 1821. Advertising rates, 8 cents per line per insertion. Annual subscription price, \$4.50. Circulation, 40,000.

**Nowa Gazeta** (Polish), Warsaw. Daily newspaper, morning and evening editions, established in 1864, containing latest stock-exchange quotations and special articles

on commercial matters: Advertising rates, 8 cents per line per insertion. Annual subscription price, \$4.50. Circulation, 18,000.

**Slowo** (Polish), Warsaw. Daily evening newspaper. Advertising rates, 15 cents per line (brevier) per insertion. Annual subscription price, \$3. Circulation, 22,000.

**Gazeta Rolnicza** (Polish), Warsaw. Illustrated weekly, established in 1860; official organ of the Central Agricultural Society of Poland, and is devoted to agriculture. Advertising rates, 8 cents per line (brevier) per insertion, before reading matter. Annual subscription price, \$4.50. Circulation, 3,500.

**Tygodnik Ilustrowany** (Polish), Warsaw. Illustrated weekly, devoted to art and literature: Advertising rates, 20 cents per line (nonpareil) per insertion, first page; 10 cents on other pages. Annual subscription price, \$4. Circulation, 23,000.

**Swiat** (Polish), Warsaw. Illustrated weekly journal of current events. Advertising rates, 15 cents per line (nonpareil) per insertion, before reading matter. Annual subscription price, \$4. Circulation, 23,000.

**Przegląd Techniczny** (Polish), Warsaw. Weekly technical journal. Advertising rates, from \$1 per one-sixteenth page to \$7.50 per page per insertion (type page 8 by 12½ inches); discounts up to 35 per cent for annual contracts. Annual subscription price, \$5. Circulation, 2,000.

**Wies Ilustrowana** (Polish), Warsaw. Monthly journal illustrating country life. Advertising rates, \$19 per one-fourth page per insertion before reading matter (type page 6½ by 9½ inches). Annual subscription price, \$5. Circulation, 5,000.

## EXPORTS FROM CALCUTTA.

[From official Indian Trade Journal.]

With the advent of the Tata Iron Works as a producer of pig iron, there has been a considerable increase in exports of this material from Calcutta. In April the quantity rose from 1,657,600 pounds to 8,637,096 pounds, of which 8,190,336 pounds went to foreign ports, chiefly Hongkong and Japan; during May there was a still further expansion. Cotton exhibited some development in April; the raw material rose from 2,557,072 pounds to 5,150,544 pounds, valued at \$551,540, going principally to Germany and Japan; cotton twist and yarn expanded from 77,200 to 399,600 pounds, of which 73.68 per cent went to China and Hongkong; cotton piece goods were only valued at \$940,860, but altogether cotton and its manufactures attained a value in the month of \$616,420. To Indian ports cotton twist and yarn rose from 477,544 pounds to 1,270,000 pounds. The demand from the West for both hides and skins is strong, and prices have advanced considerably; during April shipments rose in volume by 4.53 per cent, and the value of \$3,050,000 was greater by 20.56 per cent. The quantity of lac exported increased by 395,808 pounds to 4,314,912 pounds, but owing to lower prices the value, \$587,873, was actually smaller.

## Consular Correction.

Correcting the report on "Composition floorings of magnesium chloride," published in Daily Consular and Trade Reports on April 17, 1912, Vice Consul General E. H. L. Mummenhoff, of Hamburg, advises that the quotations on page 231 for "raw" magnesite should read "lump calcined" magnesite, and the quantity should be the metric ton of 2,204.6 pounds. He adds: "The price of raw magnesite quoted in Hamburg on May 10 was \$7 to \$7.50 per ton c. i. f. New York, the difference in price being caused by fluctuations in the rate of freight."

## The Bagdad Railway.

A Berlin dispatch from Constantinople states that the Turkish Ministry of Public Works, having finally approved the plans for the Mediterranean port of the Bagdad Railway at Alexandretta and the branch line from Toprak-kale to Alexandretta, work was begun at Alexandretta on June 10.

## FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 9004. Machinery for concentrating gold ore.**—An American consul reports that a company of European capitalists has two agents examining certain mining properties, with a special view to discovering copper, iron pyrites, and magnesite. These agents have come across some gold ore which, in the opinion of the mining engineer, would pay to develop. Samples of this ore will be assayed, and if the results are satisfactory work will be commenced immediately. The ore seems to be an alluvial deposit, composed of fine particles of quartz, sand, and clay. The mining engineer referred to has requested catalogues, price lists, and other particulars regarding machinery for concentrating gold ore.
- No. 9005. Disinfecting apparatus, pumps, and street-cleaning equipment.**—A foreign Government official is actively interested in all cholera preventatives and in ways and means of combating contagious diseases in general. At present a large city over which he has control is without spray pumps, stationary and portable steam disinfecting devices, street-sweeping machines, sheet-iron dump carts, etc. Catalogues embracing articles for purposes as above outlined should be sent to the American consul who furnished this information for transmission to the proper authorities.
- No. 9006. American goods of various kinds.**—A business firm has written an American consular officer that it would be pleased to receive from American manufacturers and exporters catalogues, price lists, terms, etc., of the following articles, in which it is particularly interested: Clocks, footwear, general provisions, salmon, biscuits, aluminum ware, cinematograph films, umbrellas, Panama hats, musical instruments, gramophones and accessories, lamps, lighting apparatus, confectionery, etc.
- No. 9007. Grain, lumber, tobacco, furniture, cotton goods, and hardware.**—An American consul reports that a commission agent whose firm has enjoyed a good reputation for many years desires to obtain catalogues, samples, and terms of sale for the agency of any or all of the following articles, for which there is a constant and growing demand in the country in question: Corn, wheat, wood for construction purposes, tobacco (Virginia and Kentucky) for cigarettes, cigars, and smoking, cotton cloth, iron and steel goods, hardware, furniture of all kinds, lard in pails (28 pounds each), soap, etc. The firm is prepared to furnish satisfactory references.
- No. 9008. Windmills and pumps.**—A communication has been received by an American consular officer in an Asiatic country from a business firm in his district requesting catalogues of American windmills and pumps. The firm is desirous of importing these articles, and would like to receive from American firms their best trade discounts.
- No. 9009. Railroad and harbor construction.**—An American consular officer has forwarded a report regarding a comprehensive plan of a foreign Government for railroad building, harbor construction, and other public works involving the expenditure of considerable sums of money. As a field for profitable investment the consular officer believes this proposition is particularly entitled to consideration and should receive the careful attention of American capitalists. The official in charge of this matter is favorable to American participation, and the time seems especially opportune for action. Further details can be obtained from the Bureau of Manufactures.
- No. 9100. Harbor works.**—Tenders will be received by the Town Council, Reykjavik, Iceland, until August 31, 1912, for the construction of a harbor at that port, including the construction of three moles, two steamboat piers, and dredging works.
- No. 9101. Railway rolling stock.**—The Italian State Railways, Rome, Italy, invite tenders for 200 carriages (49 first, 97 second, and 54 third class), 2,000 wagons type F, and 1,800 wagons type L, half with and half without brakes, and 100 open trucks. Tenders will be accepted through local agents only.

## TRADE OF BRITISH INDIA PORTS.

### BOMBAY.

[By Consul Edwin S. Cunningham.]

The Bombay consular district includes the Bombay Presidency, exclusive of Sind, with an area of 79,768 square miles and a population of 15,304,677; the native states within this limit, with an area of 62,939 and a population of 7,262,430; the dominion of the Nizam of Hyderabad, with an area of 82,698 square miles and a population of 11,141,142; and the Portuguese possessions of Goa, Daman, and Diu, with an area of 1,470 square miles and a population of 531,798. Within the British Presidency proper are the cities of Bombay, population 979,445; Ahmedabad, 185,889; Poona, 153,320; Surat, 119,306; 5 others with over 50,000; and 297 with over 5,000 population. The population of the British district is very dense, ranging from 160 per square mile in the central division to 256 per square mile in the northern division, but the density of population is no criterion of the commercial and industrial importance of western India, as the people are poor and have few wants.

Three-fourths of the population of the Presidency are dependent on agriculture, which is conducted by primitive methods. During the fiscal year ended March 31, 1911, the cropped area in Bombay Presidency was 24,236,480 acres, of which 19,000,000 acres were devoted to food crops and the rest to cotton. The principal crops are rice, wheat, barley, millet, ragi, corn, and a few other cereals and pulses, cotton, sugar cane, tobacco, sesamum seed, linseed, safflower, rapeseed, groundnuts, etc. Cotton is by far the most valuable product. The average yield per acre of clean rice is 1,050 pounds; wheat, 533 pounds; barley, 680 pounds; and corn, 869 pounds.

### Increased Industrial Activity—General Foreign Trade.

The number of active factories in the district was increased from 520 to 548 during the fiscal year 1910-11, of which 431 were connected

with the cotton industry. In 1911 there were 86 cotton mills in the city of Bombay, employing 104,550 hands, and 98 more in the Presidency outside the city, employing 55,251 hands. In the various factories 10,816 children were employed.

The total foreign and coasting trade of the Bombay Presidency amounted to \$610,921,501 in 1910-11 against \$538,869,510 in the preceding year. Almost all of this trade passes through the port of Bombay, that city's share being divided as shown in the following table:

Trade.	1909-10	1910-11	Trade.	1909-10	1910-11
<b>Imports:</b>			<b>Coasting trade:</b>		
Foreign merchandise.....	\$128,217,894	\$153,575,010	Imports.....	\$40,385,476	\$50,035,324

<b>Total foreign trade.</b>	<b>421,406,143</b>	<b>481,854,752</b>			

NOTE.—In this table, and in the 1910-11 statistics in the other tables of this report the rupee has been converted at 32.44 cents. In the tables of imports and exports by articles, the figures for 1909-10 were converted on the basis of 33½ cents, causing a slight exaggeration in the figures for that year.

In point of the distribution of trade the United Kingdom and British possessions remained in practically the same position as in 1909-10. Their combined share in the trade of Bombay was 43.15 per cent, that of the United Kingdom alone being 31.69 per cent. The trade of Bombay with the countries of continental Europe shows a larger proportionate increase, effected chiefly at the expense of China and Japan. The aggregate share of the Continental countries rose from 27 to nearly 32 per cent of the total trade of the port.

#### Transshipment Trade—Movement of Treasure.

The increase in the reexports of foreign merchandise indicates renewed trade activity between Bombay and the ports of the Persian Gulf and the East African littoral. Some alarm had been felt as to Bombay's position as an entrepôt, as it appeared some years ago to be losing some of this trade through the establishment of direct lines, but returns began to show an improvement three years ago. The bulk of the reexports consists of sugar, metals, provisions, and apparel, and their destinations are the Persian Gulf, Arabia, Asiatic Turkey, and the East African littoral. Reexports to Europe represent only about 20 per cent of this trade.

The imports of gold coins amounted to \$38,784,728, a decrease of \$1,815,140 from the 1909-10 figures, while the imports of bar, bullion, and other gold showed a gain of \$12,628,794, and amounted to \$36,904,754. The increase in the exports of treasure was chiefly due to large shipments of sovereigns. Taken in connection with a slight decrease in the net consumption of silver, the increase in the importation of bar gold leads to the belief that it is displacing silver as a form of hoarding in India. The imports of silver showed a slight decrease and the exports a small increase. Most of the

bar gold imported came from England, the rest being sent from Australia.

### General Import Statistics.

The values of the articles imported into Bombay, exclusive of treasure and Government stores, during the two years ended March 31, 1911, are shown by the following table:

Articles.	1909-10	1910-11	Articles.	1909-10	1910-11
Animals, live.....	\$444,520	\$1,146,859	Ivory.....	\$1,031,544	\$990,064

### Successful Agricultural Year—Labor.

The agricultural season of 1910-11 was successful, being the third in succession of a series of good monsoons, and the crops yielded bountifully from a slightly increased acreage. The production of cotton, owing to frost in the northern districts, was only slightly above that of the preceding year, although the acreage was increased from 3,740,000 to 4,239,000, but the higher price realized more than compensated for the small yield per acre. The food crops were above normal. An increased acreage of wheat produced 40,000 tons more than the previous crop. The area planted to sugar cane decreased by 2,000 acres, while that under tobacco remained practically the same, increasing in districts especially adapted to its cultivation and decreasing in others. The area under cultivation for oilseeds increased 53,000 acres.

Labor was in general demand, at slightly higher wages. Every industry showed satisfactory results except the cotton mills, which had one of the most unfortunate years in their experience, owing to outside influences. Some 25 mills on the island of Bombay shut down and others curtailed their forces or cut down the number

of hours. Some of the mills were forced into liquidation. The resulting throwing out of work of many wage earners would have been serious had it not been for the strong demand for labor in other lines. As it was, the burden fell heaviest on the capitalists who were unable to pay the high price for cotton to keep their mills running.

**Refined Sugar—Metals and Machinery—Tobacco Imports.**

Receipts of beet sugar declined, while Mauritius sugar practically regained its hold on the Indian market during 1910-11, which was thought to have been threatened by imports from Java during the preceding year. These two countries supplied practically the entire importation, valued at \$12,246,258, although small shipments were received from Austria and Hongkong. The high prices of sugar continued in 1910 until the publication of the forecast of the beet crop and broke in September.

Increases were shown in the imports of all the principal items of metals and manufactures of metal except millwork and machinery, in which a decrease was caused by the smaller imports of textile machinery. The increases in the other items were due to larger shipments, often at lower prices, rather than to increases in price. Of the total imports of cutlery, sewing machines, agricultural and other implements, enameled ironware, lamp ware, and other hardware, aggregating \$3,862,228, the United States supplied \$192,102 and the United Kingdom \$2,127,475. The imports of textile machinery decreased from \$3,668,099 in 1909-10 to \$2,482,778 in 1910-11. Since railways are now being built for the development of the country, the increased imports of railway material indicate the satisfactory industrial condition of the Empire.

As 1910-11 was the first year since the increase of the duty on tobacco, the imports of this article are of interest. The total imports of tobacco dropped from 738,481 pounds, valued at \$490,796, in 1909-10 to 349,739 pounds, valued at \$340,353. Unmanufactured tobacco disappeared entirely from the imports from the United Kingdom, although 5,610 pounds came from the United States. A low-priced grade of cigarettes had been supplied by the United States, and the higher duty caused a decline in these from 62,181 pounds of American cigarettes in 1909-10 to 1,372 pounds in 1910-11.

**Effect of Tariff on Oil Imports—Raw Materials—Cotton Imports.**

Notwithstanding a duty of 3 cents per gallon which went into effect in 1910-11, the imports of foreign kerosene increased from 19,718,457 gallons, valued at \$2,423,974, in 1909-10, to 20,445,668 gallons, valued at \$2,637,917. Kerosene forms the most important item in the imports from the United States, and the receipts of the American product rose from 12,782,457 gallons, with a value of \$1,564,531, to 13,231,063 gallons, valued at \$1,606,567. The increase in the imports of foreign oil was insignificant, however, when compared with the gain from 11,050,224 gallons, valued at \$1,648,931, in 1909-10, to 16,308,773 gallons, valued at \$2,304,304, in 1910-11, made by the imports of duty-free Burma kerosene.

Among the raw materials decreases were noted in coal, cotton, and silk, and increases in timber, wool, raw hides, and skins. The de-

creased imports of coal from the United Kingdom and Natal were accompanied by an increase in the consumption of Calcutta coal.

Overimportation in the preceding year and the increased local production accounted for the decrease in the imports of cotton twist and yarn. During 1910-11 Japan appeared for the first time as a supplier of cotton yarn for India, furnishing 293,837 pounds, valued at \$122,610, of which 83,600 pounds were mule yarn above No. 50, and the balance unspecified. Unlike yarns, the imports of piece goods increased greatly, prints and colored goods showing the greatest gains. The imports of cotton goods during 1909-10 and 1910-11 are shown in the following table:

Classification.	1909-10		1910-11	
	Quantity.	Value.	Quantity.	Value.
	Yards.		Yards.	
Colored.....	181,000,000	\$11,029,089	238,000,000	\$15,062,230
Gray.....	177,000,000	7,989,696	198,000,000	9,774,764
White.....	162,000,000	7,942,715	197,000,000	10,326,600

The Japanese met the local requirements in cotton hosiery and had almost a monopoly in that trade.

#### Small Imports of American Shoes—Carriages and Motor Cars—Other Imports.

Of 657,776 pairs of shoes imported during 1910-11 the United States supplied only 421 pairs, an indication that this market has not been exploited by the American manufacturers as fully as those in other parts of the world. The consumers of imported shoes here are not very different from those living in places where the American article is in particular demand. The imports of shoes were from the following countries, in pairs: United Kingdom, 327,692; Austria-Hungary, 127,074; Japan, 8,821; Germany, 55,927; Spain, 18,984; Italy, 31,731; Norway, 4,080; Sweden, 3,136; France, 1,880; and Belgium, 1,494.

The increase in the imports of carriages and motor cars was largely due to the increased demand for automobiles and motor cycles. Of a total of \$1,659,377, the United States supplied \$31,366, which practically represents only its share in the automobile trade.

In clocks and watches the imports from the United States amounted to \$43,063; in leather goods, excluding boots and shoes, \$29,351; in paints and colors and painters' materials, \$14,375; and in wood, \$6,607. Of the total imports, the United States furnished only \$3,415,557, a mere fraction of the amount which it could supply if this huge market was properly exploited.

#### Review of the Export Trade.

While the exports of Indian goods did not show as great a percentage of increase as did the imports, they indicate great prosperity in this Presidency. The principal increases were in raw materials and unmanufactured articles, the increased value of the raw cotton shipments representing almost one-half of the total increase. The exports of seeds and of cotton twist and yarn also exceeded the \$25,000,000 mark. A comparison of the values of the principal

exports in the fiscal years 1909-10 and 1910-11 is given in the following table:

Articles.	1909-10	1910-11	Articles.	1909-10	1910-11

Myrobolans.....	1,315,092	1,538,364			

#### Grain Exports—Manganese Ore—Dyestuffs and Tanning Materials.

Grain and pulse, the most important item of food products among the exports, showed a considerable decrease in 1910-11. Wheat is sold principally to the United Kingdom, while large quantities reach France and other European countries. Wheat flour showed a decided increase in exports, going chiefly to the Red Sea, Turkey, Aden, Ceylon, Egypt, and in smaller quantities to British East Africa, Zanzibar, Persia, Germany, and German East Africa, in the order named. The quantities exported during the past two years are shown in the following table (hundredweight = 112 pounds):

Classification.	1909-10	1910-11
Wheat.....	Cwt. 2,247,183	Cwt. 2,579,406
Flour, wheat.....	424,586	486,645
Rice.....	685,711	696,120
Gram.....	120,979	47,848
Other.....	858,049	731,722

Most of the exports classed as metals consisted of manganese ore, of which 8,989,768 hundredweight, valued at \$2,366,680, were exported during the fiscal year 1910-11, against 7,651,972 hundredweight, valued at \$2,070,928, in 1909-10. Of the exports in 1910-11, the United Kingdom took 3,006,163 hundredweight, the United States 2,123,000, Holland 2,000,605, and Belgium 1,461,000 hundredweight. The ore is used chiefly for the manufacture of steel, and this export is gaining not only with the general trade revival, but also with the increased use of steel. The shipment of this ore has insured the sailing of an average of one vessel a month direct to the United States. These vessels carry whatever general cargo is offered, as well as the ore. With the ore trade as a nucleus, the establishment of more regular sailings from this port to the United States might be worthy of consideration by persons interested in the trade between the United States and India.

The United States took 167,577 hundredweight of myrobolans, valued at \$226,422 and 744 hundredweight of turmeric, valued at \$3,306, out of total exports of 1,129,300 hundredweight of myrobolans and 37,296 hundredweight of turmeric. The myrobolan trade with the United States is capable of considerable expansion.

**Good Trade in Raw Cotton and Piece Goods—Yarns Weak.**

The exports of raw cotton showed a slight decline in quantity, the total being 6,213,317 hundredweight in 1909-10 and 6,188,890 hundredweight in 1910-11, but the value rose from \$74,967,357 to \$84,820,711. Prices ruled high and mill owners found the year depressing, as cotton manufactures did not show a corresponding rise. Good broach cotton ranged in price from 9.8 to 13.56 cents per pound in 1909-10 and from 11.72 to 15.26 cents in 1910-11 at Bombay. The distribution of the cotton exports during the two fiscal years is shown by the following table:

Countries.	1909-10	1910-11	Countries.	1909-10	1910-11
	<i>Cwt.</i>	<i>Cwt.</i>		<i>Cwt.</i>	<i>Cwt.</i>
United Kingdom.....	243,000	271,000	Germany.....	624,000	805,000
Austria-Hungary.....	521,000	541,000	Italy.....	656,000	882,000
Belgium.....	563,000	654,000	Japan.....	2,688,000	2,272,000
France.....	408,000	302,000			

The shipments of cotton yarn and twist were 37,762,231 pounds below those of 1909-10. There was an increase in the production of yarn and twists of counts above 26s, but the total output of all counts below that decreased. China purchased the greatest amount of yarn and twist and the exchange value of the tael is said to have been against India during the entire year. As, however, the exports to Hongkong increased in both value and quantity, it is doubtful if exchange affected the exports as much as the high prices of cotton. The exports were also affected by shortage in the manufacture of certain kinds that are exported to various parts of China by Japanese competitors and by the diminution of the Chinese demand on account of famine.

While yarn and twist declined, the shipment of manufactured cotton improved, and the exports of cotton piece goods reached the highest figures on record. Indian cloths are always in demand and compete to a certain extent in quality and kind with those manufactured in other parts of the world. The foreign markets for these goods are small in comparison with the total local output. During 1910-11 the total production of woven goods was 860,000,000 yards, of which about 75,000,000 yards were exported. Gray piece goods made up 55,218,823 yards of the total exports. The foreign market is found almost entirely on the East African littoral.

**Heavy Shipments of Seed—Hides and Skins.**

More than half of the seed exports of India go through Bombay, and the total exports during the year under review amounted to 17,019,414 hundredweight, against 13,973,536 hundredweight in 1909-10. Seed shipments to the United States were: Castor, 51,421 hundredweight; linseed, 27,000 hundredweight; mustard, 600 hun-

dredweight; rape, 500 hundredweight. The United Kingdom, France, and Belgium purchased more than 75 per cent of the total exports.

The United States was the principal purchaser of skins from Bombay, taking 2,143,826 goat and 39,150 sheep skins during 1910-11 of the total exports of 2,666,284 skins. Only 400 hides were taken by the United States, probably on account of the existence of anthrax in India during this period, as the quarantine laws would reduce the quantity shipped direct to America.

#### Imports from the United States.

The imports into Bombay from the United States during the fiscal years 1909-10 and 1910-11 are shown in the following table:

Articles.	1909-10	1910-11	Articles.	1909-10	1910-11
Agricultural implements and machinery	\$1,120	\$2,296	Hides and skins, dressed	\$4,421	\$4,936
Ale, beer, etc.	207	834	Implements and tools	8,075	17,390
Arms and ammunition	5,612	5,158	Instruments:		
Automobiles and motor cycles	15,050	28,631	Electrical	1,572	1,725
Bicycles	194	457	Musical	8,581	13,795
Books	6,718	11,283	Optical	1,790	2,685
Boots and shoes	1,613	866	Scientific	5,815	7,340
Building material	2,187	4,313	Surgical	5,180	5,964
Carriages and carts	2,986	2,278	Leather, and manufactures of	18,302	32,045
Clocks and watches	49,969	43,064	Machinery and millwork	33,652	106,619
Confectionery	1,780	2,600	Metals, and manufactures of:		
Cotton, and manufactures of:			Steel	31,978	236,328
Raw	3,375	42,173	Other	4,722	27,432
Piece goods—			Oils:		
Colored	41	1,683	Kerosene	1,564,531	1,006,567
Gray	407,246	329,561	Lubricating	305,557	270,313
White	2,839	1,080	Other	60,204	73,696
Cutlery and plate	4,763	14,356	Paints and colors	11,337	14,375
Drugs and medicines:			Paper and pasteboard	5,641	8,322
Proprietary and patent medicines	31,142	32,160	Printing material, etc.	6,913	5,563
Quinine	23	11,875	Provisions	16,751	15,240
Other	7,731	11,018	Soap	9,470	13,697
Engines:			Sewing machines	13,017	23,256
Electrical	5,582	6,189	Spirits	51,465	51,567
Mining	3,900	.....	Stationery	18,413	19,034
Steam	316	5,753	Tobacco, and manufactures of:		
Textile	31	3,350	Cigarettes	20,839	603
Foodstuffs	2,351	4,751	Cigars	.....	.....
Fruits and vegetables	630	635	Other	17,312	7,173
Furniture, etc.	9,407	11,502	Toys, etc.	15,700	30,620
Glass and glassware	2,354	2,854	Typewriters	26,337	35,454
Gums and resins	23,271	7,854	Wood, manufactures of	2,520	6,607
Hardware	77,989	115,157	All other articles	45,614	.....
Haberdashery and millinery	4,780	6,633	Total	3,011,120	3,417,653

There are opportunities here for the sale of light hardware and light agricultural implements and machinery. The people here can not manage the heavy machinery which is so well adapted to conditions in the United States and most other parts of the world, nor are the small farms suitable for its use. Light machinery and tools may be sold if properly introduced, but should be protected by patent.

Bombay seems to offer a good opening for an American shoe shop handling ladies' and gentlemen's shoes of medium price. The most expensive kinds would not find a sale. The merits of American shoes are well known and recognized by Parsees and others, as well as by the European residents. At present shoes are extensively manufactured on a small scale by native shoemakers. Many shoe shops here carry what they call American shoes, claiming that they are made on American lasts and are American style, although made in some other country.

**Exports to the United States.**

The exports to the United States during the calendar years 1910 and 1911, as invoiced at this consulate, were as follows:

Articles.	1910	1911	Articles.	1910	1911
Carpets and rugs.....	\$87,066	\$83,840	Herbs.....	\$18,785	\$34,532
Capsicum.....		48,074	Hides and skins.....	924,175	1,210,374
Condiments, etc.....	8,510	9,914	Mace.....	11,021	1,275
Cotton, and manufactures of:			Nuts:		
Raw.....	248,849	62,217	Cashew.....	41,443	65,743
Piece goods.....	111	5,536	Myrobolans.....	261,343	196,601
Waste.....	76,627	109,167	Oils.....	18,795	13,349
Yarn.....	8,668	4,601	Ore, manganese.....	626,867	403,370

Kadaya.....	13,494	28,673	All other articles.....	16,644	14,810
Other.....	12,844	19,509	Total.....	2,514,067	3,503,626

**Shipping.**

The clearances from the ports of the Bombay Presidency during 1910-11 numbered 593 steam vessels, of 1,651,026 tons, and 133 sail ships, of 16,419 tons, as compared with 571 steam, of 1,587,145 tons, and 105 sail, of 11,671 tons, in 1909-10. No vessel flying the American flag visited this port during the year. An increase in the steamer entrances and clearances in the coasting trade and a decrease in the number of sailing vessels seem to indicate that the coasting trade of Bombay is being carried on more by steam vessels than in former years.

**KARACHI.**

[By Consul Stuart K. Lupton.]

From a trade standpoint 1911 was a record year for the Karachi consular district, both imports and exports having exceeded all previous records. The wheat, cotton, and oilseed crops were good and the exportation of all these commodities was heavy. The total private trade, exclusive of Government transactions, was \$123,767,075, of which \$44,749,844 was imports and \$79,017,231 exports. The imports in 1910 amounted to \$38,805,659 and the exports to \$69,873,772. The principal items entering into the export trade in 1911 were as follows (ton = 2,240 pounds):

Articles.	Quantity.	Value.	Articles.	Quantity.	Value.
Bones..... tons..	23,647		Hides and skins..... tons..	5,096	\$2,562,327
Chromite..... do..	3,939	\$47,162	Rapeseed..... do..	170,255	7,627,115
Cotton..... bales..	250,218	12,407,406	Wheat..... do..	1,062,723	33,732,018
Gingelly (sesame)..... tons..	33,308	2,122,121	Wool..... do..	19,928	6,747,170

**Review of Import Trade.**

Sugar was, as usual, one of the most important imports, amounting in 1911 to 140,094 tons, valued at \$9,519,932, an increase of 25,579 tons and \$1,795,859 over the preceding year. Most of the sugar imported here is cane sugar from Mauritius and Java, although the imports of beet sugar from Germany, Austria, and Russia are increasing each year. The importation would have been much larger had

not several cargoes consigned to Karachi been sent direct to Europe without being entered, owing to the sudden rise in European prices.

Metal imports showed a satisfactory increase over 1910, with the exception of brass and lead, which declined slightly. Steel imports showed an advance of 9,989 tons over the 1910 figures, one great cause of the gain being the increased use of steel beams in buildings, owing to the increased cost of wood.

In spite of the increased duty on kerosene, the foreign oil imports showed an increase of 2,058,167 gallons over 1910. The imports of Indian oil rose from 2,997,898 gallons, valued at \$387,214, in 1910, to 3,897,648 gallons, valued at \$471,318, in 1911.

Cotton manufactures make up a large portion of the imports of this port, but only a relatively small share of these imports consist of twist and yarn for the use of mills in the Punjab. Indian gray or unbleached piece goods have almost displaced the foreign article. In addition to the direct imports from abroad, there were also brought in cotton goods to the value of \$15,054,723 by coasting vessels, as follows:

Articles.	Foreign.	Indian.
Twist and yarn.....	\$78,360	\$1,020,419
Piece goods:		
Colored.....	989,306	2,249,338
Gray.....	540,862	6,990,740
White.....	1,421,983	743,258
Other.....	71,792	95,648
Total.....	3,052,335	12,002,388

Owing to increased port charges at Karachi, the Northwestern Railway made arrangements to avoid shipping its coal by way of this port, this being largely responsible for the decrease of 179,534 tons in the total coal imports. In addition to the foreign coal imported, 244,141 tons of Indian coal, valued at \$1,021,971, were brought in, as compared with 420,799 tons in 1910. The quantities and values of the leading imports of foreign merchandise during the calendar year 1911 were as follows:

Articles.	Quantity.	Value.	Articles.	Quantity.	Value.
Coal and coke..... tons..	13,998	\$373,192	Kerosene..... gallons..	10,096,670	\$1,522,076
Metals:			Cotton, and manufactures of:		
Brass..... tons..	146	59,521	Twist and yarn.....		709,753
Copper..... do..	1,057	393,687	Piece goods—		
Iron..... do..	7,491	456,895	Colored.....		6,145,761
Lead..... do..	185	20,729	Gray.....		2,275,780
Steel..... do..	46,959	1,795,925	White.....		7,594,852
Zinc..... do..	107	22,217	Other.....		376,676
Other..... do..	87	59,979	Sugar..... tons..	140,094	9,549,932

#### Government Trade.

The customs returns give the Government imports during the fiscal years 1909-10 and 1910-11 as follows:

Articles.	1909-10	1910-11	Articles.	1909-10	1910-11
Arms, ammunition, etc...	\$223,875	\$395,194	Metals:		
Canvas.....	84,956	19,933	Steel.....	\$175,811	\$310,294
Carriages and carts.....	39,513	6,522	All other.....	19,815	75,375
Cement.....	29,945	48,896	Rails, etc.....	1,076,063	595,441
Coal, coke, etc.....	95,152	45,666	Railway carriages, etc.....	1,441,959	599,799
Hardware and cutlery.....	226,839	157,626	Sleepers:		
Instruments.....	151,273	152,055	Wooden.....	481,821	59,994
Locomotives, etc.....	2,420,740	844,910	Other.....	399,134	223,638
Machinery and millwork.....	278,570	268,937	Unmanufactured articles.....	54,885	66,908
Metals:			All other articles.....	572,801	525,336
Copper.....	54,180	53,464	Total.....	8,436,925	5,002,771
Iron.....	115,089	103,184			

In addition to the foregoing, treasure to the amount of \$48,011 was imported in 1909-10 and \$2,919 in 1910-11.

**Imports During the Fiscal Year.**

According to the customs returns, the private imports into the port of Karachi during the two years ended March 31, 1911, were as follows:

Articles.	1909-10	1910-11	Articles.	1909-10	1910-11
Animals, live.....	\$3, 209	\$6, 010	Metals, and manufacture:		
Apparel.....	638, 376	837, 617	of:		
Arms, ammunition, etc.....	65, 140	123, 188	Hardware, cutlery,		
Books and printed matter.....	37, 942	42, 690	and plated ware....	\$568, 894	\$799, 373
Building material.....	104, 784	103, 574	Metal.....	2, 114, 409	2, 148, 146
Chemicals, drugs, and			Machinery and mill-		
narcotics.....	848, 949	713, 523	work.....	606, 540	607, 823
Coal.....	69, 923	75, 400	Railway stores and		
Cotton manufactures:			rolling stock.....	1, 914, 704	279, 289
Twist and yarn.....	443, 580	465, 996	Oils.....	1, 552, 997	1, 282, 889
Piece goods--			Paper.....	204, 502	251, 736
Gray.....	1, 806, 816	1, 597, 110	Precious stones and pearls	13, 560	24, 979
White.....	4, 337, 364	7, 326, 175	Seeds.....	3, 200	4, 106
Dyed and prints.....	3, 998, 234	6, 131, 417	Silk, manufactures of.....	124, 902	130, 114
Other.....	336, 185	410, 027	Vehicles.....	151, 373	193, 101
Earthenware and porcelain			Wood, and manufactures		
Flax.....	47, 954	56, 910	of:		
Foodstuffs and drinks:	26, 935	29, 707	Furniture.....	69, 335	56, 980
Grain.....	4, 967	2, 873	Other.....	128, 905	59, 204
Hops.....	7, 955	12, 156	Wool, and manufactures		
Liquors.....	663, 500	685, 851	Oil		
Provisions.....	868, 532	1, 021, 717	Raw.....	12, 004	11, 169
Sugar, etc.....	7, 897, 172	8, 449, 949	Manufactured.....	788, 966	1, 003, 075
Spices.....	14, 094	9, 669	All other articles.....	1, 286, 105	1, 315, 060
Glass.....	268, 493	330, 320	Total.....	32, 342, 662	37, 383, 892
Instruments and apparatus.....	157, 102	165, 571			

The total foreign trade of Karachi in 1910-11 amounted to \$106,-001,084, of which \$57,887,174 was with the United Kingdom, \$10,-077,270 with Germany, \$7,680,240 with Belgium, \$7,932,588 with France, \$3,270,470 with Austria-Hungary, \$1,529,948 with Italy, \$9,315,615 with Asiatic countries, and \$2,112,241 with Africa, the rest being scattered.

**Trade with the United States.**

According to the customs statistics, the imports into Karachi from the United States were as follows:

Articles.	1909-10	1910-11	Articles.	1909-10	1910-11
Cabinet ware.....	\$3, 698	\$313	Instruments and apparatus:		
Chemicals and drugs.....	5, 467	4, 624	Electrical.....	\$1, 315	\$1, 476
Clocks and watches.....	5, 958	6, 940	Musical.....	420	1, 072
Foodstuffs and drinks:			Other.....	879	1, 187
Farinaceous foods.....	5, 341	8, 041	Oils:		
Hops.....	3, 113	.....	Kerosene.....	1, 023, 187	710, 440
Other.....	5, 732	5, 302	Lubricating.....	80, 709	6, 744
Metals, and manufactures of:			Other.....	3, 085	8, 441
Hardware and cutlery.....	17, 494	36, 039	Piece goods, gray.....	221, 889	215, 040
Machinery--			Soap.....	1, 297	2, 391

Steel.....	48	8, 536			
All other.....	32	120			
Other.....	6, 187	19, 205			

The increase in exports to the United States declared at this consulate during the calendar year 1911 was small but healthy. The 1910 exports showed a large gain over those of 1909, but a large part of this gain was accounted for by heavy shipments of cotton, on account of the shortage in the United States. In 1911 the increase

in the shipments of wool, due to the work of an American house that has its own staff here, made up for the deficiency in cotton. This trade may be counted on to increase. Shipments of hides were about one-half those of 1910, owing to a fear of the possibility of anthrax. Skin shipments showed a slight reduction. The following table shows the values of the principal exports to the United States as invoiced at this consulate during the calendar years 1910 and 1911:

Articles.	1910	1911	Articles.	1910	1911
Asafoetida.....	\$380	\$4,922	Wool.....	\$146,120	\$463,592
Carpets.....	754		All other articles.....		2,147
Cotton.....	263,537	11,165			
Hides.....	70,547	35,734	Total.....	2,076,915	2,093,355
Skins:					
Goat.....	1,355,921	1,246,536			
Sheep.....	249,638	329,200			

There were no exports from Karachi to any of the insular possessions of the United States during 1911. Direct cargo for the United States was shipped from Karachi in December, 1911, for the first time since the establishment of this consulate.

#### Success of American Agents—Trade Prospects.

American traveling men are beginning to come into this district. Two men who have each made two or more trips to Karachi have found the trade profitable. One of these men, handling a line of files, stated that his sales rose from about 1,700 dozen on his first trip to 5,000 dozen on his third trip, showing that American salesmen can sell goods in India if they are willing to work for the trade.

The business prospects for 1912 are not good. This is essentially an agricultural district, depending upon exports of wheat, oilseeds, cotton, and wool for its prosperity. Late crop reports for the whole of the Bombay Presidency indicate that the crop will be about 25 per cent less than that of 1911, and 10 per cent below the average of the past 10 years, while the Punjab shows a decrease of 19 per cent from last year. Both Sind and the Punjab show a decrease in the acreage under wheat. Rape and mustard seed are about 5 per cent less than the average for the past five years. There is a noticeable tendency on the part of cultivators and others to hold wheat for higher prices, which does not seem advisable on account of the bumper crops in Argentina and elsewhere.

#### Report of Port Trust—Shipping.

The annual report of the Karachi Port Trust for 1911 states that its revenue amounted to \$1,149,614 and its expenditure to \$1,024,194, leaving a surplus of \$125,420, exceeding the best previous record by \$83,123. The number of vessels entering the port during the fiscal year was 3,211, with a tonnage of 1,748,655, of which 898 were steamers, with a tonnage of 1,648,656. The American flag was seen in the harbor once, the first time in six years.

There are now berths for 18 vessels alongside wharves and room for 19 more at moorings in the stream. It seems that the port trust has definitely decided against the use of grain elevators, as it has increased the space available for stacking grain to 300,000 square yards. An application from a local firm for space for the erection of an elevator was refused by the trustees.

**NEW ZEALAND TRADE RECORD.**

[From Consul General Wm. A. Prickitt, Auckland.]

The appended table shows the trade of New Zealand with the principal countries of the world for the quarters ended March 31, 1911 and 1912. The value of imports in 1912 was the highest on record for the March quarter, being over \$4,500,000 greater than a year ago and nearly \$8,800,000 in advance of 1910. Exports increased by about \$5,000 over the corresponding quarter of 1911, but declined by \$3,000,000 as compared with 1910.

Countries.	Imports.		Exports.	
	1911	1912	1911	1912
United Kingdom.....	\$14,740,560	\$17,658,061	\$34,435,948	\$33,412,310
British possessions.....	4,623,313	4,763,339	3,632,063	3,820,631
Foreign countries:				
United States.....	1,446,783	2,490,327	838,374	1,057,497
Germany.....	529,429	755,103	606,227	976,340
France.....	181,229	176,423	100,855	351,329
Belgium.....	176,238	211,104	124,868	91,042
Balance of Europe.....	306,540	431,816	14,794	16,456
All other.....	271,586	329,775	236,539	267,300
<b>Total.....</b>	<b>22,245,678</b>	<b>26,815,968</b>	<b>39,988,668</b>	<b>39,992,906</b>

The money market is not easy, but as yet there is no pinch. The banks are not extending their loans and are cautioning their customers to be very conservative.

**AUTOMOBILE RACE IN SICILY.**

[From Consul Hernando de Soto, Palermo.]

The automobile race around Sicily announced in Daily Consular and Trade Reports for May 14, 1912, was won by a 40-horsepower automobile of the Società Ceirano Automobili, Torino, which covered the distance of 1,050 kilometers (652 miles) in 27 hours, 12 minutes, and 43 seconds; a Lancia car was second and a F. I. A. T. third. In all, 26 machines started from Palermo, representing 16 different makes, among which were 3 American cars, Ford, Overland, and Metz. Other well-known makes in the contest were Mercedes, de Dion & Bouton, Isotta, Deutz, Itala, Alfa, and Sigma.

The small 20-horsepower Ford did comparatively well, as it came in sixth, while the Overland, although delayed on account of frequent exchange of tires, was the only car that resisted the jolting over the bad Sicilian roads without a spring being broken or a screw loosened. The high degree of durability shown by the American machines in this race has attracted much attention, which undoubtedly will lead to an increase in the sale of American-made automobiles in Sicily.

**The British Capitalists in Canada.**

Consul M. J. Hendrick, of Moncton, New Brunswick, advises that the touring British manufacturers and capitalists, announced in Daily Consular and Trade Reports for June 6 as making a close study of the Canadian industrial field, are being entertained by the various boards of trade in the Dominion.

**BUSINESS-EFFICIENCY EXHIBITION.**

[From Consul General John L. Griffiths, London, England.]

The fifth British Business-Efficiency Exhibition has just been held in London. Among the exhibits were: Adding machines, card systems, check protectors, addressing machines, calculating machines, stamp affixers, typewriters and accessories, carbon papers, filing systems, duplicating machines, loose-leaf and perpetual ledger systems, billing machines, business phonographs, etc.

This exhibition differed in one important particular from many of the trade exhibitions recently held in London, i. e., the marked preponderance of American devices, systems, and office equipments shown. Probably more than one-half of the exhibits were of American manufacture, and the opinion was frequently expressed at the exhibition that the Americans were the pioneers of the improved methods by which the transaction of business is so greatly facilitated.

The introduction in recent years of improved methods for the transaction of business and the adoption of office equipment in the way of filing cabinets, etc., in which correspondence and documents can be placed so as to be readily accessible, have been effected to some extent through attractive advertising, but even to a greater extent through the efforts of traveling representatives and through the publicity gained at business-efficiency exhibitions.

**Noteworthy Displays.**

Among some of the more notable exhibits, other than American, at the recent exhibition were the following:

(a) *Stamp-affixing machine*.—This is a British invention and of British manufacture. A reel of stamps is placed in the stamp retainer, which is then locked. The machine is placed on the envelope or wrapper. By the single operation of pressing down the lever a stamp is detached, wetted, affixed, and registered. In appearance it is not unlike a numbering or "plunger" dating machine. It is stated that when once the stamps are locked into the machine any attempt at surreptitious abstraction mutilates the stamps, while the automatic registering of the stamps, the number used being always visible on the indicator, is another safeguard. From 4,000 to 5,000 stamps can be affixed per hour. According to information received, this machine is in use in many of the largest business houses, being employed in banks, by manufacturers, railroad companies, etc.

(b) *Loose-leaf ledgers*.—Manufactured by a British firm. It is stated that more than 100,000 are now in use.

(c) *Typewriters*, of British make: (1) With ordinary or foolscap-size carriage, taking paper 9½ inches wide and writing a line 8 inches long. The selling price of this model is £10 (\$48.66). For brief-size carriage, taking paper up to 14½ inches, and having a writing line of 13½ inches, the price is £13 10s. (\$65.70). The weight of this machine is stated to be for the smaller size, 14 pounds, with 84 to 96 characters, hardened steel type, shift keys, line feed, two-color vibrating ribbon, universal keyboard, and four releases. (2) A low-priced typewriter, selling ordinarily at £9 15s. (\$47.45), but during the exhibition at £8 8s. (\$40 87) is, it was stated, a very efficient machine.

(d) *Dispatch carriers*.—These are built on the tricycle system. A large metal box is fitted over the two front wheels, while the driving wheel and seat are at the rear. This invention for the speedy delivery

of goods has become very popular during the past few years, and has superseded the earlier handcar method. Prices range from £14 14s. to £18 18s. (\$71.54 to \$91.97).

(e) *Addressing machine*.—A new model with automatic envelope feed. This machine will address envelopes of various sizes, each with a different address and in facsimile typewriting, at a speed of 7,500 per hour. It is also adaptable for heading and dating statements, rate notices, dividend lists, analysis sheets, annual returns, renewal notices, and receipts.

(f) *Calculating machine*, of British make. This has only recently been placed on the market. Two machines were exhibited, each capable of simultaneous addition and subtraction. These machines are used for the calculation of gross, tare, and net weights. The quantities are expressed in tons, hundredweight, quarters, and pounds. The subtraction of the tare from the gross with the resultant net weight is automatically performed. The three sets of figures are printed side by side so that each weight can be totaled. Interlocking devices secure accuracy. It is stated that practically unlimited speed can be attained. The typing mechanism is at the back. The platen can be brought into sight by depressing a lever.

#### **Excellent American Opportunity.**

As there is a steady advance in the adoption of progressive American business methods and systems in the United Kingdom, an excellent opportunity is presented to the American manufacturers for the further introduction of new devices.

It is necessary in most instances, before a new business system can be installed, that its efficiency be demonstrated, as it would only occasionally be purchased as the result of reading an advertisement. It is, therefore desirable, if business on a large scale is contemplated in the United Kingdom, that the American manufacturer, after making a careful preliminary survey, should establish a central office and show rooms in London. Where such a course is not feasible, then it would be well to secure an agent in London, and preferably an agent who does not represent anyone else, so that he may give his whole time and effort to the promotion of the interests of the American manufacturer whom he represents. The London consulate general would be pleased upon application to do everything in its power to place manufacturers in touch with individuals or companies who would be desirous of accepting such agencies.

The British Business-Efficiency Exhibitions, with the exception of that in 1911, have been held for a series of years in London and similar exhibitions are given in the larger cities throughout the United Kingdom. Each of these exhibitions affords the American manufacturer an excellent opportunity of bringing his business devices and equipments to the direct notice of English business men.

---

#### **WEATHER VANE CATALOGUES WANTED.**

The Weather Bureau, Department of Agriculture, Washington, D. C., is desirous of securing for its library as complete a collection as possible of the illustrated catalogues of American firms manufacturing or dealing in ornamental wind vanes and weathercocks. Catalogues of scientific instrument makers are not desired in this connection as the bureau is already supplied with these.

**BIG RAILWAY EQUIPMENT ORDERS.**

[Canadian press reports from Ottawa.]

**Vast Expenditures in Canada.**

Reports made to the Board of Railway Commissioners of Canada by the Canadian Pacific, Grand Trunk, Canadian Northern, and Great Northern Railways of new equipment under construction disclose a huge equipment program. The figures given do not include equipment for which appropriations have been made but not ordered because of difficulty in finding manufacturers, Canadian or American, to undertake construction of new equipment in the near future. All the roads reporting state through their officials that they are in the market for much more equipment than that included in the figures here given, but that the Canadian shops are away behind in filling their orders, which far exceed their capacity, and that similar conditions obtain among the United States manufacturers.

**Manufacturers Can Not Fill the Orders.**

"We have appropriated \$19,000,000 for new equipment, but can not find manufacturers who will take our money," is the manner in which General Manager Leonard, of the Canadian Pacific Railway, puts it. The Canadian Pacific reports that it has the following under construction now, 11,593 box cars, of which 7,080 are being built at its own shops in Montreal, 2,000 at Hammond, Ind., 2,000 at Hegewisch, Ill., 513 at Detroit, and that all are to be delivered between now and October. It has under construction 665 stock cars, of which it is building 465 in Montreal, and 200 have been ordered from Halifax; 244 refrigerator cars, being built at Montreal; 411 coal cars at Montreal; 616 ballast cars at Montreal; 42 tank cars, being built at Detroit, and 158 caboose cars, being built at Montreal. It also has under construction 52 passenger locomotives, 120 freight locomotives, and 35 switch locomotives at Montreal.

The Grand Trunk reported that it has under construction 2,000 box cars by the Canada Car & Foundry Co. at Montreal; 250 refrigerator cars at Amherst, Nova Scotia; 1,000 box cars by Western Steel Car & Foundry Co. at Hegewisch, Ill.; 1,000 coal cars by the Pressed Steel Car Co. at McKees Rocks, Pa.; 250 automobile cars by the Western Steel Car & Foundry Co.; 250 automobile cars by the American Car & Foundry Co. at Detroit; and 250 refrigerator cars by the same company at its Chicago works, besides 10 passenger locomotives at its Montreal shops.

The Great Northern Railway Co. reports that it has under construction 25 locomotives at the Baldwin Locomotive Works, and 1,500 box, 250 refrigerator, and 1,000 ore cars under construction by the Haskell & Barker Car Co. The Canadian Northern reports it has under construction 1,911 box cars and 132 flat cars, and 61 locomotives are being built in Canadian shops. This road also reports a large number of new roundhouses and other improvements in the West now under construction.

Reports have not been received from the numerous smaller roads, but it is estimated that as much more equipment has been ordered by them. Most of this new equipment is intended for use in coping with the great freight congestion expected to reappear again after the harvesting of this year's crop in the West. Traffic experts, the members of the grain commission, and other Government officials see little hope of avoiding another great grain blockade this year. The National Transcontinental will not be connected up with the Grand Trunk Pacific this year, and in consequence there will be, as formerly, only the Canadian Pacific "spout" through which to empty the great granary of the West to the east of Fort William after the close of navigation.

**JAPANESE SHIPPING AND AUSTRALIAN TRADE.**

[From Consul General John P. Bray, Sydney.]

Recently shipments of merchandise from Sydney to San Francisco have been made in the steamers of the Nippon Yusen Kaisha via Yokohama, with transshipment at that port to trans-Pacific connecting Japanese vessels. This is a significant indication of the vigor with which the Japanese are pushing their merchant shipping enterprise in the Pacific. From inquiries made of the shippers directly concerned it has been learned that a saving in freight of approximately \$5 per ton has been effected by taking advantage of the Japanese service, although there are direct steamers leaving Sydney for San Francisco at stated intervals.

**GERMAN MUNICIPAL NOTES.**

[From Deputy Consul General Simon W. Hanauer, Frankfort on the Main.]

*A new bridge* over the River Main is to be built by the city of Frankfort at an estimated cost of over \$1,000,000.

*City employees.*—On the city's pay roll are 9,888 persons, including 3,104 officials and teachers, 6,594 employees and laborers, and 109 men of the fire department.

*School attendance.*—Frankfort has 92 public schools, where last year 54,300 children were instructed by 1,454 teachers. The private schools were attended by 3,801 scholars.

*Market hall.*—Frankfort is planning to erect a new market hall, to cost over \$700,000. A committee of councilmen is visiting other large cities to inspect similar halls of the best type.

*At the municipal slaughterhouse* in Frankfort 261,698 animals were killed last year, these including 1,381 horses, 26,666 sheep and goats, 126,567 swine; the balance consisted of calves, cows, and oxen.

*The police department* of Frankfort is a State institution under the control of the Prussian civil governor. It is composed of 105 bureau officials, clerks and messengers, 38 captains and officers, 66 detectives, and 638 sergeants and patrolmen.

*Statistics.*—The city waterworks last year supplied 24,000,000 cubic meters of water (a cubic meter is equal to 264.17 gallons). The city electrical works furnished 41,000,000 kilowatt-hours. The electric tramway lines, owned and operated by the city, carried 93,500,000 passengers.

*Consumers' Cooperative Society.*—The Frankfort Konsum-Verein (cooperative association) has been in existence 11 years. The following table comparing the association's transactions during its first and its most recent fiscal years will show the development of the organization:

Transactions and membership.	First year.	Last year.
Total sales of merchandise.....	\$50,336	\$1,603,132
Reserve fund.....	257	43,924
Savings fund.....	4,003	259,048
Written off for losses, etc.....	151	14,115
Number of members.....	2,046	20,449

The association employs 340 persons in its 52 stores or distributing places, bakery, coffee-roasting and mineral-water bottling establishments.

**Roumanian Locomotive Contracts.**

American Minister John B. Jackson reports from Bucharest that he understands that the contract to furnish the Roumanian Government with 20 express locomotives has been given to the Maffei Works at Munich, Germany, at a price of \$25,862 each, and that at least a part of the contract for the 32 freight locomotives (mentioned in Daily Consular and Trade Reports for May 21, 1912) is to go to the Grafenstaden Works at Strassburg, Germany. Austrian, Belgian, English, French, German, Hungarian, Italian, and Russian firms took part in the competition.

**URUGUAYAN COMMERCIAL NOTES.**

[From American Minister N. A. Grevstad, Montevideo.]

**Successful Year of Montevideo's Waterworks.**

The report for the fiscal year 1911 of the Montevideo Waterworks Co., submitted at the thirty-third annual meeting of the shareholders held in London March 21, shows the excellent condition of this company and presents a fine example of a well-managed English concern. The following data were taken from the published report:

A larger gain in the number of additional services was made in 1911 than in any previous year of the company's existence. At the close of 1907 the total number of services was 15,670, in 1908 it rose to 16,839, in 1909 to 18,841, in 1910 to 21,763, and in 1911 to 24,890.

The paid-up capital of the company now totals \$4,250,000, a \$500,000 increase thereto having been effected during the year through a new issue of shares, at a premium of \$125 per share. The premium has been added to the reserve fund, raising it from \$550,000 to \$675,000. An additional \$50,000 is to be apportioned to the reserve fund from the profit and loss account. There is, besides, a social reserve fund of \$125,000, which may be drawn upon for the equalization of dividends in case of need.

From the depreciation fund, which at the close of the preceding year stood at \$222,620, was written off the sum of \$27,220 in reduction of the book cost of meters and materials; but at the same time there is to be added \$50,000 out of the year's profits, so that the depreciation fund carried forward will show a net increase of some \$23,000.

Expenditures made on capital account in the course of the year reached \$340,560: Extension of the city mains, \$83,600; new filters, \$25,490; new engine, \$60,000; new buildings or additions, \$3,885; new gravitation main, \$167,585. All this expenditure was the direct outcome of the rapid development of the company's business.

Gross receipts in the fiscal year 1911 amounted to \$791,625, being an increase of 4.33 per cent over the preceding year, while expenses, on the other hand, totaled \$264,806, or an advance of 12 per cent. The income was adversely affected by the prevalence of rain (and the consequent copious supply of water in private cisterns) and by the lower rates for the municipal service.

After bringing in the balance from the preceding year, \$186,135, and after payment of debenture interest and the interim dividend of 3 per cent, there is a balance available of \$501,385, which it was recommended be appropriated as follows: In payment of a final dividend of 5 per cent (making a total dividend for the year of 8 per cent, at which rate it has been maintained for the last three years), free of income tax, \$187,500; to depreciation fund, \$50,000; to reserve fund, \$50,000; balance to be carried forward, \$213,885.

[From Consul Frederic W. Goding, Montevideo.]

**Exports of Hides and Skins.**

During 1911 there were shipped from Uruguay to foreign countries 839,729 cattle hides and 253,959 calfskins. The approximate weight of these was 20,042,528 pounds and the value about \$4,427,395. The destinations of the shipments show the United States to be the chief purchaser, with more than 30 per cent of the total export of both articles, Spain, Italy, and Austria following. Portugal, however, was the leading market for the calfskins.

**New Sugar Refinery.**

In this Republic there are two sugar refineries in operation, one of which imports crude sugar, the other obtaining its supply from beets grown in the vicinity. A project for a third, which has been introduced by the Executive for consideration by the Chamber of Representatives, grants to Diaz Aznares & Co. the right to expropriate about 25,000 acres of land for a factory with a capacity of 660 tons per day and for planting beets, the capital of the company to be

\$827,200. The work must be completed within two years after the date of the concession. The enterprise is to be free from taxation for 10 years.

#### Wool Shipments.

From October 1, 1910, to September 30, 1911, Uruguay's shipments of bales of wool were as follows:

Year.	United States.	Austria.	England.	France.	Germany.	Netherlands.	Italy.	Total.
1911.....	718	2,853	4,975	38,492	38,807	21,711	3,994	111,590
1910.....	7,821	1,364	2,843	44,009	17,078	23,705	4,302	101,122

At an average price of \$342 per bale the value of the 1911 wool exports reached the sum of \$38,150,100. [The wool clip of Uruguay was reviewed in Daily Consular and Trade Reports on May 6, 1912.]

### TRINIDAD NOTES.

[From Consul Franklin D. Hale, Port of Spain, June 10.]

*Relief from drought.*—The force of the most serious drought known in Trinidad for 50 years has been broken by copious showers in nearly all sections of the island. The water supply for daily use is now ample, but a very great rainfall is necessary soon to insure satisfactory crop conditions for next year. The prospect for newly planted cane is not good and the supply of seedlings is not equal to the demand.

*Cocoa shortage.*—Very little cocoa remains in store after recent shipments, and because of the long-continued drought there will be little more to export before very late in the year. The usual June pickings will amount to almost nothing, and the quantity of the crop to be gathered later will depend largely upon the rain conditions, although thousands of trees have been partially or entirely destroyed by fire.

*Hotel improvements.*—The unusually large tourist business during the past season has proved so profitable as to lead to greater expectations in the future, and the managers of Queens Park Hotel, in Port of Spain, are planning extensive improvements—increasing the number of rooms, building suites, and enlarging the dining rooms to accommodate 350 guests. The furniture for the suites will be imported from New York.

*Venezuelan cattle for Trinidad.*—Trinidad finds its principal supply of fresh beef in the Venezuelan cattle imported from the Orinoco districts about Bolivar. The unusual dry season that has prevailed all over this part of the world for months has been disastrous to the raising of cattle, which have in great numbers died for lack of water and grass on the inland plains. For some weeks the supply for the Trinidad market has been small, and consequently the price of beef has been almost prohibitively high. To remedy the serious condition the Compañía de Navegación Fluvial y Costanero de Venezuela is putting into service a special line of steamers from Bolivar up the Orinoco to San Fernando de Apure, to bring cattle from the more inland districts where the drought has not been so great.

**FOREIGN PAPERS FOR ADVERTISING AMERICAN GOODS.**

No attempt has been made in the series of reports entitled "Foreign papers for advertising American goods" to publish complete schedules of advertising rates, which, for most papers, vary according to the amount of space, length of contract, and position. One rate is quoted to give advertisers a general idea of the cost of advertising. Unless otherwise stated, the rates in the following reports are given in United States currency:

**MEXICO.****ACAPULCO.**

[By Consul Clement S. Edwards.]

There are no news or trade papers published in the State of Guerrero, the only publication being the *Periodico Oficial*, a small quarto published weekly at Chilpancingo, the capital, and containing only laws, decrees, and court judgments. *El Heraldo* (Spanish and English), *El Imparcial* (Spanish), and *El Diario* (Spanish), published in Mexico City (see report for the consular district of Mexico), are in general circulation in this region and are the best mediums for advertising purposes. *El Heraldo* appears to be the most popular, having the widest circulation here. All of these papers are devoted to news and advertising and bear evidence of considerable enterprise.

Citrate of lime, coffee, fruits, hides and skins, oil cake and meal, and rubber are exported from this district to the United States. Machinery, mineral and vegetable substances, arms and explosives, and chemicals are imported therefrom.

**AGUASCALIENTES.**

[By Vice Consul H. G. Bretherton.]

The imports of agricultural implements from the United States to this district are increasing. Other imports from the United States include shoes, pumps and windmills, pipes, building supplies, furniture, electric supplies, cooking utensils, and groceries. The principal exports to the United States are copper, lead, and silver bullion, beans, hides and skins, household effects, and drawn work. Following are the leading papers:

*Revista del Centro* (Spanish), Aguascalientes. Weekly newspaper. Advertising rates, 15 cents per inch per insertion. Annual subscription price, 80 cents. Circulation, 1,800.

*El Debate* (Spanish), Aguascalientes. Weekly newspaper. Advertising rate, 15 cents per inch per insertion. Annual subscription price, 80 cents. Circulation, 1,500.

*El Clarin* (Spanish), Aguascalientes. Weekly newspaper. Advertising rate, 7 cents per inch per insertion. Annual subscription price, 80 cents. Circulation, 500.

*El Diario* (Spanish), Zacatecas. Daily newspaper. Annual subscription price, \$6.

**CHIHUAHUA.**

[By Consul Marion Letcher.]

American machinery, hardware, furniture, shoes, hats, and clothing are sold in the district. The principal exports to the United States are silver, gold, and lead bullion; gold, silver, lead, and zinc concentrates; lumber, hides, cattle, and ores. The two leading papers are reported below:

*Enterprise* (English), Chihuahua. Weekly newspaper. Advertising rate, 30 cents per inch per insertion. Annual subscription price, \$2. Circulation, 1,000.

**El Monitor** (Spanish). Chihuahua: Daily newspaper. Advertising rates, 75 cents per inch per month. Annual subscription price, \$3. Circulation, 4,000, throughout Chihuahua and adjoining States. Has under consideration the printing of an English section, which would result in doubling the present size of the paper. Correspondence may be conducted in English.

#### CIUDAD JUAREZ.

[By Consul Thomas D. Edwards.]

The total value of imports from the United States at the port of Ciudad Juarez during 1910 was \$8,210,208, an increase of \$2,377,928 compared with 1909. The principal exports to the United States are bullion, hides and skins, live stock, and ores. There are only two small publications issued in the district.

**El Progreso** (English). Colonia Dublan. Weekly newspaper. Advertising rates are reasonable. Annual subscription price, \$1.50. Circulation, 800, principally among the farmers and stock raisers.

**Revista Internacional** (Spanish). Ciudad Juarez. Weekly newspaper. Advertising rates are reasonable. Annual subscription price, \$1.50. Circulation, 600, among officials and business men.

#### CIUDAD PORFIRIO DIAZ.

[By Consul Luther T. Ellsworth.]

Merchandise to the value of \$4,910,079 was furnished this consular district during 1910 by the United States, consisting principally of agricultural implements, corn, carriages, railway cars and coaches, drugs and chemicals, explosives, fruits, hats, iron and steel, boots and shoes, metal goods, oils, provisions, seeds and grains, and lumber. The exports are animals, calamine, coffee, hides and skins, ixtle, pecan nuts, and rubber. The two leading papers are reported below:

**El Pueblo Libre** (Spanish). Ciudad Porfirio Diaz. Weekly newspaper representing all lines of trades. Advertising rate, \$2 per column (column 13 inches). Annual subscription price, \$1. Circulation, about 800.

**El Internacional** (Spanish). Ciudad Porfirio Diaz. Weekly newspaper representing all lines of trades. Advertising rates, \$2.50 per column (column 18 inches). Annual subscription price, \$2. Circulation, about 1,000.

#### DURANGO.

[By Consul Charles M. Freeman.]

Mining and agriculture are the principal industries of this district. There are also rubber, cotton, wool, and soap factories, iron and steel works, and ore smelters. No trade journals are published. There are several weekly and triweekly newspapers printed, but it is believed that no paper issued in this district could be used advantageously for advertising the various products of the United States unless the products were on sale by some local firm. Exporters of American-made goods, unless, as stated above, the goods are already on sale locally, desiring to advertise in Mexico would undoubtedly obtain better results by using papers published in Mexico City, as they cover the ground more thoroughly and are read by the people who would be interested in the purchase of American goods. Two of the local papers are reported below:

**El Heraldo** (Spanish). Durango. Newspaper issued four times a week. Advertising rate, 50 cents per inch per month, a reduction being made for larger space or longer time. Annual subscription price, \$4.50. Circulation, about 3,000.

**La Evolucion** (Spanish). Durango. Newspaper issued four times a week. Advertising rate, 50 cents per inch per month, a reduction being made for larger space or longer time. Annual subscription price, \$4.50. Circulation, about 3,000.

**FRONTERA.**

[By Consul A. J. Lespinasse.]

Agricultural implements, boots and shoes, drugs and chemicals, iron and steel manufactures, lumber, and provisions are imported from the United States, and bananas, coffee, hides, and skins, rubber, and woods, are exported thereto. The leading papers published in the district are given below:

**El Correo de Tabasco** (Spanish), San Juan Bautista. Daily newspaper of two sheets, one sheet devoted to general and local news and the other to advertisements. Advertising rate, \$3.75 per one-eighth page per month. (type page 13 by 18 inches). Annual subscription price, \$6. Circulation, 1,500, reaching business houses, planters, and all classes generally.

**El Progreso** (Spanish), San Juan Bautista. Weekly bulletin issued by the National Board of Agriculture of Tabasco, devoted to the agricultural interests of the State. Advertising rate, \$1.50 per one-eighth page per month (type page 7 by 10½ inches). Annual subscription price, \$3. Circulation 700, reaching planters, farmers, and business firms.

**GUADALAJARA.**

[By Consul Samuel E. Magill.]

No trade papers are published in the district. The leading newspapers are given below. It would be advisable for American business men to make arrangements for advertising through some agency or local firm which could attend to the details. The clerk of the consulate, Mr. Raymond A. Merrill, will gladly arrange contracts for American advertisers without charge.

**La Gaceta** (Spanish), Guadalajara. Daily and weekly newspaper. Advertising rates, daily, 35 cents per inch per insertion, second and third pages; weekly, 50 cents per inch per insertion. Annual subscription price, daily, \$3; weekly, \$2. Circulation daily, 15,000; weekly, 18,000.

**El Regional** (Spanish), Guadalajara. Daily newspaper. Advertising rate, 25 cents per inch per insertion. Annual subscription price, \$3.60. Circulation, 6,000.

**Guadalajara Times** (English), Guadalajara. Weekly newspaper, circulating principally among Americans and containing many advertisements. Advertising rate, 50 cents per inch per insertion. Annual subscription price, \$1. Circulation, 1,200.

**HERMOSILLO.**

[By Consul Louis Hostettler.]

The total value of imports into Hermosillo during 1910 was \$2,752,678, of which the United States furnished \$1,014,389, consisting principally of agricultural implements, cotton goods, furniture, groceries, hardware, clothing, and boots and shoes. Gold and silver bullion, chick-peas, dried peas, and hides and skins are the leading exports to the United States. No trade papers are published in the district.

**El Correo de Sonora** (Spanish), Guaymas. Daily newspaper. Advertising rates, about \$21.50 per inch per year, daily insertions. Annual subscription price, \$6. Circulation, 800.

**La Era Nueva** (Spanish), Hermosillo. Weekly newspaper. Advertising rates, about \$13.90 per inch per year, weekly insertions. Annual subscription price, \$3. Circulation, 1,200.

**MATAMOROS.**

[By Consul Jesse H. Johnson.]

The import and export trade of the consular district of Matamoros materially increased during 1910 compared with previous years. Practically all the exports from the district went to the United States, and of the total imports, valued at \$169,069, the United

States furnished \$161,500 worth. Two newspapers are published in the district, representing the various lines of trade.

**El Sol de Mayo** (Spanish), Matamoros. Issued three times a week. Advertising rates, \$1.50 per insertion for a space 5 inches square. Annual subscription price, \$2.50. Circulation, about 600.

**El Matamorense** (Spanish), Matamoros. Weekly. Advertising rates, \$1.50 per insertion for a space 5 inches square. Annual subscription price, \$1.25. Circulation, about 500.

#### MAZATLAN.

[By Consul William E. Alger.]

Of the total value of imports into the port of Mazatlan during 1910, amounting to \$1,651,143, the United States furnished goods valued at \$786,714, consisting principally of animal, mineral, and vegetable products, textiles, machinery, and explosives. The value of articles invoiced through the American consulate at Mazatlan for the United States during 1910 was \$3,744,398, a gain of \$226,113 compared with the previous year; bullion, concentrates, ores, hides, rubber, and provisions being the principal exports. There is but one paper published in the district, and that reaches the whole reading public.

**El Correo de la Tarde** (Spanish), Mazatlan. Daily newspaper. Foreign annual subscription price, \$7.50. Circulation, 7,500, and is rapidly increasing.

#### MEXICO CITY.

[By Consul General Arnold Shanklin.]

Mexico City is the richest commercial center in the country, and the manufacturing industries are extensive, among the more important being distilleries, breweries, foundries, paper mills, textile works, and tobacco factories.

There are about 50 papers and magazines, severally devoted to news, trade, society, science, education, politics, humor, etc., published in the Federal District of Mexico, but by far the greater majority of them are unimportant, and have a very limited circulation. In fact there are very few papers published here which it is believed would be of any value to American manufacturers for use as advertising mediums. Those which could be used advantageously are treated below:

**Mexican Herald** (English), Mexico City. Daily morning newspaper (only English newspaper in Mexico City), modeled on the lines of the United States papers, carrying Associated Press news, and circulating generally among the English-speaking population of the city and vicinity. Contains considerable advertising, chiefly in the machinery and dry goods lines. Advertising rates, 3 cents per agate line per insertion. Annual subscription price, \$7. Circulation, 10,000.

**El Imparcial** (Spanish), Mexico City. Daily morning newspaper of general circulation throughout the Republic, carrying Associated Press dispatches as well as maintaining its own news service in Mexico. Advertising rates, \$1.40 per inch per insertion. Annual subscription price, \$6. Circulation, 90,000, divided about equally between Mexico City and the remainder of the Republic.

**El Diario** (Spanish), Mexico City. Daily morning newspaper, maintaining its own correspondents in the principal cities of North and South America and Europe. Advertising rates, 84 cents per inch per insertion. Annual subscription price, \$6. Circulation, 48,000, 30 per cent distributed in Mexico City.

**El Heraldico Mexicano** (Spanish), Mexico City. Daily newspaper, same publishers as Mexican Herald. Advertising rates, 3 cents per agate line per insertion. Annual subscription price, \$3. Circulation, 30,000, about 50 per cent distributed outside the City of Mexico.

**Mexican Financier** (English), Mexico City. Weekly financial journal, devoted to the commercial and banking interests of Mexico, and is read generally by the banking, mining, and general financial interests of the country. Advertising rates, \$5 per inch per insertion. Annual subscription price, \$5. Circulation, 3,000.

**Mexico Mining Journal** (English and Spanish), Mexico City. Monthly journal dealing with mining in its various phases and circulates largely among the mining

interests in Mexico. Advertising rates, \$2.50 per inch per insertion. Annual subscription price, \$1.50. Circulation, 5,000.

**El Hacendado Mexicano** (Spanish), Mexico City. Monthly journal, devoted to agriculture and sugar manufacture in Mexico. Advertising rates, \$32.50 per page for three months (type page 8 by 11 inches). Annual subscription price, \$4. Circulation, 1,800, 1,000 in Mexico and the balance in Central and South America and the West Indies.

#### MONTEREY.

[By Deputy Consul John C. Allen.]

The leading exports from this district to the United States are argentiferous lead, lead and silver bars, calamine, goatskins, guayule rubber, hair, hides, and pecan nuts. There are no trade papers or magazines published in this consular district. The leading newspapers are reported below:

**Monterey News** (English and Spanish editions), Monterey. Daily newspaper. Advertising rates, 25 cents per inch per insertion for 500 inches or more display space to be used within one year. Combined rates for both editions, about 10 per cent discount. Annual subscription price, each edition, \$5. Circulation, Spanish edition, 6,500; English edition, 3,500.

**El Noticiero** (Spanish), Monterey. Daily newspaper. Advertising rates, \$10 per page per insertion (type page 10½ by 14 inches). Annual subscription price, \$3. Circulation, 4,500.

**La Prensa** (Spanish), Monterey. Daily newspaper. Advertising rates, \$2.50 per inch per month, second or third page. Annual subscription price, \$5. Circulation, 6,000.

**El Trueno** (Spanish), Monterey. Weekly newspaper. Advertising rates, 25 cents per inch per insertion. Annual subscription price, \$1. Circulation, 3,640.

**Telephone Directory** (Spanish), Monterey. Issued four times a year. Monterey and Saltillo editions. Advertising rates, Monterey edition, \$10 per page per insertion (type page 5 by 8 inches); Saltillo edition, \$5 per page per insertion (type page 4½ by 7½ inches); space in both editions, 8 per cent discount. Annual subscription price, \$1. Circulation, Monterey edition, 1,549; Saltillo edition, 639.

#### NOGALES.

[By Consul Alexander V. Dye.]

Mining is the principal industry of the consular district of Nogales, especially copper mining. There are three important frontier ports, namely, Nogales, Naco, and Agua Prieta. The principal imports from the United States are mining machinery, crude oil, dynamite, lard compound, and bituminous coal, and the exports consist of bullion, concentrates and ores, cattle, and hides. Below are given the leading papers published in the district:

**Sonora News** (English), Cananea. Weekly newspaper. Advertising rates, 25 cents per inch per insertion. Annual subscription price, \$3.75. Circulation, 950, principally among American business and mining men.

**La Verdad** (Spanish), Cananea. Daily newspaper. Advertising rates, \$1 per inch per insertion, second page. Annual subscription price, \$4. Circulation, 1,500, principally among the Mexican laboring classes of Cananea.

#### PROGRESO.

[By Consul G. B. McGoogan.]

The principal crop of the State of Yucatan, which includes the consular district of Progreso, is sisal fiber. The leading exports from this district are sisal, chicle, hides and skins, and mahogany. The papers named in the list below are the best advertising mediums in the district:

**La Revista de Merida** (Spanish), Merida. Daily newspaper. Advertising rates, 15 cents per inch per insertion. Annual subscription price, \$6. Circulation, 6,000.

**Diario Yucateco** (Spanish), Merida. Daily newspaper. Advertising rates, 13 cents per inch per insertion. Annual subscription price, \$6. Circulation, 6,000.

**SAN LUIS POTOSI.**

[By Consul Wilbert L. Bonney.]

The population of the State of San Luis Potosi in 1910 was officially reported as 624,748, compared with 575,432 in 1900. The capital is the largest city in the State, and has a population of 82,946, according to the recent census. The principal imports throughout the district are machinery, vehicles, hardware, arms, cotton, silk, woolen goods, gold work, furniture, chemicals, paper, glassware, jewelry, shoes and haberdashery, groceries and food stuffs, electrical and optical goods. The value of the articles invoiced through the American consulate at San Luis Potosi to the United States during 1910 was \$4,395,383, an increase of \$987,430 compared with 1909, and consisted principally of beans, bullion, ores, chili, ixtle fiber, hides and skins, pecan nuts, and rubber.

There are no trade papers published in this consular district. The only newspaper of commercial importance is *El Estandarte*. The circulation of this paper is almost entirely local, and it reaches the majority of the reading people of this capital. There are two country papers in outside towns, but their circulation is small, and they are not commercially important. In addition, there are about 3,500 copies of Mexico City papers, mostly in Spanish, sold at the station and on the streets each morning, and this trade is increasing. The most popular Mexico City papers are *El Pais*, *El Imparcial*, *El Heraldo*, and the Mexican Herald.

Many small papers have recently sprung up in San Luis Potosi, which are yet of little importance. One or more of them may prove permanent, as there is room for another local paper. The habit of reading newspapers is growing rapidly, and the study of the English language is daily becoming more popular, two facts which have a bearing upon advertising.

**Methods Employed—Absence of Street Signs.**

In the absence of any general medium the question of how to reach the consumer by advertising is a puzzling one, and at the same time it is one of the most important that could be raised, and is worthy of the study of expert advertising men. The patent-medicine manufacturers have solved it to an extent adequate for their purposes, and their views on the subject would be most valuable. They use all means—newspapers, posters, circulars, and samples—and some of their goods are almost as well known here as at home.

Street signs in this district are usually painted on the business houses, and as the streets generally are narrow these signs are difficult to read in passing, and at night they are entirely useless. An overhanging electric sign placed by an American sign company has added to the appearance of the principal street, and created favorable comment. Some large concerns of this city bear no sign or advertising matter to indicate their name or the character of business engaged in, and as the goods can not be well displayed, it is often a matter of some difficulty to determine the line of goods kept in such stores. There are other concerns which use modern methods, excepting that they hesitate to publish their prices. Those engaged in the jobbing trade do not use newspaper advertising, but they have special knowledge of their field and can circularize effectively. Their failure to use

the local paper is not conclusive against its value for advertising foreign goods.

One newspaper with a circulation of 3,000 in a city of 83,000 indicates the advertising situation here. There is little local advertising in this paper. Local merchants have not learned its importance, and competition is not of the open and aggressive kind which prevails in the United States.

#### **Goods Which Could Well Be Advertised.**

With but one local paper the problem for the advertiser is simplified. This paper is read by nearly all native people of the middle and upper classes, and it is bound to grow in importance with increasing freedom of discussion and interest in public matters. An advertisement in this paper could hardly escape attention; it need not be large. Newspaper advertising is still somewhat of a novelty. The editors do not subordinate reading matter to their advertising. I am convinced that a card in the local paper would result in more inquiries than the same amount of money spent in circulars and posters, if the article advertised is of general appeal. Local advertising is especially good for single standardized articles, which do not require extended negotiations in the buying, such, for example, as tools, hand presses, kitchen devices, shoes, and novelties. A cut should show the article, if practicable, with price. Circulars and catalogues are plentiful here, but when an article is advertised in the local paper it has a guaranty which circulars and catalogues do not carry, and familiarity with an advertisement is in a measure like acquaintance with the goods.

If the market here at first is limited, on the other hand, advertising is not expensive. The first inquiries would naturally be from those who have an actual need of the article advertised. But with one order a sample is furnished to a small circle, knowledge of the goods spreads, and later orders will come from those whose needs have been created by the advertisement, and, finally, the article comes to be a necessity in the trade. So many of the middle class are learning English that the method of printing an advertisement in both languages might be tried. Real ingenuity will be appreciated if it keeps within the bounds of good taste. A striking advertisement here would attract more attention than in American cities.

The concession for placing advertising in more than 900 railway stations in Mexico is held by the General Advertising Co. of Mexico (Ltd.), Apdo. Postal 72, Mexico City.

**El Estandarte** (Spanish), San Luis Potosi. Daily, except Sunday. Advertising rates furnished on application. Annual subscription price, \$9. Circulation, about 3,000.

#### **TAMPICO.**

[By Consul Clarence A. Miller.]

The port of Tampico, which is said to be superior to all others on the Gulf coast, has excellent steamship service with ports of the United States, the total number of vessels entering Tampico engaged in international commerce during the fiscal year ended June 30, 1910, being 396; 173 vessels left United States' ports for Tampico during the fiscal year ended June 30, 1911. The value of articles exported from this consular district to the United States during the calendar year 1910, according to consular invoices, was \$829,725, against \$335,644 in 1909, consisting principally of calamine, chicle,

ixtle fiber, hides and skins, rubber, and sarsaparilla. The leading papers published in the district are listed below:

**Tampico Record** (English), Tampico. Weekly newspaper. Advertising rates, 13 cents per inch per insertion. Annual subscription price, \$1. Circulation, 500 to 1,000.

**Tampico Times** (English), Tampico. Weekly newspaper. Advertising rates, 13 cents per inch per insertion. Annual subscription price, \$1. Circulation, 500 to 1,000.

#### TAPACHULA.

[By Consul Albert W. Brickwood, Jr.]

According to the census for 1910, the State of Chiapas has a population of 436,817. The present is an opportune time for American exporters to place their wares in Chiapas. The first-class goods sold elsewhere can be sold here. Household furniture and draperies, rugs, wool, paper, ranges, hardware, refrigerators, crockery, cutlery, telephones and electric appliances, electric signs, hand fire extinguishers, toilet articles, dry and fancy goods, agricultural implements, durable long knives, or machetes, would find a good market. There is also an opportunity to sell vehicles, harness and saddlery, asbestos roofing, paints, cement, iron balconies, dairy appliances, drugs, and vegetable and flower seeds. The principal exports are coffee and rubber. No trade papers are published in the district; and the leading newspapers are reported below. The advertising rates of all these papers are reasonable, but their circulation is not very large. Some of the hardware stores and business houses advertise in these publications.

**El Sur de Mexico** (Spanish), Tapachula. Weekly newspaper. Annual subscription price, \$3.

**El Progreso** (Spanish), Tapachula. Weekly newspaper. Annual subscription price, \$3.

**El Herald de Chiapas** (Spanish), Tuxtla Gutierrez. Weekly newspaper. Annual subscription price, \$1.75.

#### VERACRUZ.

[By Consul William W. Canada.]

Veracruz is the largest city in the consular district of Veracruz, but Orizaba, Jalapa, Cordoba, Huatusco, Coatepec, Tuxpam, Papantla, and San Andres Tuxtla are also towns of some importance. The value of imports from the United States through the port of Veracruz during 1910 was \$9,608,420, and the value of exports thereto was \$4,484,684. Two newspapers are published in the district, but for the purposes of advertising the various lines of American products, with a view to bringing these goods to the attention of possible buyers, they are deemed of little importance. All first-class daily and weekly papers issued in Mexico City circulate here, the morning papers arriving in Veracruz on the evening of the same day. No trade journals are published in the district.

**La Opinion** (Spanish), Veracruz. Daily newspaper. Advertising rates, about 13 cents per inch per insertion. Annual subscription price, \$6. Circulation, 10,000.

**El Dictamen** (Spanish), Veracruz. Daily newspaper. Advertising rates, 13 cents per inch per insertion. Annual subscription price, \$6. Circulation, about 5,000.

#### BRITISH HONDURAS.

[By Consul William L. Avery, Belize.]

The consular district of Belize comprises the entire colony of British Honduras. Bananas, chicle gum, coconuts, rubber, and wood are the principal exports to the United States, and flour, provisions,

iron and steel manufactures, boots and shoes, clothing, oils, and drugs and chemicals are imported therefrom. There are only three papers published in the colony, one of which is the official journal of the Government, issued weekly, and containing only legal and official notices.

**Clarion** (English), Belize. Weekly newspaper established 1897. Best advertising medium in British Honduras. This paper has a 7 by 10 inch type page and each number contains 36 pages. Advertising rates, 10 cents per inch per insertion. Annual subscription price, \$4. Circulation, domestic, 500; foreign, 200.

**Colonial Guardian** (English), Belize. Weekly newspaper established 1882. Patent medicines and local enterprises are its principal advertisements. Advertising rates, 10 cents per inch per insertion. Annual subscription price, \$4. Circulation, domestic, 190; foreign, 60.

## COSTA RICA.

### PORT LIMON.

[By Consul Chester Donaldson.]

The exports from this district to the United States consist principally of bananas, gold and silver bullion, cocoa, coffee, hides, and rubber. Cotton goods, gold currency, flour, railway materials, machinery, coal, electrical supplies, drugs, lard, lumber, and leather are imported from the United States. The following are the leading papers published in this district:

**El Tiempo** (English and Spanish), Port Limon. Daily newspaper. Advertising rates, 10 cents per inch per insertion. Annual subscription price, \$4.65. Circulation, 4,000.

**El Heraldo de Atlantico** (Spanish), Port Limon. Weekly newspaper. Advertising rates, 8 cents per inch per month. Annual subscription price, \$2.33. Circulation, about 2,000.

### SAN JOSE.

[By Consul Samuel T. Lee.]

Bananas, coffee, gold and silver bullion, hides, rubber, cocoa, and timber are exported to the United States. Cotton goods, flour, iron and steel manufactures, railroad material, lard, lumber, coal, drugs, leather, and canned goods are imported therefrom. There are no trade papers published in the district. The leading newspapers are reported below:

**La Información** (Spanish), San Jose. Daily newspaper, reaching all classes of readers throughout the Republic. Advertising rates, 25 cents per inch per insertion. Annual subscription price, \$5.58. Circulation, 6,000.

**El Noticiero** (Spanish), San Jose. Daily newspaper, reaching all classes of readers throughout the Republic. Advertising rates, 4 cents per inch per insertion first page. Annual subscription price, \$4.65. Circulation, 3,500.

The following paper is added by the Bureau of Manufactures:

**Revista Economica** (Spanish, English, French, and German), San Jose. Monthly bulletin of finance, political economy, commerce, agriculture, industry, mining, customs duties, and statistics. Annual subscription price, \$2.50.

## HONDURAS.

### TEGUCIGALPA.

[By Consul Allen Gard.]

Honduras is the most sparsely settled country in Central America. Agriculture and grazing are the leading industries and bananas the principal product. The forests abound in valuable woods, medicinal herbs, gums, and fiber plants. It is one of the richest countries in Central America in mineral resources, but on account of lack of

transportation these are not fully developed. Exports consist chiefly of bananas, silver bullion, minerals, and ores, the greater portion of which are sent to the United States. The United States furnishes the bulk of the imports.

No trade papers are published in the consular district of Ceiba, and only two newspapers. One of these, *La Semana*, was only established a short time ago, and data concerning it are not available.

**El Comercio** (Spanish), Ceiba. Small newspaper, published Sundays and Thursdays. Advertising rates, 5 cents per inch per insertion. Annual subscription price, \$4.80. Circulation, about 500.

#### PUERTO CORTES.

[By Consul Claude I. Dawson.]

No trade journals are published in this district. Two newspapers are published and serve as advertising mediums for local industries, merchants, and professional men. The publication of these papers is liable to be suspended from time to time without notice.

**El Progreso** (Spanish), San Pedro Sula. Weekly newspaper. Advertising rates, \$48 per column (column, 15 inches) per year. Annual subscription price, \$2.40. Circulation (estimated), 2,000.

**El Centro-Americano** (Spanish), San Pedro Sula. Weekly newspaper. Advertising rates, \$48 per column (column, 2½ by 18 inches) per year. Annual subscription price, \$2.40. Circulation (estimated), 2,000.

#### TEGUCIGALPA.

[By Consul A. T. Haebert.]

This district has only one newspaper and no trade journals of any kind.

**El Nuevo Tiempo** (Spanish), Tegucigalpa. Four-page daily, containing telegraphic news from the various departments of the Republic, and publishing cables received from other countries; approximately 1½ pages devoted to advertising. Advertising rates, 8 cents per inch per insertion. Annual subscription price, \$4. Circulation, about 3,000.

#### NICARAGUA.

##### CORINTO.

[By Consul James W. Johnson.]

No trade papers are published in this district. The principal newspapers are reported below. It has been impossible to obtain schedules of rates for advertising. It appears that there are no fixed rates for this service, but that charges depend on the character of the advertisement and the individual or concern by which it is inserted.

**El Comercio** (Spanish), Managua. Daily newspaper, reaching merchants and better class of citizens throughout western Nicaragua. Annual subscription price, \$3.43. Circulation, 2,500 to 3,000.

**La Tarde** (Spanish), Managua. Daily newspaper, reaching merchants and better class of citizens. Annual subscription price, \$3.43. Circulation, 1,000 to 1,500.

**Diario de Nicaragua** (Spanish), Managua. Daily newspaper, reaching merchants and better class of citizens. Annual subscription price, \$3.43. Circulation, 1,000 to 1,500.

**El Independiente** (Spanish), Leon. Daily newspaper, reaching merchants and better class of citizens. Annual subscription price, \$1.72. Circulation, 500 to 1,000.

**El Diario Nicaraguense** (Spanish), Granada. Daily newspaper, reaching merchants and better class of citizens. Annual subscription price, \$2.58. Circulation, 1,000 to 1,500.

**BLUEFIELDS.**

[By Consul Arthur J. Clare.]

Nicaragua has a frontage on both the Atlantic and Pacific Oceans, but lack of facilities for communication in the interior has hampered the development of agricultural, forest, and mineral resources. Coffee and bananas are the principal products. About half of the export and import trade is carried on with the United States. No trade journals are published in the consular district of Bluefields. The following are the principal newspapers:

**The American** (English), Bluefields. Weekly newspaper. Best advertising medium for the district, reaching the principal firms and mining interests. Advertising rates, \$1 per inch per month. Annual subscription price, \$4.80. Circulation, about 500.

**El Heraldo** (Spanish), Bluefields. Weekly newspaper. Advertising rates, about \$1 per inch monthly; special rates furnished. Annual subscription price, \$6. Circulation, about 300.

**PANAMA.****COLON.**

[By Consul James C. Kellogg.]

Panama has practically no manufactures. The principal exports are bananas, coconuts, hides and skins, ivory nuts, rubber, and hardwood, of which the United States receives the greater portion. More than half of the imports are furnished by the United States and consist chiefly of foodstuffs, textiles, and hardware.

No trade papers are published in the consular district of Colon, and the leading newspapers are reported below:

**Independent** (English), Colon. Triweekly newspaper. Advertising rates, 8 cents per inch per insertion. Annual subscription price, \$5. Circulation, about 1,500.

**Colon Starlet** (English), Colon. Triweekly newspaper. Advertising rates, 10 cents per inch per insertion. Annual subscription price, \$5. Circulation, about 1,500.

**PANAMA.**

[By Consul General Alban G. Snyder.]

There are no strictly trade papers published in this district and only the more important newspapers are given in this report, as they are the only publications that would prove advantageous to business men in advertising their products. It is not believed that extensive advertising in any of these papers would prove of marked advantage to American interests not represented on the ground. Their circulation is confined almost entirely to the cities of Panama and Colon and intervening Canal Zone towns. Most of the advertisements are of local enterprises or of foreign goods represented by local agents, and as a general rule advertising here does not attract the attention or produce the results that business men in the United States are accustomed to.

**Diario de Panama** (Spanish), Panama. Daily newspaper, reaching all classes and accepting all kinds of advertising. Advertising rates, 10 cents per inch per insertion. Annual subscription price, \$12. Circulation, 7,000 to 8,000.

**Panama Journal** (English), Panama. Daily newspaper recently started. Annual subscription price, \$9.

**Panama Star and Herald** (English and Spanish), Panama. Daily newspaper, reaching all classes and accepting all kinds of advertising. Advertising rates furnished upon application. Annual subscription price, \$12. Circulation, estimated, 10,500.

**SALVADOR.**

[By Vice Consul General Harold D. Clum, San Salvador.]

Agriculture is the leading industry of Salvador, and the chief product is coffee. The country is rich in minerals; gold, silver, copper, and iron being worked to a considerable extent in parts where there are transportation facilities. The United States takes about one-third of the exports, consisting chiefly of coffee, precious metals, indigo, and sugar. The imports are cotton, drugs, food-stuffs, and manufactures of iron and steel. No trade journals are published in this district.

**Diario del Salvador** (Spanish), San Salvador. Daily newspaper, reaching all parts of the Republic. Advertising rates, 60 cents per inch per insertion, first page; 20 cents, second and third pages; and 30 cents fourth page. Foreign annual subscription price, \$10. Circulation, 8,000.

**Diario Latino** (Spanish), San Salvador. Daily newspaper, reaching all parts of the Republic. Advertising rates, 60 cents per inch per insertion, first page; 48 cents, second page; 45 cents, third page; and 54 cents, fourth page. Foreign annual subscription price, \$5. Circulation, about 3,000.

**Diario de Occidente** (Spanish), Santa Ana. Daily newspaper, widely read in the western part of the Republic. Advertising rates, 10 cents per inch per insertion, second and third pages, and 15 cents fourth page. Foreign annual subscription price, \$7. Circulation, 4,000.

**CHINESE TRADE REVIVAL.**

[Hankow correspondence in London Times.]

**Activity in the Central Provinces.**

I have just returned from a visit to Changsha, in Hunan, where I was favorably impressed by the activity of trade and the excellent order maintained. The port has hitherto been confined to inland navigation, but this season British ocean steamers are being employed to cope with the increased exports. This Province remained undisturbed throughout the revolution, and it is generally expected that order will be maintained. As a proof of loyalty to the central Government, 300,000 taels (\$210,000) were recently placed at the disposal of Yuan Shih-kai.

The spring trade at Hankow has been enormous, as accumulated stocks had to be dealt with. These having now been shipped abroad, trade is again normal and is showing every prospect of a continuation of that remarkable expansion which has hitherto characterized this fast developing commercial emporium of Central China.

A preliminary agreement has just been signed between the Robert Dollar Syndicate and Li Yuan-hung for a loan of \$17,000,000 gold, bearing interest at 5 per cent [as indicated in Daily Consular and Trade Reports for June 11]. The loan is to be issued at 94 and to be repayable in 25 years and is practically unsecured except by the guaranty of the provincial government. It is reported that Peking has approved. The object is the execution of public works in connection with the reconstruction of Hankow native city. It is understood that the syndicate expects large profits from the supply of material.

**NICKEL VERSUS COPPER IN FRENCH COINAGE.**

[Paris correspondence in London Times, June 10.]

M. Klotz, Minister of Finance, submitted at the last meeting of the Cabinet a proposal to substitute smaller perforated nickel coins for the present copper pieces of 5 and 10 centimes (100 centimes=1 franc=19.3 cents) which resemble the British halfpenny and penny pieces. The proposal, which will be tabled to-day in the Chamber of Deputies, contemplates the issue of 80,000,000 francs of the new perforated coinage in pieces of 5, 10, and 25 centimes. Nickel pieces of 25 centimes are already in circulation, but they are not perforated. The object of perforation is to make the new nickel coins distinguishable by the feel from coins of similar size in silver.

If Parliament adopts the Government proposals the value of the copper coin which will be withdrawn from circulation is estimated at 59,000,000 francs. The copper would be used for the future coinage of centimes—the smallest French coin—for colonial coinage, and for the execution of various orders for coins received from abroad.

### PROPOSALS FOR GOVERNMENT SUPPLIES.

[No further particulars are available in the Bureau of Manufactures regarding these projects. Correspondence should be direct with the officers named.]

- No. 714. Alterations in heating and lighting fixtures.**—Sealed proposals will be received at the office of the Supervising Architect until July 5, 1912, for alterations in the heating apparatus, alterations in the lighting fixtures, and construction changes in the United States post office and courthouse at Manchester, N. H. Drawings and specifications may be had of the custodian or from the Supervising Architect.
- No. 715. Steel pile-driver hulls.**—Sealed proposals for building six steel pile-driver hulls will be received at the United States Engineer Office, Customhouse, St. Louis, Mo., until July 19, 1912. Information on application to Charles L. Potter, Lieutenant Colonel, Engineers.
- No. 716.—Lighting fixtures.**—Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until July 24, 1912, for furnishing and installing lighting fixtures in the new United States post office at New York, N. Y., in accordance with drawings and specification, copies of which may be obtained at the Office of the Supervising Architect.
- No. 717. Ordnance supplies.**—Sealed proposals will be received at the office of the Chief of Ordnance, United States Army, Washington, D. C., until July 2, 1912, for furnishing and delivering f. o. b. contractor's works, 1,000 10-inch shells, cast iron, model of 1907, and 600 12-inch shells, cast iron, model of 1907. Instructions to bidders, specifications, etc., can be obtained upon application to the office of the Chief of Ordnance.
- No. 718. Portland cement and crushed rock or gravel.**—Sealed proposals for furnishing about 6,000 barrels of American Portland cement and crushed rock or gravel for Lock and Dam No. 8, Brazos River, delivered at Downs, Tex., will be received at the United States Engineer Office, Galveston, Tex., until July 19, 1912, and then publicly opened. Information on application to Earl I. Brown, Major, Engineers.
- No. 719. Levee work.**—Sealed proposals for constructing about 70,000 cubic yards of levee work, closing breaks in Cairo drainage district levee, will be received at the office of the Mississippi River Commission, First and Second Districts United States Engineer Office, Customhouse, Memphis, Tenn., until July 1, 1912. Information upon application to Clarke S. Smith, Major, Engineers.
- No. 720. Machinery and valves.**—Sealed proposals for machinery and valves for new lock at St. Marys Falls Canal, Sault Ste. Marie, Mich., will be received at the United States Engineer Office, 337 Federal Building, Detroit, Mich., until July 25, 1912. Information on application to C. McD. Townsend, Colonel, Engineers.

### FOREIGN TRADE OPPORTUNITIES.

[Inquiries in which addresses are omitted are on file at Bureau of Manufactures. In applying for addresses refer to file number.]

*Consuls are requested to contribute to this department, and in doing so should in each instance state in what language correspondence should be conducted.*

- No. 9103. Agricultural machinery, technical articles, and rubber goods.**—The Bureau of Manufactures is in receipt of a communication from a business house stating that a Russian concern, the senior member of which is at present on a visit to the United States, desires to form connections with American manufacturers of agricultural machinery and supplies, technical articles, and rubber goods of various kinds. He is also seeking a market for rubber waste. References are furnished, and his address while in the United States will be supplied to interested firms.
- No. 9103. Agencies for various lines of American goods.**—An American consul reports that a business firm in his district wishes to correspond with American manufacturers with the idea of securing agencies on a commission basis for the following lines: Dry goods, hats, boots and shoes, sewing machines, rubber goods, carriages, glassware, crockery, trunks, and jewelry.
- No. 9104. Bids for steamship contract.**—Owing to dissatisfaction with present shipping facilities, a foreign Government will inaugurate a new steamship line within a few months to run between a local port and an American seaport. For local shipping another vessel will also be contracted for, to be not less than 500 tons. Copies of specifications and terms of contract governing both of these matters, which were forwarded by an American consul, can be obtained by addressing the Bureau of Manufactures.
